D-Merry Carroll

Mrs [redacted] (cont'd.) 43.

Born Jan 1804 - at 1903.

Baby in 1804 - now weak since never got over

2nd baby 1807 - lived - & 9

1811 born - after Watson done.

1815 - curdling.

1816 married - lost blood - Curdled in 1810. teeth
& now. Left near home now. now

regular.

W. a st. but at 19. was better. & never robust.

now. cannot sleep - has neuralgia - eat well but
often want. & lets in 3 m. - has pulling & so. but now
had infuen. - Bed weight 8. 2. now. 7. 5/4.

neuralgia - over head & face - in back & very right side
not high & now let face more fatter - sleeps very little
eats & now - . Bowels regular - faeces good appetites

Means realne.?

Dr Forsyth York
Jan 8. 17

~~Frank~~ 48. York.

Bur. in stomach. for 12 mos. - indig. ached
& sometimes bad & never vomit not measured. slept
in back - not shrt. Food. sometime constipation - but
not always. lost a lit. - but not much. sleek nessless -
worries almostra. wa a lit. V. h. m. had long illness about
40 yrs. had 12 mos. a eventally or told me had run
down & had stomach bad got clogged up in stomach a. stuck
readily. man - can do work - not wear. appt. side not not
much today. Bowels. regular - worse. Dr. F. said no bear
but helped the bowels. Tea. Coffee & tobacco - smoke mod.
To. H. York. - m d of cancer. B. 3 65. all living. Married
was to living. 2 d. . . no bad dis.

worse in am. varies - the burning not in bed - not burning
lewest trouble at 4. not a pain - a burning. harts in hot -
may be all day. thro. towards dinner time more severe & better
after dinner. never vomited, felt sick. nostrils red dark
closed..

- 1) Greg. conj. 2) well now, 3) not anxious. 4) tongue furred. 5) abd
not des. 6) skin not dry. 7) Rat neg. by not be felt. 8) sweating
severe. 9) deeper than usual. easily. 10) not in appetite 11) when嗽嗽
dry - probably. ulcer. - 12) deb. 2) take off in 14 carriage. 14) abraded 3 nos
perute.

Bud Spleen.

Sacra-thorac articlitis

Dr Schwartz 28.1X.17
2 Adams Rd.
Hawthorne, N.J.

18 mos ago who walked hard & still in made & back
got worse freq. a few pms & pain in both legs & in his mos-
3. gave up could walk but feels made weak. & had a great
weakness with pers. pain all over. chest down the legs. Sent to
walk for a short time. bad & could hardly have bath etc. then got
worse. gradually. pains & weakness - never so that could not
walk at all. only lying & pain could could not walk. was
in bed 3 or weeks. pain the dominant thing. Pain was
then gone & of moves about. of course deeply rest. State
then kept on & better. Today a year in bed. pain & weakness
for small of back to feet. Pain wakes at night - of never st.
rest not take to it. Then all the time. not in spells
weakness. Rest not take to it. Then all the time. not in spells
has been in spells - at frequent intervals. starting - & hot feel
chief. pain in back & buttocks. but also in legs.. Prod attack is
when could not keep feet on ground. Aspirin helps. Better
calm. when don't walk & never run / get others well
no loss in weight. Eye sight bad - not worse. Legs are thin
now. Today walked over 10% till one - Starts off to it. As sit
there are lot of nodes on internal organs in back.
no trouble with bowels & bladder. No loss of sensibility.
no actual weakness. only the pain... In bed 2 mos off & on.
with the pain. getting in & ray plate.
1 Swelling at right side. 1816 on both sides - 6 mos ago. now of
anything less. Then bigger in od. than now.
2) spleen noted first in Febt 1816 in Balt. Dr Case.

1 Good colour - 2 no emaciat. (3) Walks well but stoops like
the knees - bent. - Has not walked steadily for more than a year - no
swelling of other joints. (4) Marked def. of back - bilateral swelling
over sacro-iliac joint: & the whole. sacral region looks stiff & swollen
there not redness. The swelling can diffuse. nothing special
to be felt - but painful along the archet. in both sides. & also over
the sacrum. all more or less possible but lateral a lot restricted
no swelling of muscles. no loss of sensiti. anywhere. nothing in
gen. sacral nerve. Blood & ur. nom. K.J. diff't get at adni
with reinfarment. Babu, not brach. Found 15. phal.
sister work. of the lower segment of sacrum. The shadow
at art. - sac. l. look normal. & sac bone not involved.
Spleen enlarged. Cut to naked edge palpable.

Spleen. enlarged. Cut to naked edge palpable.

Aug 25 - June 22nd 1917.

27. XII. 17. Treat for 5 months since 1st week in Oct. 1 + 2 times
per day. week. 16 treatments.

1) Can walk better 2) no pain practically. for a month - a dull ache
in back - 3) no compensation can now do everything - was a little after
walking & get pain. 4) - weak & catarrh win - also breathes down
full lungs but no pain. Sleeps well. 1) walks well. 2) spleen still large. easily
full lungs but no pain. Sleeps well. 1) walks well. 2) spleen still large. easily
full lungs but no pain. Sleeps well. 1) walks well. 2) spleen still large. easily

4 fingers br. below costal border of mesial main region. 4) Back remarkable. nothing good. Two pads of fat in
each sacral region & a broad swelling on sacrum. but neither feel like def. tumor. K.J. good. Left knee gone.

Abd. Pain - possible Seth Am.

15-X-17

remarkable case - see Stiles or Edson

G. [redacted] 30 The Ranch Busing. ^{Original paper in his} came in after busing a
stone & it gradually came on. Kept working with pain, every
day, never free & laid up over 6 mos straight off. In bed all
the time - never free. No element could cause it. Food not.
He slept best. Sleeks body suffer pain bad. Walks very much.
(some days. not sleep 4-5 hours or more without walking). 2 A.
Come Aug. not sleep 4-5 hours or more without walking. No loss in weight
up & go about - done no work since. not free from pain
for a month. Worse when up & about. No loss in weight
except at first. Always in upper abdomen. No diarrhea. Not
constipated. No vomiting. Cannot rest in the back for 5-minutes
without being in agony. & terrible when stoop. Must hang out
in a sled but - a bit low. To move at home - in shells last
for an hour. ^{and} Belches round. - does it a good lot. - rolls it
at times.

V. h. before my headache. Good family - hist: 7. f. 65.
Married 15 years. children 3. healthy.

1. Looks painful & worried. not good. - not a very man
2. Abd. a little full in Spig. - diffuse pulsations in Spig., a
bit more to the left than right. - but not excessive (b) wide
spread slight retractile puls in costal borders & & L. 2-3 umbilic
sh. in R side more. - certainly not normal.
- 3) no def. humor (Bell in ballot). The working is worked, but
antra not full. The pain is excessive & the curves of the ribs
& spine is bent at about 2 m. above naval. no def. pulsation
diffuse pulsation but no sharp felt with fingers a deep pressure
over costal margins & it is visible.

- 4) nothing visible or palpable about
- 5) no breast. back or front. is at least ab. seem ~~now~~
- 6) Pal. in peritoneum. No ad. & lit. slig.

30. X. 17 Beevers did a section today. & there was found 1) an unusually small space between the abd. wall and the spine. 2) an adenoma the size of a walnut in the liver 3) no adhesions indicating an Rd after 4) the aorta felt thickened & hard but there was no aneurysm. altogether there was nothing to account either for the pain or for the wide spread pulsation
Now it remains to see the operation per se will cure.

Chronic Parotitis
renaulttis case.

Dr. Cardew. 13.XI.17

Mrs [redacted] 54 Cheltenham

V. h. woman - not strong - rt. fever at 18. heart affected
fever. ~~were~~ children. never very strong. Bronchitis.
an acute ending with after an illness a hard
P.I. began & on 9th ago; the rt par gland swollen & pain & pain
bad & then to the pt a discharge. at first did not discharge now
has lasted 2 or 3 years - worse externally - Dreadfully.吐痰
worse, swell & more & discharge more. - swells up & bursts - now
a runlet on the side - then pt no discharge & swelling go down.
no discharge into the mouth. Pain incessant day & night

- 1) skin of whole rt. hardened region covered with yellow crusts
- 2) whole gland enlarged. Edges across back well defined. It now
in reduced stage when swollen is very big & weeps at first clear & then
a sort of mucus.
- 3) papillae on skin - bit red - no exudate? comes out
- 4) sensation good - very sensitive & touch. no touch most
sensitive to touch.

Musso - Bradwell Tremor.

Dr Braine Hartnell

4. XI. 17

Miss [redacted] 35 Cheltenham

1st noticed tremor 6 yrs ago - shiver - staying with friend who had appendicitis - not in rt hand - could hardly write. Tremor did stop. passed off. - had it on & off & control. 3d. began & has not ceased. more sometimes - always there - stops in sleep - Had in arm on whole. feel muscle cramp - no pain - Had neuritis in other arm - 3 years - had it 8 yrs. & since that time it seems worse. Tremor. all intently year - keeps writing - can feel the little tremor vibration (- elbow

& V. h. g. (2) arm normal looking (3) coarse tremor - large - more or equal a of left or hand int. quiet at rest. but tremor a little & she can feel it. while hand moves. can hold up & move well without much shaking. while hand moves. can hold up & move well without much shaking. small tremor (5) loss of power, (6) no anasthesia. (7) Radial pulse. perhaps a bit smaller than left but diff to feel as the tremor is disturbing. (8) no speech tremor. (9) neck - not suggests of conv. with. (10) Thump does not bass a deep throb. as left int the superficial. spine (11) subit. pulsat. certainly more evident on than left - visible & palpable. - While being measured for a central wt. I have never seen a case like it

[REDACTED] 42 Lynchburg Va

seems played out 'sets up tired can't stand up
& get - feels bad all head. nerve. seems like come out
of poison or m. b. broken down from my heat. & sit. heat
too long". suff little appearance. not at closer view a year
but summer comes all the little appearance is out. of mind.
fever off. this year all of a sudden what they said
seemed the greatest thing in the world: depressed all the
time no energy - not laziness - no nerve. Lasted him
1 1/2 years. In '86 had fever &c. temple pain in back last
4 years. and t. 115. gradually better in '88. - intense suffing.
"want of air account" Then took Rh. S.S.S (no general dis.
got better. grad. till 1 1/2. ago. too last year feeling awful
worn. - wife ill., worries & cares. very depressed & blue. "how
my legs? I have a trembling in my legs. knees tremble
like hard wood. uric acid in blood (or water) another
of malaria. I believe they are just growing.
Fr. 105. terminate not being enter. tobacco none. gained in
weight. Sleeps well - no bad dreams.
has been utterly pumped out in a race.

- 1 Park
- 2 erg. skin
3. g. & s. m.

Well nourished - muscular looking man. Eyes

look a little heavy - orbit a little infiltrated.
Tongue is clean. Pupils are equal - react well to
light. Pulse is regular - tension a little plus. Pulse
recurrent. T. m. reflex active. Apex beat in 5-th -
inside n. l. - No increase in area of cardiac
flatness. Slight throbbing in vessels of neck. In
aortic area a well marked diastolic murmur.
The maximum is at the right third costal car-
tilage - well heard down left sternal border.
Murmur is transmitted towards the apex -
no rumble in diastole at the apex. No pulsa-
tion over the manubrium. No special pulsa-
tion in vessels of neck. Examining the apex
more carefully - when he stoops over it is visible
in 5-th - just outside the nipple. Both sounds are
well heard at the apex - and there is a soft
transmitted diastolic murmur. No distinct
Corrigan pulse. Pulsation in vessels is visible. As a
young man he was a dedicated to athletics - pulled
in boat crews - a sort of all round athlete for

about four or five years. Dr. Bartholomew
20 years ago examined heart and said
he had a lesion of the aortic valve - would
never be any better but would gradu-
ally grow worse. Began hill climbing
and

good deal of
trouble. Was examined by Dr. Louis
about 8 yrs. ago - who said as far as
heart was concerned he might go in
the prize ring. Has passed life insur-
ance many times since.

I-19-05. He looks very well; good color; no anaemia. Tongue is clean. Seven years ago had an attack of gout in the great toe. Radial not palpable. A. b. palpable in 5th, inside the n. l. A. c. f. lower border of 4th, r. s.d. Manubrium is clear. H. s. are clear at a. and b. No accentuation of aortic second. An occasional drop in the beat of the pulse.

~~Hospital~~ Nutritive Valve disease. (Steell's Murmur) 8.20.98

~~Hospital~~ 24. Elkton Va. (Dr Wolf.) & Dr Chapman.
Married 6 years. 2 children youngest 17 mos.
Complaints of heart attack for some time. more
severe last attack of R. - in Feb - all night long, & not
relieved yet. Dreadful cough ^{possibly at 8.}
R., 1st att. ab 10-12. not after 15. 2nd last Feb.
Thought she was well. Before last attack not short
of breath. - Cough better now.
Pain in right lung since last Feb - suffered much with
not slept up much. Lost in weight 95^{lb}. from 125^{lb}.
Pain is in the left side of sternum. is made worse by exertion
Tired, enlarged follicles full. Sleeps with head
high. not bear left side without pain.

Looks very well - color good - lips are not
blue - usually a little paler - no thickening
of the joints at all. Heart's action is
forcible. Percussion is clear in front. Breath
sounds are clear at both bases. Apex beat

is outside the nipple line - forcible - no definite thrill - slight systolic over body of heart. To the right of sternum both sounds are clear - no murmur. On manubrium the second is well heard - soft diastolic. This becomes louder and more intense ^{ward st. clav.} in the second left inter-digital space - where there is also a soft systolic. All along the left sternal margin the double murmur is quite intense - loud over the body of the heart. Apex beat very loud - rough systolic - shock of the first also felt. Murmur is transmitted well into apilla. There is no murmur with diastole below the fourth rib. It is heard well in the sternum to the fifth rib. Systolic murmur is propagated with the greatest intensity

to the back on both sides. It is heard
as low as the renal.

Pulse is full in volume - quite
regular - not collapsing.

sample of heart -- for 5 or 6 years. This consider-
famly well. ^{the smotker feels 1/2 a}

During past winter a con reumat at night able - ^{no pain} -
just givz + sleep. very crisis - allent + heart. start
out of bed with terror feeling as tho death would follow by
upon h. no pain, some criss within the body - in the
element life left. But in Oct. has had
Heart ^{not breathing} ^{very difficult} ^{not} ^{difficult} ^{now}. less frequent. Last part for the number
4 or 5 bad ones. less frequent. Last part for the number

black up in terror - always a reumat about heart - just
has had one in two on the day. Smthg feeling, no pain
would prefer very much. Sc. fever several many years ago - 12
no ac. R. Pneumonia many years ago. not so well. health fade
9. he good until 2 weeks ago. not so well. health fade
at ~~1~~ has been worn in business - worn down.

Heart never violent - feels like hills. For 2 weeks
at night irregular. while crudel as tho heart was bad, fell
weak.

Ends well no anxious - no more tension.

A.b. in 616(?) below nupt - favorable. - a little diff in
size. found a syst tract. end, organ. heart as tight as 4th co
not t sp of sc - nothing in the base. But not ac.
ordered retrograd. m 11/10

11. 6. 99 very nervous, hypochondriacal & depressed.
has had one or a number of the nocturnal heart
attacks - feels anxiousness & as tho there was some
terrible crisis in his life.
Today patient is evidently very nervous and upset.
No essential change in the cardiac condition.
Apex beat is a little outside - regular - forcible.
Bruit is loud - heard in the mid-axilla. The
first sound is heard at the angle of the
scapula - but not the murmur. It is not
heard in the pulmonary area. Second
pulmonic clear. Advised to take mod-
erate exercise - live a quiet life - no sudden
exertion.

1-18-04. In sitting posture murmur is scarcely audible. Both sounds are loud and clear. The murmur is not transmitted; less marked at the apex than I have ever heard it; not heard at the pulmonary area. Both sounds are clear at the base. A little bulging of the praecordia. Liver is not enlarged. Spleen not enlarged. Right kidney not palpable.

X-15-PR. Pulse is regular. A. b. is in. Shock of first well

felt.. Perhaps a little praecordial bulging. Very soft, rather distant apex systolic, of much less intensity than formerly; scarcely audible, except then the breath is held.) No distinct bruit. In the r. p. murmur is scarcely audible. Slight accentuation of pulmonic second. Abdomen looks natural; no fulness in right iliac fossa; no tension; no special pressure; one can roll the head of the caecum and probably the appendix under the finger; not painful; no thickening along the iliocostalis fascia.

Suspected cardiac disease.

~~Scalp~~ Army neurosyphilis

X 1, 2, 00

~~Scalp~~ 44. U. S. A.

Army Board, refer. In Ar 18 years.
Malar, as by oppo in Tucson, Arizona in 86-88, recurred
in 92 adov. coll. severe attack Mexico, '93 same place, in
mean time, Mexican and in Texas. H. Meyer La. 94-97, almost
cured. Parasite, tertian ^{mal. abs. in 98. my aunt found her}. Had Malaria with & peculiar
impulse in eyes for 10 years. History of hard full &c. & rube-
ns th. fever. now pains & neuralgia. Desch. ch. & nodded
a day. No typhus. Went before board yesterday, up for Surg.
In us really, for some months, but sick most of the time. Has
palpation of heart most after eating or. not walk at night.
Her. & high stony. Reg. nor const. Married. 2 child. Slaten
H. Adam. R. I. & no parasite.

Looks a bit sallow - a little anaemic. Conjunc-
tive are a little watery. Pupils dilated. He is ev-
idently very nervous. Pulse is rapid. Good deal of
fine muscular tremor during the examina-
tion. cold-moist hands - cold feet. Very active
skin reflex - rare motor flushing. Arteries are
not sclerotic - no increased tension. Apex beat
just visible - in fifth - within the nipple line. No
shock - no thrill. Both sounds are clear at apex -

first a little muscular - clear in pulmonary region - perfectly clear at base. No cardio-respiratory murmur. After exertion (rapid movement of the arms) heart acting very rapidly - 36 to the minute quarter. Soft systolic bruit at apex in recumbent posture - no thrill. Two minutes later in recumbent posture aperituit is gone - and the pulse is at 96. Cardiac flatness lower border of fourth within the nipple line - and at left sternal border.

Pulseation in abdominal aorta, which has been very marked for ten years. It often produces a sensation of faintness.

Abdomen is flat - natural looking except for the increased pulseation of the ab-

Abdominal aorta. Stomach tympany
is low. Slight gastroptosis. Right
kidney easily to be felt on deep
inspiration. Edge of liver just
palpable on deep inspiration. Area
of liver ~~bulges~~ flatness not in-
creased. Edge of spleen is easily
felt on deep inspiration - descends
about an inch below the costal
margin - is firm and hard.

Multiple Telangiectas.

Dr Anderson.

X. 28.10

~~H. S. H. M.~~ (wander name Bell) 357 m. schen.

In the family. - father. no others. 1 b. s. died of diabetes.
Lasted about 6 years. Epistaxis. more from nose than mouth. Face spots - a
many in lip, & tongue. - from which she has not bled. . . Mother assumes the
m. says further addams. Father died of pence & endox. after but had
hemorrhage. white face in mass of telangiectas.
Spots about a half - now bleed since a baby. - all life. Had few
much worse. when young. - better than now - for a week will bleed
very dry & then for a month will not. - now muscles plused. not any good
. Has been cauterized. Sprinkle - mac McDonald - - did not good - but always the
tendency. Doctor did good. 5-8 op's - never bleeding: in bed.

Med. sized woman, marked palor of face. The presence of
many navi in lips at once attract attention, they are of two kinds
small - superficial bright red telangiectas from 2-4 mm in
width and larger bluish angina which cause the mucosa
to project. There are three or four of these of 10-15 mm in extent
(2) on the tongue are half a dozen small navi - two of good size
then an arm or the buccal or pharyngeal navi. (3) When I find a has
on cheeks a dozen or more chiefly small. There is one of 3 mm in
extent just on ~~one~~ end of the ridge of the nose. (4) The mucous
mem of the Septum in the lower half in both sides run over & with
a thick scale of crust of blood. She had bad bleeding two days before.
no angina were visible. (4) on skin I found a few scattered
purpleish bluish, one 2-3 mm wide. the others of one nail
nothing on skin of body. . . skin not pale. nothing in blood.
in skin.

(Army Rejection)

~~Dr. J. H. [redacted]~~ . 23 West Point. (full failed Surgeon USA)

Rejected yesterday by the Army board - at the physical
examination for "emotional heart".
W & S. no illness since childhood. Mal. when 8-10. No
ac. Rh.. Athlete in moderation. Smoker - but in moderation
as regards... Not cons. of any heart trouble at all. never knew
until this Board rejection. - Sent to me by Dr. Reed for examination

Healthy looking - tongue clean. Muscular -
well built - height about 5-feet. 9 inches.

Pulse is quiet - 72 to the minute - full
in volume - tension moderate - readily
compressible - vessel wall not sclerotic.
Chest is well formed - no are of abnor-
mal pulsations. Apex beat just visible
in fifth interspace - below and inside
the nipple - not forcible - no thrill - no

increase in the area of cardiac dulness.
Heart sounds are clear at the base -
aortic second not ~~accentuated~~ intensified.
Sounds are clear at lower
sternum. At apex a well marked
cardio-respiratory murmur during
inspiration - generally two-puffed -
with each inspiration - which is syn-
chronous with the heart beats - then two,
sometimes three beats without the
cardio-respiratory murmur. When
he holds the breath no murmur -
at the end of deep inspiration no
murmur. At the apex there is a
regular rhythm - two beats during
the height of inspiration - associated with
a puffing murmur and then three - sometimes
four beats without. It is heard round in the axilla.
After exertion the same rhythmic murmur a little
more intense - no murmur in recesses of neck - no
murmur in subclavian.

Post. typhoid phlebitis

D. F. H. - operat for osteo
nephritis

~~John J.~~ chester town md (Dr Simmons)

Ill for 3 mos.

18 mos ago typhoid fever. fever, severe. came after
it. Hand & swollen when had the fever. I laid by for it
In course often mouth could get about. In 2 or 3 mos
well & healthy - used shells & a drug. swollen & heavy.
More at night no pain except when ill. Now has
(in see) begun went to doctor who said he could
cure him... no good. Balled him... Dr Muller operate.
for osteo-nephritis. no pains. Bad stomach. colds.
In last 5 wks after operat. could not eat. Left feet & for
2 mos turned & could not sleep; feet, now worse self
still.

Healthy looking man. good color. Tongue is clean.
no tophi. Pulse is good - regular. Left leg a little
uniformly larger. There is now very moderate
enlargement - no edema. Pulsation in
the artery is well marked - no definite cord
in the vein. Distinct slight enlargement
of the superficial veins of the thigh. Skin

reflex is very marked. Abdomen is full -
nowhere specially tender. Spleen is ~~en~~
not enlarged. Liver not enlarged. Heart
sounds are clear. Apex beat is in good
position - no increase in area of cardiac
flatness.

Mr. Stay is positive that when he went to G.
Miller's Sanatorium he had no pain at
the head of the tibia - nor any swelling.

Tuberculosis
+ asthma.

Preston Brightin,
July 11/10

~~11 J St. 55-~~

after pleuroy + asthma period all of asth. see you. died at.
and we grew up. all this life rev. - coughing. colds 2-3 yrs. Jan
'82 - br 14-5. very life & p. at end partner. more than ever. + after
3 yrs a new ptm. Jan 1900 had influenza. left chest. cough very
violent. Follow symm. Tub. was diagnosed. bacilli in sputum
then 3 mrs. now reg. 1901. small of b. Ticks up until 1901. Then
had to give up food. Had lost 14 lbs. sputum found in neck &
spoon loaded cough. never real sweat.. and then in seven years
had occ. small hemorrhages. was from the to end 1905 and
neph. year by year. went about. began to take exer. self. &c. Then
about 1906. all in face. last 14 ft b. 1906-7 very little wife
ill + died in 1907. cough + hoars. + all being money. Kept well
then 1908. at home + nothing worse. + except me own had a slight
hem + a little one after. 1909 spring began so about + at last
busted with carb. with idea of marriage. Dr. said that it was not
heart - but more & less self. + feel better same time Nov.
1910 7 br. + over then Dec + Jan. then about a coughing. + in
way to So. N.Y. + saw Colman (L.C.) who saw sputum in + a few
bacilli - again Jan a few. very bad. Feb saw Dr. Colman. patches
in lung + dilat. of rt. heart also liver enlarged. - the b. aching then
nothing. etc in mouth bacilli + in April better. + able to walk a few
hours. Had increased in weight + asth a very weight. Saw surgeon

said "I was one. cardiac dilatation," & lay down. He said it never stand, it gave me pain & marned life." French Dr. X-ray work & result in confr diagnosis & French man pleased with adhesions so he left early. Mat. reported. P.S. same home not so well. 2nd of breath & going up stairs and palpabilit. at night. Heart thuds &c. cough & expect. at present. In former cases T.b. has read another spout now not much. - don't like weight round chest with them. Stand & walk easily.

Healthy looking man, good colour, well nourished W. about 12.1. Pulse regular, good volume. Arteries not sclerotic. Chest is well formed. A little shotty enlargement of cardiac posterior triangle more on left than right. Clavicles are equal no depression. Tideline bears in line of diaphragm. Heart is large, rather barrel shaped. Expansion slight. measurement right $14\frac{1}{4}$, expansion under an inch. Left $17\frac{1}{2}$, expansion about $3\frac{1}{4}$ in. Overbeat not visible; no pulsation in cardiac area or to the right of the sternum. Flatness above left clavicle. Impaired resonance to the 2nd rib, in fact all the way down left side is less clear than on right. Above clavicle q. b. Breathing sounds scarcely audible. Below in an expiration of equal length barrel tubular; a few slight crackles of induration; louder towards the sternum; intensified by deep breathing & cough. Expiration thus quite emphatic to the right upper lobe in front q. b. Breathing sounds normal, relative intensity, a few crackles over the sternum. Behind striking difference between last two lungs in quiet breathing to the left. No more feeble than the extreme base. Spiration scarcely audible. Numerous crackly rales at apex. In recumbent posture no definite a. b. visible nor palpable. Absolute cardiac flatness right sternal border middle line, top of 4th rib, very low over left half of front of chest. Liver edge is to be felt just 2 f. b. below costal border. Spleen not enlarged.

Sputa bloody since the middle of July. -

She looks well; color good. Tongue is clean. Chest is well
formed; costal angle good. The supraclavicular spaces are equal.
The right clavicle is perhaps a little more prominent than the left
and a little less motion right than left. No increase in the fre-

itus on either side. A little higher pitched note at the right apex; extends along the sternal margin. Clear at the left apex. At right apex in front the heart sounds are loudly transmitted. Expiration is prolonged. A few crackling rales, not specially resonant, best heard along the sternal margin and as low as the 4th rib. When she draws a deep breath they are more marked. The rales are fine, crackling, not resonant, and the breathing is not cavernous. On coughing the rales are distinctly crackling and behind slightly resonant. Behind they go almost as low as the angle of the scapula. Clear in the flanks on both sides. H.s. are clear at a. and b.

~~Itamukhi, Bengal~~

In India 28y. Itamukhi. had fever 1st in '85. severe attack came home. ill for 4 mos. & 1 well. never again. Dyester $3\frac{1}{2}$ years ago acute attack last up some days, 12-3. much blood & mucus. So was it came home. 4 mos. Other well. P. D. fever Mo in 6 or 8 mos. began mo of T. in eve. to $102^{\circ}-83$. nothing but the fever. but fell ill last for 11. 7. to 9. 6. mo to 81st was well in Jan. began went into cant tell may. had fever then but not incapacitate. went to Simla for a mo. no good. went to Maghabpur & rest there under treatment. spleen not enlarged. a doctor he said that also liver also not said no. Besides pleurisy in not lungs. Mo in 3 years. Cough with it. of a warm day all night. When fever from pleurisy 3y ago had some fever. Pain in chest. Cough for long time - as long as the pleurisy. None of late - not more. still at very little - Sputum nothing in it. On Aug 29 well to aden. Fever for 29th. good appetite.

Good colour. Tongue clean. Pupils equal, react to light. No anemia. Pulse regular, a little rapid qd in sitting posture. Chest is long, thin. Spaces well shown, equal on both sides. Expansion a little less on right than on left side. Lower right spaces a little less distinct, hescicular, the 8th & 9th in middle line. No tenderness on pressure on either side of the chest. On the right side clear along the sternal margin. Flatness begins just below 3rd rib in nipple line extends out into the axilla. Upper end of

liver flatness is an 6th rib, lower border.

From behind both sides look equal, right perhaps a little fuller than left. Intershances are well shown. Percussion is clear behind until one reaches the outer border of shoulder blade, then flatness extends into the axilla. Air enters well freely into the base of the right lung. In the axilla outside the right nipple there is a well marked friction, after coughing a few well marked crackling rales. Heart sounds are clear - apex in base. Abdomen is flat, natural looking. Spleen not enlarged. Liver edge just felt. 2 fingers breadth below costal border. Glands not enlarged.

Sugar 2 years ago. $2\frac{1}{2}$ p.c. Last summer went to Castle Hay,
only a brace then ($7\frac{1}{8}\text{ of } 1\frac{1}{2}$ p.c.). Broke down this
year. (2nd neck) nervous. attacks. Had intermittent pulse
attack. Wore in Nov. slight trace then. (Dr. Da Costa)
nervous & indigestion - whole left side - & stern on the left
shoulder. In 82. carbuncles - not really. No pains in
leg. Stiff knees - for years. Mother & brother seemed
never passed large amount urine. -

Healthy looking man - color very good - no
anaesthesia - tongue clean - a patch of pig-
mentation on the inner angle of the
right conjunctiva. Pulse rapid - 116 - low
tension - vessel not sclerotic - easily com-
pressible. Knee jerks present.
Bhest is well formed - no throbbing in cer-
vical vessels - or in sternal notch. Liver

dry - scaly - patches like psoriasis on trunk.
Apex beat not visible - not palpable - slight pulsation in lower sternum. Percussion on manubrium clear - upper limit of cardiac dulness about 4th - does not extend beyond mid sternal line and just within nipple. On auscultation both sounds audible at apex - soft bruit with fist. Heard along anterior axillary fold - well heard in lower sternum. At aortic cartilage and over manubrium it is well heard - not rough - propagated into vessels of the neck - Second sound is clear - not accentuated - no tracheal tuggering. Heart sounds are transmitted to the back - the bruit is not heard. They are loud in the left infra-scapular region. Respiratory sounds are clear.

Abdomen = Scar of a carbuncle just at left of navel - edge of liver readily palpable below costal margin - Spleen not palpable - no tenderness over pancreas on deep pressure. Superficial area of liver dulness diminished. Neither kidney palpable - no pain on pressure over the renal region. Outline of the discs a little obscure on left side - no retinitis. The patches of pigment are on both ~~eyes~~ - on both sides of the corneae - symmetrically placed - beginning about 2 mm. from the

edge of and extending about 5 mm. in the transverse - and a little more in the vertical direction. Those in the sclerotic are blackish brown in color - the inner ones are the most extensive. About the one on the inner aspect of the left eye - and the outer one on the right - are a few little yellowish fatty bodies. The pupils are of medium size and react to light and on accommodation.

No ab.

Order T. n. v.m.

Jan 14, 95. Pm side cultures - negative on exam
To table Suratoga only.

Pulse not so intermittent .. Color good

June 6th - 95; Pulse 120; otherwise condition is good.

10. 16. 95. None has been high culture. Sugar last month trace
Has pain in back. does five sit. 6 or 7 lbs lighter. To go in well
the other.

Oct. 24-1901. Pulse 120, practically the same as it was in 1895. Apex bruit is louder—a little more intense. General condition is good. Within the past ten years a remarkable pigmentation has developed over the molar regions on both sides, and the pigmentation on the inner surfaces of the ears has increased extraordinarily. No increase in the pigmentation of the conjunctival. It is a pigmentation that is black—not brown—so that it looks like the black of black-heads—but it is in the skin.

Oct. 10th, 1902. Large, full pulse, quite regular. A. b. in fifth, not specially forcible. No pulsation over manubrium, visible or palpable. Rough, wiry systolic at apex. Aortic second is clear. The systolic is propagated into vessels of neck. No pulsation above the sternum. Marked throbbing in both subclavians.

Dec. 4th, 1903. His pulse is much more regular, only an occasional drop; very good volume. The a. b. is not visible, not palpable. Cardiac flatness just at the nipple line. The same sharp musical bruit at apex and along left sternal border, well heard at aortic cartilage and transmitted into the vessels of the neck, very loud in sterno-clavicular; no murmur to right of sternum. A little more stiffness of the joints.

X. 11. 04 . For a year very good condit. tec. yslh. of health. last year over the heart 4 or 5 key comp.
Bland & same. No bad attack since left Hospital.
This

The pulse is regular and full; the beats are longer, but the irregularity has disappeared entirely. The color of the lips is good; color of the finger nails good. The hands and fingers are distinctly more stiff. A. b. not visible, not palpable. The same wiry systolic bruit at a. and b. Second sound is clear. No signs of enlargement of the heart. The systolic bruit is not propagated

into the vessels of the neck; heard loudly over manubrium. There is no pulsation in the second right. The aortic valves close cleanly. No flatness over manubrium. No flatness outside the n. l.

1401 LOCUST STREET

PHILADELPHIA

January 18, 1895.

Dear Dr. Osler:

The condition which you describe in your note is usually called melanosis sclerae. It is sometimes symmetrical, sometimes not, and I think more frequent in the upper portion of the sclera than in the region which you describe. It is a congenital fault almost always, I think, although somewhat similar patches occur after one or two of the inflammations which attack the anterior portion of the uveal tract. If it is congenital, it is due to a process which I believe the Germans describe as "natur-spielen." You will find a very good account of the condition in Graefe und Saemisch's Handbuch der Augenheilkunde, Vol. II, p. 117, a somewhat poor account in Picque's Anomalies de Developpement et Maladies congenitales du Globe de l'Oeil, p. 168, and also a modest reference to the same in that epitome of wisdom which the child of Satan has purloined from your office. A copy of the latter is now speeding its way so that the jewel may be restored to its crown.

Yours sincerely,

Graebe

Superintendent.

Baltimore,

November 10

1896

Analysis of Urine

The urine has a distinct yellowish or dark brown smoky color, with a slight hazy white precipitate; no special odor to be noted; reaction is markedly acid; spec. grav 1025. The urine on standing has deepened in color.

Chemical Examination -

Urine contains a very faint trace of albumin. Fehling's Copper solution is reduced in a peculiar manner. It is first turned an inky-black color and on further heating a reddish-yellow precipitate is thrown down. The urine is optically inactive and does not yield CO_2 with the fermentation test. Negative also for sugar with the Phenylhydrazine and Bismuth tests. No diazo reaction. On the addition of KOH solution the urine becomes a deep brownish green color on standing, this color extending gradually down through the column of urine.

Microscopic Exam -

Few hyaline and finely granular casts; cylindroids, numerous epithelial cells and an occasional pus cell. Few oxalate of lime crystals.

N.B. - Am endeavouring to isolate the crystals of the homogenetic acid.

J. B. Fletcher

Gettysburg Pa. (so I think)

Complaints of heart trouble

Couple from England few or years ago. very severe.

Had been up. Could be moved or handled. Barn kept in bed.

bed sure. in bed.

8/23/19 10:30 AM - 5:10 PM

Possibly a *neurritis*. Had to have the leg elevated by Dr. Gordon.

Rh of spine - forays - over bed were a dead aching

fair. Reefs for sleeping.

Heart trouble 3 mos ago. first noted. walking alone walked

fullerenz. an attack one night. Had black numbers
" 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49 50 51 52 53 54 55 56 57 58 59 60 61 62 63 64 65 66 67 68 69 70 71 72 73 74 75 76 77 78 79 80 81 82 83 84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 100

In home for 4-5 weeks - shirt great when walks -

Does not feel barky - sub well - sub sleek & smooth

Looks very well - well nourished - walks with a limp - leg is straight - but knee flexed. Pulse is 92, medium tension - medium volume - not collapsing - easily compressed. Apex beat not visible - not palpable - diffuse impulse in fifth.

Sounds are clear at apex and at lower sternum and at aortic cartilage. First sound only

10/29/98

nothing in the chest & am. no.

heard here - a little accentuated. No abnormal areas of pulsation. Liver not enlarged - spleen not enlarged - lungs clear in front.

Very large bed-sore on the back - down to the bone - covered only by scar tissue on the sacrum - another one just under the fold of the gluteus.

This man has had pains on and off for fifteen or sixteen years in the back - so that he has rarely ever passed a night without having to get up and rub the back just about and above the scar. Evidently now his condition is largely one of neurasthenia due to the prolonged pain.

His right leg is entirely cold he says.

Wrote to Dr. Dickson advising active counter-irritation - the wet-pack - and large doses of strychnine.

Eopthalmia goutre.

5: 2. 95~

~~John H. [redacted]~~ 22. 10 17 A chas. - from Dr
Perry. U.S.A.

Nervousness - chief compl. & headache - stomach.
Heart. Came on suddenly ^{3 years ago} & felt as if died in insane
no ill in family. asylym. a few
never very strong. slim. delc. always nervous. off.
when 15 years near - situated. Now no use of eyes. cannot
read for more than a few". headache.

Skin dark. Hair & muscles much worse. 16 x 1 & few
spider - ex. Dryness of throat & mouth. weight 350 lbs.
eye larger. prominent. Throat. ^{138 lbs.} lost him a
few weeks. now 118.

Heart action rapid. nose blocked. & scabbed cut out
compl. some growth.

Pulse 38 to 40 beats. Tremor. marked. in hands.

Thyroid large. pulsated from the larynx at upper angle. and
evident - but irregular. & as low as 2nd rib in sternum.

Heart throb much. forcible action

No stellwigs sign - no grape sign - not gouty.

Eopthalmia very slight..

Has not had the Thyroid & or Perry suggests it. not better and

Labyrinthine Vertigo.

6. 13. 95.

[REDACTED] 49. 404 Column 51.

(from Dr. P. Randolph)

Vertigo - Le tournes. 1st attack everything turned.
Followed by terrible nervous prostration.

1st attack 7th ago. stood in cor. of street. turned suddenly
feet dizzy. Obj. moved. all night all. before 9th am. Sudden
falling out of bed. hours on opp. street. looking around thro'
mind. Then had another. 3rd after - quite well meanwhile.

Then next all day last Xmas night. Sitting at table
looked to left & turning head back. Head began to ro.
Della & I lasted 1 $\frac{1}{2}$ hours. no prostr. no vomiting
sweat. Della & I lasted another. severe. about 3 hours
no nausea. In morn. 1³ it another. severe. about 3 hours
came in in washing. sloshing. felt poorly from start. Head
lyings down by. kept going for a hour. all. Pale - ashy.

Column. slight cold perspiration. April. 1st another. which
was lasted over nine. intervals. One 17 days. June
of the all. bad. Easter Morn. could not say whether he was
walking up or down or sideways. Had to do so him
self. as location idea at all. perfectly
numbed all night. Had to go up on hands & knees. & had
to be directed wh. way to get in. very prostrated
after it. & mind travelled like Royal Blue. could not
control mind. no sleep. no snore. very disturbed

Jade. for 20 weeks. no fat pelalm at. least. on manure
Had been going about more, falls. now trouble ⁱⁿ looking.
from H. b. & a cold back the head is unsteady. & light
weakness in legs at times. lost in weight. 15 lbs. - 20
by diet. No Roaring ~~sounds~~ with 1st attack. ever since the
~~last attack.~~ constant, in rt. side, like chugging at times
P.H. Active man. never tired. No over work. Tired worker.

Ears trouble six years ago. i Haslam thought due to
goutine. after gripe. Freed from it. The roaring
is always worse with the attack. or if he is very nervous.
Cold feet & hands. & cold chills - week before last.
began in feet.

Digestion now is good..

Had an attack of Kidney colic. about 1st. Child from
hypoderm. lasted 5 hrs. - & after return to cushion
had rest.

Healthy looking man, iron - grey. Pupils
are equal - react well to light and on
peripheral irritation. The tongue is
clean - pulse is steady and regular -
vessel not sclerosed. For condition of

To Nitro - gly. cold pack -

eyes and ears see Dr. Randolph's notes. Hearing is pretty good for the watch in the right ear.

Heart sounds are clear - no accentuation of the aortic second.

No dilatation of stomach - liver is not enlarged. Spleen not enlarged - Knee jerks are feeble.

7. 3. 95.

- Traumatic neurasthenia. -

Vertigo. Edema of ankles

62

Jr

██████████ 1204 N St. Washington

Feb. 9th, 1895. Cut head & forehead inc. 3 hrs. after run over - shaft ran tho. coat. - & dragged. Dug at base of brain. Dizzy when turning in bed.. streaks like Ele. thro. brain. Slip 6 weeks. Then relapsed. In bed most of the time. Urinates 3-4 squirts. Headache & increase in size of the urine. Several relapses. Dizziness a wave into brain ^{now} could move about ^{now} brain by ^{now} few weeks say between 2 feet. Hair all in cerebellum. Few weeks say between 2 billions. T. in mouth. not above 98°. Even since vowels regular as med. no loss in weight. Gain 2 lbs. (Dr. Bull N.Y.) reduction from caused increase in pulse. never below 100 - often 110. When it attempts to walk had a dazed feeling & walked stiffly with head. Dug it out & is relieved of it. Pressed on ^{now} foot ^{now} hand ^{now} without any question. Massage caused has recd. ^{now} without any question. Massage caused feeling like lumbergo - stiff & if sit down gets up - stiff when step down because far below a pain in spine. Now not dizzy - very little. Now high pulse - no effect. Now not stiff - very little. Now has a little stiffness in ankles - & stroph. & acute. Now has a little stiffness in ankles - now slightly swollen. Gen. health good. Tongue clean. Liver bowels healthy.

Pulse in colon good. Pupils equal but dilated & med. red. arteries red. No ripples or tinglings. - no ripples of R.I. No sensory changes.

no sensory disturbances - eye grounds clear.

no changes of note anywhere -

~~soft~~ Pupils normal. -

Snd clest. fresh air. - - & no medicine.

Urine clear - no albumen - . Normal in quantity.

~~J. H. M.~~ Iron master 30 Harrisburg. Pa.

F.H. M. Cancer, 40. F. u. w. Not married.

Course of nervousness. In summer.

18 mos ago. had a frost at night. - & deprieced easily excited sexually at times. Last S. & W. & thus S. had a new feeling not fear not depression. Kind of cerebrum. of ready get thinking phrenet. in attention something wrong. Thus summer set in acute. but if fewer. About a m. ago. felt some like a scared feeling. felt about heart beat fast. lastly 2". 2 nights after again, more more marked, in waves. Then thought I may have a seizure - no sweat. & meat. no pain. Troubles bear 2 days. & th. after saw or thought to. 2 weeks ago again while in walking room. in day light. an unusual feeling of fear. - apprehension. not anything scared. Rider bicycle - & takes exercise. a much the same thing but slight - not sure. In the last year. noticed kind of started feelings. of doing - get a start even in day time.

Smoke up - a little - about a month.

Smokes well

R.I. 4 a.m. ner. & restable. no symptoms

Ordered. wet. baths at night. Bromide. & Nux. vom.

Nov. 25-16 Better at times. still curious feelings like uneasiness
× low spirits, no so much dread & apprehension
not errors.

Is M. steadily on 3 weeks. ordered by X of Tenth Regt for
the 2nd

3. 25. 57 well last winter - good spirit & mind - but ringing in
ears. In 8th. not so well. In Mar a cold. after back
a month worse & in July away for 2 weeks. all right in 2 days.
In Nov worse than ever. Don't for 3 months. not back a day
before bad. occas. well but owing to ears. Depress & blueness
scared feeling. often at night. sleep not so violent but started
longer. 10". Real fear. little loss of sea sickness without the
nausea. What opinion of it kind gallbladder. Feels sometimes
as if he was too well. Sleep well. Colon good. - at work.
"Solf & assist to marry"

Henoch's Purpura.

AB

~~Aug 18~~ 27. norfolk va.

Couple of cold feet & after 2 or 3 days pains in stomach & a fever & in the m. or next day the bowels move 2 or 3 times. Attacks for 6 or 8 years used to have 2 or 3 times in succession.

Cold feet all the time - 2 or 3 days before it comes the ice cold feet & stomach moves.

Stomach - gripes - vomiting - not colic. - of course the seed - always in center - sharp. sometimes double up or upper int. pretty bad. no mumps. &

Fever with the pains - by the time he gets into bed.

7. last ~~at~~ 6 - 10 hrs. never look t. Talks all sorts of nonsense like in a fever. Imag. he has 26 tumors & 26 stomachs in a row &

Pain in back right side - terrible indigestion always in the side.

Had great big liver spots all over him. Thought at first he had been unprovident. First one 8 years ago. Will go 2 or 3 months without, & then 6 mos. Has had them every two months.

Blotches began on arm & neck & then on stomach 1/11

18

Sometimes as big as palm of hand. Now or 11/2 or 2 years
never not in leg. Sometimes dark brown - never
white.

No pains in joints - no swelling. No trouble
in the family like it.

Medium sized man - looks pretty
healthy - perhaps a little pale - Tongue
clean - gums not swollen. Pulse is quiet.
Examination of heart and lungs nega-
tive.

The abdomen looks natural - is not
swollen. On deep inspiration the edge
of the spleen is distinctly palpable -
area of vertical dulness five fingers
breadth. Stomach is not enlarged -
Liver normal - no increase in size.
No spots now on the skin - no oedema -
no swelling of the legs - no swelling of
the joints.

Pains in chest - pleuritic character

12. 12. 95.

[Redacted] in 48. Wilmington Del. (from Dr. Hussey)

Compl. of lungs - pains in shoulders & sides & lower part of hips, thro' the breast. - hips to neck. Lasted. - since last February. Began acutely - but cannot fix the date - first pain thro' the breast bone & the right side. Pain worse in early am. & late day & night. Keep awake. so bad the perspiration. Pale & cold at times - feel it coming up in face. Palpit at heart with it. Pain never specially at heart. Pain always same nature jumps about one side to the other. Slacking pain in chest - even jump with it. Loss in weight - not much - except in abd. 169 now 159. Liver abd much irritated. Today 160.. not losing appet. good. no nausea no vomiting. No cough. but says continually. in throat. Yesterday in digestion - Advert. since 1882. - bit of hiccups much pain in passing - pain in stomach. 1882-3 had it for a year - reduced to 5 Hobs. Indigestion 2-3 am go to w.c. 4-5 dry times until 9 am. pain in stomach & bowels. Pass little ball after well in 8:30. well no jaundice. - all gone but a slight one & again yesterday.

P.C. Well nourished man - grey hair -
panniculus is everywhere well preserved.
Pupils are equal - complexion a little
sallow - color of ears good - color of lips
pretty good - tongue is clean - mucous
membranes of mouth good color. The
neck is unusually broad at the base -
clavicles not noticeable - supra-cla-
vicular spaces look full - broad on
left side. Supra sternal notch is full.
This fulness is largely due to the fat.
Perhaps the lateral processes and tis-
sues in the neighborhood are also a little
prominent - no distinct individual
glands are felt. No prominences on chest
or on scapulae - no pulsation.
Apex beat faintly visible just below sup-
ple. Draws a deep breath without pain,
pretty equal - ~~left~~ right side perhaps
a little ~~less~~ more than left. Breath

sounds are equal at both apices & in front - a little distant and muffled on quiet breathing - not very full and clear on deep inspiration - no adventitious sounds. They are well heard in mammary region.

Heart sounds are clear at both apex and base - no specially transmitted to axilla (?) - first sound is well heard at manubrium. There is no tracheal tuggering. Expansion good behind - at left base a little flatter.

The seventh cervical looks very prominent and broad - no tenderness - no dulness behind. Brackling - perhaps pleural-rales at the left base behind. Tactile fremitus is well felt on both sides. The pleural sounds extend around the heart. The abdomen

is natural looking - soft. The gall-bladder is not palpable. Examination of the abdomen negative - examination of rectum negative. No enlarged glands - no epididymitis.

Ordered the iodide of potassium.

12.7 98.9 A day very well and Pains on & off, not worse but cannot stand it - recently down a stone - In sum pain gone. Stomach 179, able to attend to work all along.
Remarkable circumstances of these since June or May hundred grm dissolved & full - no swelling papule or froth Mila has seen him - or 7 days inf 2 cases he has seen

Barttinis deformans

Mental value disease

5-16-86

~~Aug 3rd 1886.~~ (S) (Father suggested at 4).
Hagerstown. 33.

coupl. of heart trouble - has had ruffness & asthma ..

P.H. no Rh. sc. measles. no typhoid. When 13 or 14 had 8th month & fainting. Ideas had at that time laid up in bed, has had swelling of legs. Has had to get up at night "walk half the time". Wheezing cough very bady - when young.
F.O. no h trouble, consumption, anæmia and rheumatism. L. & r. l. br. 15. 16. d. c. unk.

a. br. few wt. much h. a. l. - no trouble in path. Should of 1st marked. L. and. very tol. soft syst. 8th of it very weak. pul 2nd accent. no mur in a or h. reg. -
Lungs clear.

To rect. To neck bronch. T. little dyspepsia
To me Digitalis. My X- 15 d on wages in each month.

Cancer of stomach - severe anaemia -
Remarkable double murmur just June 6th - 15%
alone apex.

~~James D. Thompson~~. 64. 18 E Lawrence st. (or Baden

Couple of mdy. dyspep... when eat distress
would throw it up - bowels got to make a terrible
noise. and enough to be heard across the room. Not
that on May 1st. Pale since 3 or 4 weeks -
Is a dyspeptic. In 1871 sick reduced to 108 lbs. pale
then. - no severe - at business ever since. Had hem of
bladder for month to Oct - 12.4. ago. No urines
lost. in weight 5- or 6 lbs. 120 now. 2 months ago
115.. 125 is ord. weight. Vomiting after food.
In abd. in lo. bone. not much gas come up.

Looks a little pale - not very thin - fairly
good musculature. Face has a yellow
pigment - marked on the neck - Tongue
is clean - Anaemia is quite marked.
on conjunctiva and on face. Pulse is
full - tension good - forcible pulsation
in the peripheral vessels - rather sugges-
tive of collapsing pulse. Marked oedema
of the legs - skin thin and glossy. Throb-
bing in vessels of neck and in sternal

notch. Apex beat not distinctly visible. Visible pulsation in superficial mammary artery - Mambrum is clear. Systolic murmur at apex - not very loud. Soft systolic at aortic region - second is clear. Below the fourth rib a well marked double murmur on left side - systolic soft - diastolic quite distinct. Heard also at the apex - is not heard at pulmonary region or at aortic region or down the mid-sternum.

Abdomen is full - natural looking. On inspection a distinct tumor in the left half of epigastric - extending into the left upper quadrant of umbilical region. It descends with respiration and becomes much more distinct. It has an excursion of at least two or three fingers breadth. At intervals it becomes more prominent - particu-

early just to the left of the navel.
The throbbing of the aorta is com-
municated to it. On palpation
in the parasternal line about two
fingers breadth from costal mar-
gin - there is a nodular body - a little
tender on pressure - and it is that
which one can see moving up and
down with respiration. To the right
and on a level with the navel there
is a second nodular body - not near-
ly so distinct - not so large. No en-
largement of the glands in the groin
or in the neck. Spleen is not enlarged.
Liver is not enlarged. Well marked
Litten's phenomenon. Intumescence of the
abdomen - deep seated - feeling as though
the glands were enlarged.

Died about 3 mo after Dr. Baker

Scleroderma

6. 16. '86

Mr. [redacted] 49. Savannah Ga. Dr. Carlton.
7 ft. 8 in. F. d. at 73. M. l. & well. B & S. w. & s.
Grippe in Oct. 85 - bad. worse at. a hard to
keep up. Rheum. muscular. felt for a month. Shaking
him a little in rt. foot & ankle. acute aches. Lasted up
several weeks - yielding under cold & K.I. Compl of
gt. weakness & could not get up & move about; pain swelling
& heat of breast. Suffer pt of pain in event & things. Now
got better & R. but general cond did not. This spring
was better - now is weaker - at times better at times
worse. Shakes hands & shudders of breath. particular
weakness; swelling of feet. In am. with malacia mnl.
PH. well & st. not robust as bg. good teeth, no venous
diseases. Tym. pressure at 13. very severe. His last for 175
to 185. Has been a pretty heavy drinker - has
been free eater.

No pains in legs now, no mental symptoms. No pain
in hands. Never had R before Oct.

Face looks natural - lines on the forehead
show well. Fibroid induration on fore-
head attached to periosteum - nodule the

size of a pea - where he had a bit of brick
lodged. This has undoubtedly grown larger.
Lines about the eyes show well. naso-labial
fold plainly seen. No tophi. Skin of cheeks feels
a little parchment-like, - particularly just
above the naso-labial fold. No trophic
changes in the hair - skin of neck is
natural. Skin of chest becomes very hy-
peremic on exposure - no thickening
or induration of the skin of trunk.

Arm - no involvement of the upper arm -
skin perfectly natural. Forearms look
normal - from about half way down they
are decidedly hide-bound. The hands are
congested & no other trophic changes.
Skin of the back of the hand picked
up with difficulty. Skin of the fingers
is entirely hide-bound - cannot be picked
up - ^{they} feel very firm and cold - and as
he expresses it - like sticks. He can't make
a fist with difficulty - imperfectly - cannot

flex the terminal phalanges - can flex the middle phalangeal joints at a right angle. The fingers are cold - hands are moist. The pads of the fingers are very firm - skin a little shiny. Palms of the hands are hard and quite indurated - no stiffness in the joints of the arms at all.

Legs - no involvement of the skin of the upper or lower legs. When he stands up there is a most marked congestion - extending well above the knees. This the doctor says has been especially noticeable in the morning - the feet become very purple. The ankles look a little swollen - and marked with the shoe in several places - pits half way up the legs. After standing for a few minutes the foot becomes quite purple & venous

congestion is extreme. Big toe joints
not specially swollen - not specially
tender. No tophi in ears.

Apex beat is felt in fifth - no en-
largement of heart. Action is a
little rapid - in the erect posture
is 138. There is a soft murmur at
apex - probably due to the rapid
action. At base sounds are clear.
No pigmentation of skin.

Sept. 7th '91. The fingers look scarcely
so purplish as they did - and I
think are scarcely so cold. Otherwise
there is no essential change. The
nails are all heavily ridged hori-
zontally and the ridges beaded. The

erythema extends up the arms - no special change in the face. Bora-
plains somewhat of a little numb-
ness on the left side of the mouth
and on the upper and lower lips
and along the left cheek as far
as the lobe of the ear. The naso-labial
fold is a little stiff - as it was at
the first examination. There is no
special change in the skin of the
trunk. The feet are very livid and
cold - skin about the ankles and
feet feels a little indurated. Cer-
tainly as he stands up sits down
there is less congestion about the
legs.

Mr. ~~Ward~~ has had a fairly good

summer. The pulse rate has been
from 87 to 108 - average of 95 or 96.
There has been no palpitation of
the heart except for a week - when
he stopped the Digitalis mixture.
He took the thyroid extract faithfully
until about a month ago. He
is stronger - able to get about better
and the color of his face is better.
His present weight is 135 pounds - the
same as when he came to Baltimore.
He ran down to 131 pounds - but
has gained again.

May 13th, 1905. He looks remarkably well; the color is good; the facial expression is very natural. While the face looks a little

smooth, it can be wrinkled easily and the skin does not feel at all sclerotic. The ears are not affected. Practically now no involvement of the face at all. The hands still look a little congested. He has very much more use of the hands; formerly he could not more than partially flex the fingers; now he can make a fist; they are always cold; not always blue. He still uses the hands a little clumsily. The hands feel moist and cold; they look a little blue; the skin is a little stippled like a washer-woman's hands; can extend the fingers almost completely. The skin on the backs of the hands is soft; the skin over the fingers is firm and indurated, but not nearly so much as formerly. No involvement now of the skin of the trunk; a good many dilated venules. A. b. is not visible, not palpable. Heart's action is rapid, an occasional drop. The legs are wonderfully better. There is no redness. The vaso-motor condition has entirely disappeared. Practically no sclerosis of the skin of the legs. He took the thyroid for at least a year. The left ear, which was involved, and the left side of the cheek, took nearly three years to soften; the skin is now perfectly pliable.

Jan. 25th, 1906. He has still a little lividity in the hands and feet; hands still get blue. The most striking change is in the face. The ears are now soft and flexible. The face looks natural, perhaps a little smooth; still no crow's feet. The skin can everywhere be picked up, and there is no single spot presenting any actual scleroderma. There is a most remarkable change in the hands. He can now make a fist. The skin can everywhere be picked up. It has lost its elasticity; the pinched fold takes a considerable time to disappear. He can flex the terminal phalanges. The skin can be picked up on the

back of the proximal phalanges, and raised in folds on the others.
Feet still get livid; has gained in weight. Is wonderfully better.

~~noons~~ - crural neuralgia.

6.22.96

~~[REDACTED]~~ Raleigh NC 37.. (W. Hubert Hayward)
Professor
Script of leg & foot - & heart.

Four years ago a numbness in muscle of rt foot - moves
on up the leg to the knee - only when walk - same
thing seems to show in the lumbar - burns. often with
vertigo. Palpitation of heart - leg gets red a bit - but that
does not come with the numbness. On both sides of the face
numb man - has the "redell" - never heard the word before -
in cold weather. Worked too hard

In last month. Shortness of breath - vertigo is bad.
For six days has hardly been able to walk on account
of the stomach. No dysphagia

Thin rev. looking man. Nothing evident in the
foot - Sens perfect - Kf; very much exaggerated.
No pain in back.

Leg is very interesting. After he walks for a couple
of blocks it will stop him short - indescribable feelings -
numbness - as though asleep - could not go on - if keeps
on, an uncontrollable desire to stop. If he rests it will
pass away. At same time a feeling of burning and con-
traction in stomach - sickish feeling - and a genera-

tion up back as though the pain was rising.
Looks pretty well - pupil reflexes are good.
Apex beat is within nipple line - not forcible -
no increase in the area of dulness. Heart
sounds are clear at apex - first is a little
short and nervous - no accentuation of the
aortic second. Stomach is a little re-
laxed - no clapotage.

Cerebral tumor or Hysteria - which (?)

8. 19. 96

~~W.H.S.~~ 38. 2014 Bollen.

M. 15th. 2 ch. 1 msc. 3 mrs.

18 mos ago woke up with very spell. no pain no headache. just before between sneezing period. Some mss per week until 6 mos ago except pain is shunab - another very spell. night - fitful. no diggers. a 3rd spell 3 months. every month about 3 mos about mss period. I. I & ang. diggers.

Has had 10 days a n. n. n. n. with headache first headache. - after vom. slurred. gurg. & at back of head. very severe, could vom little & bit - has to lay down. always in back. Faded. never has to hold on. never have fallen. Had a bad spell on street - Face got flushed and. Feels in legs as tho asleep. after the spell not lost in weight.

In '91. attack pain & shunab. flushed & in opal had papillitis. no ed. no vom. no headache. cuffed & leeches before the attack Dr says opal will about 4 yrs & face gets flushed. Headache never any - severe spell & over 3 hours. - suffers really from syncope - 3 minutes spells in street.

(over)

Looks very healthy and well - good color. Eyes are perhaps a little prominent - but that is natural. Perfect movements of the ocular muscles - all movements of facial muscles are perfect. Grip of the right hand - of left 37. Stands well with the eyes closed. Knee jerks are distinctly increased - no ankle clonus. Very marked blurring of the outlines of the ~~fa~~ left papillae - particularly in the lower section - no swelling. Very marked blurring of the outlines of the right papillae - veins are large and full - contrast between the two sides is quite striking. On direct illumination the right papillae looks very white - the inner quadrant most so - no haem-

morrhages. Hearing in the right ear
is quite defective - can hear the
watch at some distance less than
in the other ear. Sensation is
perfect. Heart sounds are clear. Pulse
is a little rapid. Slight relaxation
of the stomach. Nothing whatever ab-
normal to be felt. No enlargement
of the liver - or spleen.

Throat looks quite - natural.

11.25.86. Has been taking K.I. up to 8mxxv
a.d. with great benefit. No errors all the
time. & dinner is better.

~~49~~ 49. *Usnichia dug.*

Recurring attacks of pain last me yesterday.

For 3 days - Friday eve. began at night as usual. Thought
could stop it by podenine 46 gr. morphet - after went to bed
in 3 places. (a) under left chest (b) in front & (c) lower right ankle.
Gradually. usually can stop them by $\frac{1}{4}$ of morph. Bed night.
sharp pain somewhere that had spasms of pain cuts up
& clenches the fists - until about in bed in the all night in those
weathers. Stayed all that night next day. Sunday
night stopped temporal. Monday again. Yes afternoon began to
disappear. Pain would des in the we slept & disappear in
the other. ~~Has~~ ~~sore~~ tooth ~~sore~~ tooth ~~sore~~ tooth. On Saturday am.
having taken as much in as thought after. Took ~~sore~~
some inj of Hygocaine. Then another. Told gave morphis
sure at 8 pm inj of 80 gr. in 2.0" another of 80 gr. &
put up pressure on arm. Fell asleep & slept all night.
never bad it so long as this.

F.H. Parents died wh he was young - no nerv. tr. S., ^{rural a.}
Nev. first. I.B. d. of soft glaucom 52.

P.H. Healthy as boy. Enter navy in '66. In '68 had syphilis
severe attack - caunes. Was thoroughly treated, active

Had gouty attacks 6 mos. No ex pos. or hand shft.
1st attack of present trouble October Bel $\times 74 \frac{76}{\text{age}} \times 78$ - say
76' began & have the pains, thought they were rheumatic.
In legs. no swelling, pains in dist part, stark in knee
or sole of foot or in heel in both sides, tho, not together. &
down the sciatic nerve. '78 - '81 in cruise attacks at time
well - characterized. in bd ship took ^{the} Danat, read account
of jalasca - described the disease - before '81 in '80. Fished
a year with it in '82. on duty - over in event abroad
saw Eugene Dupuis - under his care - treated him
first. Charcot saw him, said takes - & treat. Springs
of Danalox. in so. off Fra. bathed 21. went to sand in the
chilian monte - no pains for a year. Then comes back.
Belton went to Danalox again. no effect. 3 weeks. Since
then off - m. as a rule not in capable. 44 gr of Memphis
slips it. In '80 first had it & in 16 years. the 44 gr does
not lose its effect. No one knows wh bring in - where
under the name. Gets nervous, & excited, knows it is coming
in - (P.M.)

No ataxia - no visual trouble - a short time ago in
reading. Sexual vigor unimpaired.

Pretty temperate -

The pains are always in the legs. for a long time chiefly in the
inner aspect of left foot & along outer side of calf, but now in various
parts. Once he has a little twinge in the left hand, when tide
station is good.

Very healthy looking man - arteries soft -
no sclerosis - no increased tension.

Knee jerks gone - a trifle on reinforcement. No disturbance of sensations ~~on~~ affected side. regions. Very slight pupil reflex. Pupils of medium size. Slight difference in size - right is about $3\frac{1}{2}$ - left not much more than $2\frac{1}{2}$. Discs look a little grey - vessels are not narrow. Strongest light does not produce very active contraction.

Benn-Heng.

Emmitsburg end.

Dwelling last fall. in sept. little fit now.

In January or Feb 5 weeks.

5 ph. 10 y. ago had attack - a little so throat, not much on skin hives did not come out. Treated steadily for 5 years Hg. & K.I. For two years well. dry eyes. bald. Now gout appear 2 years ago wh enlarges the eyes. Eyes at the same time. Palpitation at same time is a little earlier last fall in Hospital at St Paul for the dry eyes. not all attack not all gone yet. Picked up in Jan.

Brown complexion probably from the sun -

Fairly well nourished man - complexion brown - marked exophthalmos, fully 2 mm. of the sclera exposed above and below cornea. Pupils of medium size react to light. non Braggs sign slightly marked - the descent of the lid does not keep pace with the descent of the eye - occasional retraction of the upper lid - almost complete loss of the power of cover -

gence - wrinkles the forehead slightly as he looks up. Fine tremor well marked. Medium sized goitre - both lobes and middle affected - marked visible pulsation. Thrill, particularly in upper region, very intense bruit, systolic and strong, continuous murmur at the sternal notch. Cardiac impulse is very wide, visible in second, third, fourth and fifth inter-spaces. Apex beat is seen in fifth outside nipple line - felt also slightly in sixth. Both shocks well felt, markell thud of the sounds at the base. Loud apex systole, increases in intensity towards sternum - very intense in the pulmonary region. In the second left interspace a distinct short systolic murmur, well heard when he draws a deep breath.

Legs are infiltrated, a little swollen, remarkable pigmentation, ^{appeared} particularly on the skin of the leg two years ago last fall, without , or without any

rash on the skin. It is a deep brown staining of great intensity. It extends close to the spine of the tibiae. On the sides of the legs it does not reach so high. On the outer side of the leg it is just three inches from the head of the fibula. On the left leg it extends a little higher on the outer side, but the areas are very symmetrical. Behind it extends in an uneven border a little above the most prominent part of the calf. It shades insensibly into the normal tan skin. The color is very peculiar tan brown. It looks perfectly smooth. There are in places over it little whitish elevations scattered over the whole leg, much more marked on the outer aspects. One or two of these look like definite little fibroid nodules. These are very closely set over the skin, but only a few of them project beyond the surface. On palpation these brownish areas are leathery, firm, hard.

the skin can nowhere be picked up. Everywhere the line of demarcation between the normal and the infiltrated skin is quite well marked; one feels a distinct ridge - a slight discoloration of the skin beyond the most prominent part of this ridge. The scleroderma is limited accurately to a line just above the margin of the foot top. No coldness - nowhere pits - no cutaneous fibroid nodules.

Abdomen is full - large - edge of spleen is readily to be felt below the costal margin. Edge of the liver is normal. Knee jerks are a little exaggerated.

May 21st 97. Thinks he has lost in weight, and has not been so well. Pulse has been more rapid and irregular. Has felt the heart's action more, and has had more headache. Pulse now full - a little jerky - occasionally drops a beat, 120. No change in the esophthal-

mos. He perhaps looks a little paler.
Very marked throbbing in the neck.
Superficial veins over the thyroid and
the external jugular are much dilated - both external jugulars are as big
as large-sized lead pencils. Venous pul-
sation in them as well as in the smaller
veins. The whole gland throbs - in fact
there is marked beating and heaving out-
side the nipple line in fifth interspace
and over the entire front of thorax. There
is also a very localized impulse in the
left siphoid angle. Very prominent im-
pulse in the right hypochondriac region,
evidently pulsation of the liver - most
pronounced between the right nipple
and the tip of the tenth rib. Marked
pulsation of the veins of the backs of the
hands. Capillary pulse in the wrist. Ap-
petite is diffuse in fifth and sixth inter-
spaces - wavy. There is a loud systolic
bruit =

~~loud~~ ^{thin} bruit at the base. No essential change
in the sclero-derma on the legs.
Brawny induration as at previous
note. Over the tibia there is some
oedema, fits a little.

Patient died on Aug. 8th - 97.

Ball valve stone
cholelithiasis

4. 27. 97

Mrs. ~~J. A. M.~~ 40. Prof. station ab co & a. (so McGrade
Cough of cut flower - relieves - & convalesces
1st attack 7 years ago. 12.9 ago went to Tampa
died too much - rough voice. muffled for 6 or 7 mos. pains
in side, & high fever. ^{sweat} ~~sweat~~. same as now. Then
had peritonitis. in 85 said mesentene very ill.
In bed 17 weeks.. At first voice muffled for 2 or 3 years
never cough began again ^{3 or 4} ago. Heavy dull pain
in head no chills at first. 1st attack of jaundice
in 88 or 89. chills then a high fever, not regular).
Health poor for years. married in '91. very delicate. No
jaundice then & terrible tettering after baby. At intervals
jaundice & even once. a year ago visited all of eng.
after violent chill, a fever & sweat. after then
had them all along for weeks every few weeks
fever chills sometimes w/ a chill. T. 103-105°
extreme pain in liver. & still left yellow urine
for a month. Stool - . stools an clay colored.

Has bleeding from bowel at times.

Looks pale and thin - skin has a
brownish tinge - little icteroid. Lips
are of good color. Pulse is good. Curious

staining of the skin. Abdomen is a little flat swollen - right costal groove obliterated. Respiratory movements are natural. Liver is not enlarged. Left lobe can be felt just a finger's breadth above the navel - right lobe does not extend so low, not more than three finger's breadth from the costal margin - little tender - not so much as it was - surface is smooth - uniform. Edge of liver can be felt very distinctly on bimanual palpation - lifting up from behind feels like the edge of a spleen. There seems a very distinct notch or groove in the mamillary line which divides the right lobe from a tongue-like projection extending to the level of the anterior superior spine - thin edge easily felt going considerably below the level of the hand and which further over to the right than is usual in the tongue-shaped depression. Gall bladder is not palpable. Upper limit of liver dulness on the seventh. Edge of spleen is just palpable. Llands are not enlarged. Heart sounds are clear.

Epilepsy, post Epilep.-dell -
+ prunes

Nervous Dyspepsia.

40. 2 8. 97

Mrs [REDACTED]³⁵ Birmingham ala.

Cramp colic - at all M 5 or 6 - above navel - lasted. Morphine - glass full grain whisky, slept 20x of these severe attacks in the five years. Last Hasty ben-saph over 4 or Kelly. 14 months ago. No attacks after the operat until 3 weeks. Stomach trouble bad.

Cans

Gained 14 years, no child. Has had 4. Dr Mitchell 7.9. ago first. 2 or 3y ago. Convul seizes. evolvd hyster. none since. None since Dr Kelly did operation. Better but getting over again. Gained 10-15 lbs in # last year. Excruciating cramps at 8pm-11pm. now the nausea at 10pm late - apple eating in man - collapse in severe nausea - get weak & the perspiration off. 2 or 3 short attacks not bad. Much acid. - no pain due to the attacks -

Unconsciousness has ceased since the operation.

Liver. - Edge of right lobe easily felt - no ten-
derness - gall bladder cannot be felt. Pain on
pressure increases as you cross the parasternal

line. The pain is very much more in the middle line just above navel. Spleen not palpable.

Stomach.- Upper limit of tympany on 7th - extends low - two fingers breadth from the navel. Distinct soreness on deep pressure. The pylorus cannot be felt. After inflation stomach tympany extends to level of navel. Right kidney not to be felt.

Heart.- Apex beat is in normal position. Sounds are clear at apex and at base.

Anæmæ splenica

[REDACTED] 58. Rockford Ill.

C. of Sul. Spleen.

Mal. regim. On a fever as child. at 7. well. since in 72 had erysipelas bad. That's all except Rheur. acut infl. at 10. were since. Hard work in practice. temperature "

P. I. In winter 82-93 found T. 102.5 - & a dose or 2 of aloethine. a few steps - did not feel sick - Had the fever for 6 weeks. did not feel sick - doubtful wth. the smaller. after a mos not able fed & swollen & painful - only a few days - was painful. noticed spleen enlarging - not very prominent. In 93 went to Fair mounted along about May 85 - found was anæmia & in 94 mounted along about May 85 - found was anæmia & weak. Took tinct. In June not strong. In Aug very debilitas & aches with it. Said off & on - got out last 2 mos. acute diminished. In Oct & Nov. gradually turned on Jan 96 was pretty well, walked & went home in Jan, went back, did good full work in '96 till May found latter pt of May anæmia & pale. Took anæm. & iron, got a derma & old tincture. not so large as in 95. T.M. 2 lbs, a derma & sulphur varates. Blood showed 4,400,000. & 51 oz.

Looks a little pale - no extreme emaciations. Tongue is of good color. Pulse is of good volume.

superficial blood vessels not especially full.
Abdomen is large - navel projects. There
is very distinct prominence to the left of
the navel - mass descends with inspiration.
A second mass descends just below the costal
margin. In the first a distinct notch can
be seen. On palpation the notch is readily felt.
Spleen is firm, hard - edges are rounded. The
lower margin is a little below transverse na-
vel line. Edges are singularly rounded - surface
smooth - does not extend far back into the
renal region. The other prominence just to the
right and above the navel is evidently the colon in
flatulent distension. The edge of the liver can
just be felt two fingers breadth below costal
margin. In nipple line no enlargement. A
small ecchymosis just to the left of the navel -
no distension of the veins. Apex beat of heart is
pushed up, just below the nipple. Sounds are
clear. Aortic second a little snappy. One or two
enlarged glands in the left side of the neck -
one or two in the groin. No puffiness anywhere.

matographia - sweats profusely. Heart sounds
are perfectly clear - ~~second~~ The skin is free-
ly movable over the occipital bone - Occip-
ital ridge is well marked - and the
ridge on protuberance well marked. No
special difference between the two sides of
the occipital bone. There has been a little
thickening or induration at the base of the occipital bone.
Movements of the cervical vertebral perfect. No
hemianopia with coarse tests. Left optic disc - margin
sharp - well defined - no cupping - no trace of neuritis - tint

Intestinal sand

Mucous colitis

Morning diarrhea

Pain - morphine habit

3. 17, 98

[REDACTED] 36 . York Pa.

on Lincoln Ave. 75. 2 years ago came back

to York. Gave up after the grippe. & a mucous colitis
used to get at beg. fever. several - in August. nervous
system. Practiced. In Oct. malaise pain in limbs &c. T.
grippe again. Then aching ec. lasted 3 weeks - in bed. 1st. well
after which passed mucus. Shreds. cast almost - occas. bright
mucous than membrane. Came home. 3 weeks after better & still
passing mucus. & oralgia & pain in left hypopharyngeal region. pain
in cr. by feces. - sore spot. Returned to doctor. In Chicago caught
cold. Had grippe again & one day or specimen arrested & found
no ulceration. Much run down. & worried. Morning passage -
mucus in stools. always when awake uneasy feeling - several
passages - regular mor. cleanse because of the 3 or 4 passages
until 10 am kept busy. Pain in bowls & very intense - cold temperature
hypoder of morphine eased him. after which took more. Finally with
a 1/4 eased him. In the day until dinner intensity of pain
~~passed~~ & during that time the swelling offshoots, the aphrodisiac
2/4 has passed & during that time the swelling offshoots, the aphrodisiac
regained in flesh. since has not gained in lost - varies a little. appetite
good. now gen health good. not bowel trouble keeps up. In my grippe
& mucous colitis York treated him. Passed sand small oval body
irregular & beautiful garnet color, not affected by alkali or acids. Tested
for phosphate - wh. was present. run from the bowel. Under the microscope
looks small oval bodies. My Uncle passed the sand - mine now
for 2 1/2 mos last summer. The 2nd differs for the first. He brings a
sample of about half a teaspoonful of brownish small - sand like
& gritty. little stuff in color. Morphine ever since over even over 1/2 - 1 1/4
a day. (2 1/2 years). Mucous colitis goes more diarrhoea gradually
changed. for over 10 mos no more diarrhoea. Nectal disease.

Hiccup & belching

4-19-98.

[REDACTED] (T.H.S.) II. Union Mills Carroll Co. a man

for 9 mos pain & belching & hiccup at night. not always - no loss in weight. From 60. only 2 lbs heavier. Began with all of abd. muscles & in right lump of pain in stern. At inter had then pain at night. belching all the time & hiccup. (Dr. Battingslea physician & Dr. Herring) Not for 3 weeks until Sunday night. Pain & nausea, a belching began Saturday am with hiccup. & not well till 12 M. Yester
y and pain in stomach. Begins before 10 o'clock. continuing as late as 6 pm. Food no differ., since the beginn. has lasted 1/2 an hour. once at 4 pm had eaten whipped cream & S. Nuts followed oatmeal & cream & sugar.

Healthy looking boy - good color. Liver and spleen not enlarged. Stomach not distended. Right kidney can be easily felt. Appendix palpable. Heart sounds very remarkable case. Probably nervous. are clear. Little relaxation of stomach - not marked.

To take the Mag carb. 1/2 tea spoon. Tongue little large

5.20. Better, but relive till last sat. night

May 14. Took cold. had tonsillitis. att. in Sat night. pain in head & stomach no vomit. w/ the pain. no hiccup or belching. attack 'on 6 to 10 pm. no belching'. Good appetite

ate soft crabs for ~~laffer~~ Saturday night - & strawberry
Sleeps well mouth open - not a snorer.

5. 24. '00. V. much better now. sleeps. Return
when 5 weeks with more pain. Comp of
pain in stomach comes & goes in chest. Pain in
shoulder & side; Only in eve. Thro' occ in morning
walking does not disturb. Some belching. He last week
not so much, as first, but more pain & serum.
Looks pale, good appet. Goest, bid, has a little
stiff gressue. Riders. Up to 3 w. & strong

Looks a little pale and yellow - looks nervous.
He is distinctly tremulous. Both this boy and
the twin brother have a little tremulous-
ness of the hand - more in the other than
in this one. Liver is not enlarged. Spleen
not enlarged. Abdomen is perfectly nega-
tive. Appendix is just palpable - no tender-
ness over it. Tonsils still a little enlarged.
Apex beat is within the nipple line. Skin
reflex a little active. Tongue is clean.

Auscultation.

4-22-98.

200 lbs. strength not so good. active at
work. Worked a lot with barrels. -
Good and 85% hemog

Oct. 28th, 1902. He has been very well for the past two years. In the middle of September he had an attack of vomiting and purging and became very constipated. He has had several attacks since. Very much opposed to going to school; this possibly had something to do ~~is~~ with the first attack. He looks pretty well, a little thin; tongue is quite clean. A little tremulous and occasionally a little jerking of the hands and trunk. Abdomen is soft. Spleen is not enlarged. No pain over the appendix. Appendix is readily palpable. Liver not enlarged. Glands in groins are a little enlarged. No enlargement of glands in the neck. Very nervous and apprehensive. Does not want to go to boarding school.

Nov. 11th, 1902. Has not been quite so well; had pain Saturday and Sunday; did not vomit. The abdomen is a little distended; has just had his lunch. The outlines of the stomach are visible; lesser curvature is just above the navel. Distinct slight dilatation of the stomach. Splashing as low as two finger's breadth below the navel. Pylorus is not palpable. Spleen is not enlarged. Liver is not enlarged. No glands to be felt. There is slight peristalsis. The lesser curve is very plainly to be seen moving up and down with

inspiration. Evidently marked dilatation.

Ordered two grains of mercury and chalk three times a day for a week.

Dec. 9th, 1902. He was quite sick for a while; recurring pains; better for the past ten days. Tongue is clean.

IN OFFICE.

Family History. - Father died aged 42 of "peritonitis."

Mother living. One brother died of diphtheria, one of pneumonia, two of cholera infantum.

Paternal grandfather died of softening of the brain. Paternal grandmother alive and well.

Great-uncle on father's side died of softening of the brain. Maternal grandparents - cause of death unknown. Two great-aunts ^(or cousins) on mother's side both insane.

Present History. Four years ago began to suffer from neuralgia in head followed by "bloating" after eating. Neuralgia continued for twelve months at which time

vomiting commenced continuing about six months, followed by an interval of immunity for three months, vomiting re-commenced and continued for fifteen months, stopped for a month, started again, and vomited five months, stopped for a month, started again and vomited two months, stopped two weeks started again and is still continuing.

Has never had any serious illness of any sort and knows no cause for her present trouble.

Came under my care for the first time March 25th. Told me she had been under the care of different physicians with temporary benefit. She was treated by a physician for ulceration of the stomach with benefit for the time being. Finally the patient consulted a Toronto surgeon who in consultation with a physician

advised removal of the ovaries.
To this the patient declined to
submit and came up to Hamilton
& consulted me March 25th.
I made a very thorough examination
throughout. I could find nothing
in the chest. I could find nothing
in the abdomen - no intercostal
respiratory distress or other
reflex cause of gastric dis-
turbance. I examined her bi-manually
under an anaesthetic. Uterus, tubes
& ovaries appeared in all respects
normal, though slightly undereized.
She had about a slight inequality
of the pupils. I put her under a tapeme
but could find nothing in either
femur. There was also no account
for the incessant vomiting - The
patient did not appear to be in
any sense nervous. The physician
who treated her for ulcer of the stomach

I knew she a very capable woman
and I advised Miss Howell to
submit - ~~an exploratory incision~~
over the region of the stomach in
order to ascertain whether any
adhesions or pyloric stenosis
might be causing the trouble -
The patient consented and I
opened the abdomen on April 9th.
I explored the stomach, pyloric
& frenum and the first part of
the duodenum. The parts as far
as I was able to make out appeared
normal & the abdomen was closed.
I felt I could not scantly remove
the ovaries, firstly because I
could detect no lesion in those
organs and secondly because
I failed on the closest cross-stam-
nation to find any connection
between the vomiting & the generative

organs. I have expressed the ~~suspicion~~^{suspicion} & the patient and her friends that the vomiting may be of cerebral origin. The history of more or less head trouble on both sides of the family leading me to this view.

Hysterical Vomiting
(Remarkable case). X

5.31.88.

'copied on'

~~██████████~~ Oct 20 Hamilton st. Dr Cockburn M.D.
History appended. Stenograph ~~was~~ not written for $\frac{1}{2}$ hr.

No neuralgia for 3 years. Complaint as soon as eat
you vomit - sometimes cannot finish a meal.
Vom after each meal. - If does not eat anything for a day
or so will keep it down. Does not vomit at all. - some days
as soon as gets up in bed, comes out - thinks she vomits
at all. Best weight 130 lbs now? Vomits same after each meal.
Tucks well. never vomit at night. Has had the stomach
emptied out. Sometimes will retain a glass of water.

Keeps well. Tired a month back for 4 mos. \$
after the operation of along well for two months. no pain. comes
up early. - same as goes down.

Does not look nervous. - tells a good tale
Never has been unwell - only a few times in her life.
advised to go ahead a week - not to take any medicine

General condition good. Tongue pretty
clean. Blood condition good. Fairly well
nourished. After inflation no special dis-
tention - stomach tympany fingers breadth
above the navel. No peristalsis. Right kidney is not
palpable

Nervous vomiting & cough.

c nerves. - London affected. lasted
for 6 or 7 years. 1st thing noticed a cut of the toes
when stood up & the fingers became stark & stiff
get stiff in extreme. & separated every day - all
the time the balling in each finger..

G. h. good fine. not an ache or a pain, active in
business. In publ. in last stood to Congress. very heavy smoker
7. ⁸⁻¹⁰ cigar. no nerve trouble in the 7-78. in 68. This
arthritis B & S. well. is nervous. No disease of any kind in
this man. very heavy smoker. something influences
it on a moment. or suddenly feels it at once.
^{In 2-3 months good. very quiet. nothing much done or smokes}
For an hour in the day not feel anything in arm. no
cut of toes or stiff of fingers. but of 25 cases. usually
slight - it is in him. People stop him in street talk
I don't know. of writing. lists & names, hum. do not
do it at all. This for 3 or four years. can under pressure.
no pain - not even a passing pain - nothing but general loss of
weakness & standing still he stops & has a tremor
slight tremor on the hand at rest. As far back as 1892 ~~can~~ he
remembers feeling a little tired.

Very healthy looking man - well nourished - weight
(census). M. d. (PD & C) 80 $\frac{1}{4}$ for 10 days - slip of 5'
smoke Tobacco & whisky. live a good life

198. Gait and station look normal. No disturbance of speech. Pupils are equal - react to light and on accommodation. Undresses himself readily and easily - unbutton and button clothes without difficulty. When he wants to turn round he has to make a great many steps. There is a distinct shaking when he attempts to turn quickly - and there is a slight tremor of the whole body. When he bends forward there is a little decided shaking of the legs and of the trunk - not of the head. As he walks the arms hang close to the sides - does not swing them. After walking a few minutes the fingers and thumbs are in extension and a little separated and he complains that they feel stiff. The feeling of stiffness in the hands is from about the middle of the metacarpal bone - never seems to affect the wrist - there is never any drawing in flexion - always in extension. It is only when the fingers are at rest that they feel stiff - when at work no abnormal sensation. When free the fingers naturally work themselves into the extensor position. No incoordination - no tremor in either hand - either when at rest or when held out. When he first awakes in the morning he swings his arms - and there is no stiffness. The muscles are well nourished - no wasting. Sensation is per-

When he is at rest there is a little shaking of
the left arm.

fect. sensations to pain, touch and thermic
sense normal. Hands become sticky - has to
wash them a dozen times a day. When the
hands are in extension he cannot instant-
ly, quickly flex ~~them~~ and extend the fingers. There
is no retention of the grasp when he holds on to
an object firmly - the let-go is instantaneous.
The muscular grasp by dynamometer is
right just 100 - left a little less. Knee jerks
are plus. Station is perfectly good. He can go
down stairs or down hill much better than up.
Can stand erect without any tremor. When
he stoops over a little the shaking of the limbs
and trunk begins at once. Feet look normal. After
removing his shoes and stockings the toes were
drawn up a little. Big-toe and second widely sep-
arated from each other. Toes feel as if drawn
to the floor but they are evidently drawn up.

Gall stones &
neurosis

[REDACTED] 38 2222 Broadwell ave

c. 9 mos ago began with grippe; contraction
(in Feb) of muscles on rul. left side taken pell-mell over suddenly
called to his wife. The reverend man ^{Tempoire man, no exertion} had left him, the
muscle were cramp in leg & arm - left side. crawled back
to couch, did not lose consciousness. very much frightened
that he relaxed. but was stiff for several hours.
Saw Dr Chambers 8 years ago, interested in stone works
in Trenton, lump in abd. Dr up there, send a tumor. came
home next morn. Saw Chambers - 4 am, send no tumor
no trouble with it till the grippe. Then it followed up that
got pains in pit of the stomach. - at the spot - can feel
a hard lump. Has had lately 6 attacks of the pain. 2 or 3
days, wentened & is baggad after each one. lost 10 lbs
in 2 days. Pain is intense. Morphia relieves of get enough.
Pain goes sometimes up the neck. gets cold, & trembly.
Ends up. sweat freely. hair is hunched & forehead white
was better 6 weeks, while travelled - no attack. attack
brought on by worry. Has had faint trouble which has been troubled
very. Is very irritable. No appetite & diet. No walks up hill
feels not get it. but is plagued with feels something - then
a weight "stone hanging to a cord squeezing up against me"
no nausea. no vomiting. Has been bad more than
seen a week. goes to bed, severe headache at time. The reverend
stood up, cannot walk about, cannot stand, gets up

a great deal of gas. Is dusted up with the pain - no diarrhoea.
constipation. No rumbles or burping in the bands. Two
attacks in five weeks. at Trenton. Has lost from 223 to 180
inches a bit sick & pale. pulse good, tension normal. Heart
sound clear. The hepatic carb. stands out as a prominent
body. A Doctor said he had a tumor there. Nothing to
be felt in abdomen. Liver not enlarged. While with
a doctor in a 5 weeks trip he had no attack.

Great deal of gas. belches incessantly.

12-4-99. Bad attack on Sunday morning at two
o'clock. Pain under right costal margin. Very
tender now over the gall bladder. Gall bladder
is not to be felt no jaundice. Looks a little
pale. Did not have to take morphine. This at-
tack was short.

~~W.S.~~ 31 107 E 25th St.

Physical examination is as follows. 1st. Nov 13 th. 2nd same night
3rd 14th. 4th On 15th. 5th night of 15th.
not much. 10-12 month old. Other. 10 lb. had large
cough. Began that only in this summer. Sputum for
a month - fever & felt bad. Looked bad. This summer
lost weight. 10-11 lbs. Fever nine times.

Lived a year in same house - inf 7 wks & months.
7.4. 7 d. 50 - hemoptysis. In L & R. $\frac{1}{2}$ S. well
nothing trouble & eat fairly. nothing in his past

days have been & am of or R. nothing found.

Looks pale and thin. Chest is a little long
and narrow - measures from tip of clavicle
to 10th rib 13 inches. Left clavicle a little more
prominent than right. Less motion at left
apex than right. Right lung is clear. Left lung
impaired resonance at apex in front and be-
hind. Numerous moist rales as low as 5th
rib in front and to middle of scapula behind.
Expiration prolonged. Medium sized resonant

rales on coughing. Temperature 100°. Pulse not above 100. Went ad m Jan remained about 10th.

5-3-00 Resonance - very slight difference. Has gained 17 pounds. Few crackling rales at the end of deep inspiration. No tracheal breathing.

X. 20. W m 127. up to normal. Good appt. good day, no cough no expect, no fever.
Tubercle ^{was} started in April. Tubercle in sternum

I. 7. 01 In town at work 3 hrs a day. - good and good appt. & sleep. In eve a little fever, cannot get rid. weight same - gained 3 lbs in 3 months (differences). before TB. a few. 1.5-01). Ten fingers fair, able to do a good deal. Left arm & rt also involved. evidently has been an ulceration

good. No trace of any tremor of the head. No characteristic attitude. The right arm is just as well nourished as the left - no wasting. His right hand and arm for everything. Little fine tremor but not more than one usually sees. Dynamometer - right hand 65 - left the same. When squeezing dynamometer there is a slight involuntary tremor of the right leg. It shakes - too - on any excitement or any special feeling of responsibility. It sometimes shakes when the leg ~~down~~ is quite at rest. never shakes when he lies down. All the movements of the leg are perfect. knee jerks are present - equal on both sides. Does shake - and there is a rhythmical movement of the ~~foot~~ foot on the ankle. By strong exertion of will he can stop it for the moment - or if he moves the position. It affects the whole leg. The hand never shakes with the leg - not the slightest incoordination. When he throws the whole weight of the body on the right foot it will stop the shaking. If he stands ordinarily and leaves it loose when excited it is more apt to shake. The pupils are equal - of medium

size - react slowly to light and on ^{actively} accom-
modation. The face looks natural - not
at all impassive. Only once on examin-
ing the pupils - when the leg was shaking -
there was a distinct and positive - but
slight tremor of the head.

2. 6. 00 Looks well. No change in the legs.. not tremble much
in odd-way but does when does not want to. Leg went like a "wheel
with the band off." any apprehension will cause it

III. 10 05. Tremor present in 1800. now ^{Parkinson}
fusces, & mottled T. of hand. & gait
is heavily. & drag.

fairly active. Well marked corona of veins around
the line of attachment of diaphragm - unusually well
marked for so young a man. Pulse is steady - regular -
easily compressed - vessel just palpable. Radials are not
visible. Distinctly anastomotic pulse. No capillary pulse,
abdomen looks natural. Liver flatness begins on up-
per border of seventh and extends to costal margin -
edge not palpable. Right kidney can only just be
touched. No dilatation of the stomach. Liver beats
in normal situation - no thrill. Aortic second not ac-
centuated. Heart sounds are clear - no increase in
area of cardiac flatness. Knee jerks are normal -
not specially accentuated. Gums are clear - vessels
a little full, particularly the veins.

Paral.

Dr Tiffey operated. Feb. 19th. 98, left side
saw me 2^y before.

Pain in chest & back Aug. 99. Then went rollers
on R. shoulder & arm. Place in hot plate size of palm here
was acute. under left side, esp round the side. Very
unbearable, excruciating. acute, right after night. 2-4 a.m.
still in R. arm. occas in left. ^{out to March.} Backward pain to neck. Shingles
in R. shoulder & chest. Nov. In March. pain down whole
back & one eve. became paralyzed. Not right for first
down not arms. Could not sit up. remained paraly-
& only began to walk on Aug. use of hands & body began. a
morphine had to be given. Turner who was fatal, Dr. said
bladder disten 5 weeks. That night. Thot meningitis
legs stiff. ~~would~~ Much pain down spine. To back of
neck in evening could not move, down, down & death
^{of neck & legs} door. Dr. Tiffey saw descended bladder, swelling despatched
& des. also. Morphine reduced. Day began to get better, more
& anxiety & 16-June, steadily getting better. still have to take a little
a little pain in R. arm & sometimes in shoulder & left. feet great
stiffness can not be in sole for a few moment. Walking
well. without cane goes up & down stairs. stiff. sit down
easily. In arm cannot walk at first. From 3 gm to 1/2 L. d.
slight recurrence. Dr. Tiffy ~~suspected~~ that not spine. - Has not gone
away. (over)

The spine is quite straight - no hump. Right shoulder blade is perfectly natural. Can twist the spine perfectly well - bones are quite free. No glands enlarged above the clavicle at all. A little nodule just at the angle of the axilla - another little spot like a pea in the second intercostal space - and another on the fifth rib. The one at the angle of the axilla was larger. The knee jerks were increased. Lungs are quite clear. Heart sounds are loud and clear.

Hysterical Laryngismus

D. Hunter

10. m

~~██████████~~ 3:4 Kings Mountain NC

Naso-pharynx. Has occ spasms of throat
7-y. ago. For an hour sometimes, several yrs
a few minutes face swells & cyanot. eyes weep &
& he grasps for breath - never before 7 years ago. Has
& pull for his breath. Cried & get much worse not so
bad long time since all over in hands & feet. Sat nervous
& weak & felt exhausted. So is & in now. Indigo.
& anything that excited him would bring on. The
phrenic galleries in his throat can swallow well & does
not suffer any pain except when takes a fresh cold. Has
colic. Relief uses Turkey "into the phrenic". Has taken
1/2 a pt a day. Red of them for two years. Begun 2
years ago. Was then dyspeptic. Coughs but little,
all attacks are suddenly. Laryngeal. Weeps more now
20 hrs more. Last week last attack - all night even
but cannot control his voice. 3:7. ago had the voice ~~very~~
changed. Now a ~~guttural~~ ^{slaccato} voice with inter-
vals. Slammered ~~of~~ a deal. at first afterwards ^{of}
a slaccato voice. rather low & with an effort. All the
slam 3:7. ago. & now (10 from 3 weeks). In saying long
opines the mouth puffs the lips & takes a good while
to get it out - nor has learned to talk easy & it does not
alarm him. Sometimes cannot get started right. Has
to be careful & say but not as he naturally would.

Towards the heart for 6 or 7 years 2 y. ago throat in bad shape. Dz.. felt dizzy - did not help. grippe Jan 29 - got next to Palm Beach. That day after dinner "fell lost control of ner. even dangling loose in body" or steamed sand heart all night. Got better. When left felt A.I. 10° per sec 3 am cramps in hands 5. again diarrhoea. 6 am, weak & dizzy went to bed. 4th time to w.c. & fainted away. Had slight running in bed 2 days - while lying down had faint spells about the heart esp. when the pills were out of the womb. Got out. Lost 133 - t. 20. Letterwood with Salinger - There seized with same pains & heavy stools. Cramps & diarrhoea at Atlantic abt. 5 or 6 w. after (in March). Two German who said ner break down. not in worry in business. Took Steu - not care. for 10 days sent to a masseur & a trip .. 3 weeks O.R.C for n.y by sea. Went to atl. abt. Built up more. at home cramps & ner. went to Europe - felt well. Linden bed. low shirts. 90 days ago on had attack of nerve had to depress. In Swiss did not feel comp - some fear. attack of diarrhoea at Interlaken. Vagabond good condition. Felt 90% better. 4 of last July. at atl. abt. Had been going up & down every day. excited & strain. Partner a "tea-knuckle player" to be 4 for his following day. 4 am voice quite excited. Esame. D. made him sit around & talked. Said wait till old or comes & said when do you catch it. at what said the young doctor. & did not pass him

Spent 15 months upst. waited till sept but then did not go. Since then has not
seen Dr. - Dr. Henry good - Dropped morning - lived in much - x - 3-6
most of time. His winter Nov 23 - played golf - cold day. Chilly
but not cold chill to get all worked up - or Remington - sick at 11 o'clock
2 days ago at night wrote up with gurgling urine in right side got worked
up. got nervous - Gurgling in rt. side annoyed him - that appendix
Dix 6 or 7 o'clock on legs. Massage. Swedish movements. 35 trochanter
had tendered. 15 or 16 back pain tho abd. following an argument.
Left hand - 55³ hours. suffer no appile censors. Pain against the
fingers. He never felt blue nor. a gurgling in rt side. like inflamed
liver. Fainted up. Urine heavy & 4 weeks. sudden attacks leave
him & suddenly. Night pain at times in heart. Drinking red.
& black wine. Get moderate. For 3 or 4 weeks going out a great deal.

7/15 - Standard bloods were done and are normal.
Dinner well. I awoke at 1:20 to note 154.
Drowsy - goes heavy day, but detail need here
keeping it back.

Heart looking men. Good color. Pupils are equal - react
well to lights and on accommodation. Tongue is clear.
Pulse is steady - regular. Radials are just palpable. No increase
in the tension. Temporals are not sclerotic. Skin reflex is
normal. Apex beat is just within nipple line - no
retraction. Apex beat is just within nipple line - no
thrust. Vessels are palpable. Fullness extends to nipple
line. Flatness over manubrium. In sitting posture
heart sounds are clear at apex and at base. On re-
tention posture reduplication of second sound at
base apex soft systolic at apex and at aortic cartilage.
In erect posture after exertion apex beat not outside
nipple line. Apex systolic murmur intense - heard all
over body of heart. Disappears completely on held
breath. Liver not enlarged. Spleen not pal-
pable. No distension of the stomach - lower border of tym-
panum just at the navel. Descending colon is finely con-
tracted - easily felt. Appendix is palpable - perfectly normal.
Knee jerks are normal.

2/7/05. The apex beat is in 5th, just palpable; no increase in the area of flatness. First and second sounds are clear in recumbent and sitting postures. No murmur at pulmonic area. Aortic second not accentuated. The knee jerks are normal. Pupils are active, react to light.

Urine clear.

Spondyritis post typhoid
Dr King

3-11-07

[REDACTED] 28 2200 Calmar ave.

Ty. f. in Sept. very bad. protracted - no amphy
except this. after ^{white} curvate began rigidity of muscles of back
that stop & change position. pain in effort to move. to
stop or pull up or turn over in bed, cry out. Walked all
along - a steady state. Gouty hip & about all day & business
for last 3 mos. gained in weight. was much emaciated.
~~had~~ local signs. Butts little a little curvaceous. walked with
difficult. Mother died of cancer of pit. while he was ~~convalescing~~
now back from trouble. no spot in back. & sometimes
short across. no pains down the legs - cannot stretch legs out
straight. If lie down on floor the pain on getting up. Bladder
& rectum all right. cannot work as well as formerly.
After he got up shuffled along - could not lift his foot
for fear of pain.

Pwz. good.

Healthy looking man. Evidently neurotic. Good color -
good nutrition. Movements are all rapid and good.
He has a distinct obliquity of the thorax - and of the
shoulders - the right shoulder is lower. This was
certainly present before the typhoid. Of the move-
ments of the spine - the posterior is fairly good.
The lateral are good. The anterior movements

are very restricted. There is little or no mobility in the lumbar spines. The natural curvature in the lumber region is perhaps a good deal exaggerated. The rotatory movements are fairly good. He cannot stoop over to tie his shoes - or to touch his knees. No disturbance of sensation. No trace of prominence of any of the spines. There is no tenderness except low in the lumber region. He has had no girdle pains. Knee jerks are a little increased. No Babinski's sign. No ankle clonus.

Abdominal Neuralgia.

c of neural. abd. . . . cross-eyed at

3 y old. cried at 7th mrs. filled with glasses at 6. Begun & have attacks sick headache often begun to start at intervals. at 12 had developed to a neural on the abdomen. not head, not so freq. the headache. about 6 yrs ago. "has ~~had~~" a fit of rolling & drooling. Mother described. last for 10 to 20 hrs. Late at night - wakes & goes 4 am & the ams as day light came. now they are longer last 2 1/2 hrs. goes to bed. is strong for abd & has skin around a very big of the pain. no red or starting point. toward the end of persisting irritants not swollen, evit to touch afterwards. no drunk not a bite, not even water unless it's hot. Sometimes does not irritate. June Jan. has had one a month. 3 years ago last Jan. discovered big 7 1/2 8th y "shiner" curr of spine. got a shave. decided a curved change allots reserved. They had been getting worse. so all out for Feb, & all June & then slight one. one or the other of 3 in the year. Better ever since. Not all due to the spine. But they have been coming back but not so severe. Though an evra. for a gyn is often akin to pain & mental des in childhood. No spots cut on the skin. No swelling of the part no bloody come. Now. Operation in 8 yrs for 1st curr. No marbled knippin going on. Dr. Helt, 1st April everything normal. nothing arose with usually perox

Feb 11, 1903 went home. Saw at noon drawing & measuring. Available for
(about) 6 months. Begun to walk and talk - a bit at a time the comes around
and the head of one whole day. Other night a rousing affair.
12. Go interpreted. Dressed bring her back. He said 3 things. One
D. L. says were his attack. Here $3\frac{1}{2}$ months. He has not seen her
had any attack. No brand did not see her. Have tested blood &
urine balanced and - mentally.

Mr. V. mentioned it. Not her. No other cases in the family
but don't know what she is. Tongue fatty. Bowels open.

Her color is good. Tongue is clean.
Little discharge over the eyelids - but no
marked redness. Dilated venous over
both upper lids. Pulse is good, regular,
reason compressed. The abdomen looks
natural & no distension - no swelling. Marked
abdominal pulsation. T. m. r. moderate. Little
tender over the transverse colon. Right kid-
ney just palpable. Little brownness of the
skin of the abdomen - distinctly brown - no
scleroses. No dilatation of the stomach.
Appendix just palpable - can be rolled under
the fingers - no thickening. Spleen is not en-
larged - not enlarged. Gall bladder not
palpable - special soreness - pinched over
on feeling directly over the g. b. Little tenderness
over appendix.

a laryngitis - then in 1898 P. Recd. stayed there
and food. Rest business 2 mos. back a week 14²
at 122. Sp of 98... not ill there. Came up in 99. Lorn my
* chly after dinner. Went back Dec 99. Took a lot of Mew.
Stayed all about us may well all winter. Rel. May 1900.
In June 1900 back to P. R. all right. wearing & dagg. -
Returned in Oct. 00. a week very busy. Had sudden re-
right arm after a bout of bloody urine - preceded by nothing
but 1/2 hr extra stumbled & jumped up stairs. Got bed Blood
appeared. - no pain. death! In arm clear. Back dis-
comfort - that night寒颤 again. 2nd day clear
Friday morn. could not pump ship, saw Jim Murphy.
clots & am. blood. urine. Said 2 weeks alone - no trace
malaria, had per good appetite. Returned to P. R. ready
3 days urine cleared quickly. In 2 days, all right got their
morn. 1st. felt perf well - no return till end of June.
on homeb. M - bone plus head back - more bleed. long.
that night felt body. next day poorly. Then at last in bed
in eve. had a chill. never one before. - next day better
and not has blood. not have dull ache & that often & pm
blood gum & almost turned apple butter. 2 dys of he went
back to N of Island. Cnt. to buy ultiy. Dr. puzzled. found
a little swelling in the abd. measurable no malaria in 00
Came up to Grumpford. March 20th. again end of Feb. a little
blood... spleen sul. Malaria & 2nd symptom. Dr. called. gave quinine
& dark pills. In 3 w after. Got better. Gained in weight 8 lbs. 2 w ago
earlier seem malaria. Spleen greatly changed - much smaller

to well & doing all sorts of things. not very comfortable. But seen ~~on~~ last
have rung about a very slight.
Lips pale - certainly a bit swollen. Conjunctivae a little
pale. Color of lips good. Tongue clean. A few little
varicosities on the lips - none on the cheeks.
Pulse is steady - regular - no sclerosis. Abdomen
looks a little full - slight prominence in left
hypochondriac region. Spleen enlarged - the
lower border in nipple line - exactly 10 cm.
from c. m. To the right it does not extend be-
yond the ~~upper~~ parasternal line - edge is round-
ed - notch not palpable - freely movable - can
be tilted forward - comes out directly from
beneath the costal border extends deep into
the flank - descends with respiration. On palpa-
tion in the epigastric region the mass can be felt far
out over toward the middle line. Below it is rounded. No
distinct edge to be felt - posteriorly or behind - no
definite edge. Upper limit of percussion is far back.
Clear over the 7th - 8th & 9th interspaces - almost
to the costal border to the right of the axil-
lary line. The ascending colon cannot be felt
well in front of mass. Liver not enlarged.

C bad cough - 1 y or so recently worse & spit up mucus. No loss in w. has gained. Ort our with a V. h. man, not married. Bed weight 137. now 132. T. L. & W. w. d. of regular. 9 b & 5 all w & living P.H. add 2 nights. S & w. 1st thing was the cough. - 'no sign of spatu... no chills no sweat slaps soundy. Coughs every day. runs eyes more. - Has no fever! 2 or 3 times a week lessen. T. 101² F. 100² Red with exertion of cough & mucus is as good as any one

looks pretty well - good color. Pulse is good - regular. Chest is fairly well built - a little less movement at left than at right apex. Left clavicle a little more marked. Rather a wide area of cardiac impulse. Flatness on the left side from clavicle to lower border of 5th rib. Very intense tubular breathing. Large resonant rales with both in- and expiration. Numerous loud bubbling rales as low as 7th rib, practically all the way to the extreme edge of the lung in the axilla. Bubbling rales over the back chiefly with inspiration held below the angle of the scapula. At the extreme

base feeble breathing. Exaggerated tactile fremitus. Diminished resonance - marked at the apex and as low as angle of scapula. Decided impairment of resonance even in the infrascapular region. Heart sounds are clear.

Percussion note is flat. There is no tympanic quality at the apex in front and there is nowhere in the axilla a proper resonance. On palpation one gets as high as the second rib over the dull area the shock of both first and second sounds. The pulsation is very marked over the flat area in front. Abdomen is natural. No enlargement of liver or of spleen.

Dec. 5-07. The rales are not as large and bubbling. Resonance impaired over the whole lung. Flat in front and behind at the apex. Marked impairment and increased fremitus. Breathing is less intensely tubular. In front of the apex coarse resonant rales at the end of inspiration. In the lower lobes behind medium sized rales with both in and expiration. The right lung is perfectly free. No

spot in the left lung which has not some abnormal sounds. He has gained in weight and says his feverish spells are better and he feels in first class condition. More life and energy than he has had for six months.

Tuberc. in shunum

May 22. Patient's main complaint now is cough at night with distress in the epigastrium. Shortness of breath has not been very distressing. There has been no haemoptysis. Weight is now 122. States that he has not had any fever for the last 2 months, temperature having been taken by thermometer. No night sweats. Expectoration much less abundant. Has had diarrhoea for 4 days. Looks fairly well. Pulse is of fair volume, regular, 116 to the minute. Moderate clubbing of finger tips. Temperature - 100°

Thorax. - On ^R right side expands decidedly more than left. Considerable flattening above and below both clavicles, a trifle greater on left side.

Still a wide area of cardiac impulse.

Lungs.- Left side.- Vocal fremitus is well flattened throughout and exaggerated ^{below} clavicle. The percussion note is markedly impaired over the entire left front and throughout the entire axillary region. In the 1st and ~~in~~ particularly in the 2nd left there is very marked amphoric quality to the percussion note with definite cracked-pot resonance. Posteriorally the percussion note is felt just below the level of the spine of scapula~~r~~. Over the lower interscapula^{area} region the resonance is good. Over the subscapula^a there is no modified resonance. On auscultation breath sounds are enfeebled above clavicle with numerous coarse moist rales. In the 1st, 2nd, and 3rd intercostal spaces there is typical amphoric breathing. Resonant rales not heard at present. Marked pectoriloquy. The breath sounds throughout the axillary region are markedly enfeebled accompanied by coarse moist rales. The vesicular character of the breath sounds has entirely disappeared throughout the back. There is no tubular quality to the sounds, but everywhere ^a coarse moist rales are audible.

Right Lung.- Clear throughout on percussion and auscultation

with the exception of a few moist rales above clavicle and in I. i.s.

Heart.- Sounds everywhere clear. 2nd pulmonic accentuated.

Nov. 6.- Patient returns for advice as to where he should spend the winter. Says he feels stronger, coughing less. Has gained 5 pounds in weight since the last visit. Thinks he feels better in every way. Dyspnoea is his most distressing symptom.

Physical Exam.-

Left Lung.- Condition is very much the same as on last examination. The signs of the activity are now most marked in the 3rd interspace in anterior axillary line; on the whole not quite so marked as on last visit.

Right Lung.- There has undoubtedly been progress in the tuberculous involvement on right side. There is appreciable impairment of the percussion note as low as the 2nd rib, and above this level there are very numerous coarse rales on inspiration. Expiration slightly tubular. In the 1st and 2nd interspaces just at sternal margin the rales are unusually coarse and have a suggestive resonant quality. Expiration prolonged but not tubular in front. Physical signs practically the same over right suprasternal fossa. The apex of the lower right lobe seems to be involved. The breath sounds have a distinct tubular modification for a short distance below the level of the spine of the scapula. Patient has friends in Denver and in Texas. Advised to go to latter state.

Died Dec. 1902.

Suspected tuberculosis

X 11. 15. '01

Dr. Putnam

114 2 3 8 1st.
ny.~~██████████~~ 40 119 E 64th. N.Y. ~~██████████~~

'Cough with no fever'. never strong, as child often, never. at 14 'typical mal' rheumatic case. Then no fever until Roman fever in '86. Set up well usually last 3 or 4 yrs - seems to have no winters. These fevers like all the usual decay as about the typhoid. 2 yrs ago had measles in Spring not bad. Got out too soon - felt badly. Dr. No T. in am but in pm 3 or after the measles had it go to bed again. Was sick - no question there. Dr. Putnam said typhoid fever - not high 103° . Caught a cold & then it got set well. Called it abortive typhoid. This in '99. Not strong tho same well in autumn & winter but not up to usual condition & some time not A.L. This summer got a 'real' gnm' some lost mind of duty. had slight fever. Dr. found gnm. but still this could work felt badly. Middle of Oct. making a round of suspect taken ill & card it with malaria. had a chill & fever 102° at reg intervals. went to work in a sweat. 5 or 6 hrs felt badly gave up & went to bed one fever low. Scarcely perc. in am & in evens $100-101^{\circ}$ & went on for a sweat. nothing in blood. Dr. was suspicious. Dr. Delafield saw him. "Said n.y. fever" - rather rare thing he said. The 8 am was nothing the acc for the fever. Then descended a severe in rectum. & found a fistula. Dr. Putnam would operated 3 or 4 yrs ago today - did well.. healed. When got over no temp. 98.4° . was picking up & with good appetite started to do work. Last Thursday had fever again $99+$ inc. & went to reg. temp. 98 in am. 4 pm chills & T. 101° . Dr. sometimes a little sweat. T. go down by eve. In this cold attack could eat. Tried & p. that I was & element. Came regular. Lasted a week. Has had more since. Thundi. Saturday felt ill & cold with it. was not strong, had weak down & at 45 went abroad a while then

very careful.. Died in '86 . Had slight road attack - say. Then
Bz. S. B. d. Burned. - . has lost collar. . medical. T.B. in ec
no syphilis, not a woman.

P.C. not a st- looking man, very visible in face & ears.
4 am - pra. st. night nothing on lungs or heart, a few fine
rattles at top of right lung, he heard - no lab breathing. Heart
area of lungs most carefully examined. no sign of pleur. sub.
Heart sounds clear. at. I normal. Spleen liver spleen not enlarged.
no glandular enlargement. Trachea has healed apparently.
arteries a bit sclerotic. but apex beat is not out aortic and
is not muffled. Heart has been examined - clear.

The case is an interesting one - he has probably taken the
inflammation - the fistula is an important clue being a
fairly tight little tube around about the case.

to have out of doors

Diabetes insipidus

Dr. Landis
11 7. 02
Dr. Allen
or Holt-

~~Diabetes insipidus~~ 35- Cincinnati Ohio

3.4 yrs. had head pain & fever - aching for months & bending in sc. cause been felt body took bed & one night had attack - knew nothing more. For months had headache. Poor + & a severe attack in day, lost power of speech, lay 4-5 hrs - part going, then all right went home. 3-4 weeks after (lost Phrenitis) went up & down. Our. night eyes peculiar did not see right. So. came him blind & unconscious for past year seemed delirious. Was out. 99. Rec. got up had dread of third day. Not so bad.. Has had the thought ever since - nothing seems to go well. Head & the trouble - going on for 3 years. Recently from the doctor a back & kidneys - no sugar. Fevers 105-106 per cent. in 24 hrs. Eyes not 4 with Ophthalmologist. 40-60 cigarette - day no headache.. not much after the attack. Before the attack for 3 years had the headache off & on.. Positive that before the attack had us in - in urine in the throat.

(must drink cold things. Lager is grateful) Came so $1\frac{1}{2}$ weeks a day. at night. worked 5-6 hrs to drink. Eye: Thirsty all the time - no moment without it. Urine 12.9. poor +. Since then has taken K.D. for him to time. Started with 30 mg a day. up to about 150 drops a day.

attack. occ 2 or 3 w after went to bed in acc of headache. Pt lay down for a several months. Attack came this Gibson has number not him, was queer in acc. called Dr. Allen. Fever like for hours, breathes very rapidly - very quiet. few weeks before. T. was up to normal, because for a month - talked at random did not know who he was. as far as his apparent.

(over)

Very nervous man. Married nine years. Father died of consumption. Mother living and well. One brother died of consumption - one of diphtheria. Two uncles died suddenly of heart disease.

He looks a healthy man - weight 204. Good color. No sclerosis of the temporals. Tongue red and clean. Pupils are of medium size - react to light. Pulse is slow regular perfectly steady. No special sclerosis of the arteries. Ocular movements are perfect. Movements of facial muscles perfect. He perspires a good deal in summer - not especially in winter. Abdomen is full - natural. Liver not enlarged - edge of right lobe readily felt on deep inspiration - feels perfectly normal - upper limit of flatness on 4th. Little tension on deep pressure over the pancreas - no duration. Spleen is not palpable. Apex beat not visible - not palpable. No increase in area of cardiac flatness. Heart sounds are clear at apex & base. Trilium is clear - no pulsation in sternal notch. Station is good - stands on either leg. Knee jerks are plus-plus. Tactile sensation is perfect. Distinguishes heat & cold.

Min. - Sp. 2 100.2 + 100.3, my. otherwise

Cerebral Tics

Dr Ball.

Chrysuria

D. Lewis

II 1802

Kensington Md

~~61.~~ Keosau Forest Glen Md

C. of Chrysuria wine - off & on for 20 years. Dr. after
at home & then comes back in must wine every night. never
open 2 or 3 at a time come in twice for a month. never
for 3-6 or 12 mos. never blood. never. never any body
sediment. Has lived 3-7. at 2nd Forest. Washington 15 years.
Before had lived in O'Fall. 10 years. Born in Parkesburg SC. Lived
there all 15 or 20. was sick when left Charleston. Regained here
in O'Fall. no other trouble but this - nothing serious. good
ap. good dig. no swelling of legs, no pains frequent urination
5-6 times a day & once at night. clear in am but often
cat - becomes milky. of late all the time cloudy & crust
in am early.

Spare - thin man - young looking for his years. Arteries are
sclerotic - tension not increased. abdomen looks nat-
ural. No swelling - No enlargement of the inguinal or
suprapubic glands. They can be felt on the left side
as small shoty bodies. No enlargement of the scrotum.
No swelling of the legs. No tumor. No distension of the
veins of the abdomen or of the legs. Spleen is not en-
larged. Liver is not enlarged. A. b. is in 5th - a
little outside the nipple line. Aortic second is a
little accentuated. Pulse jerks are + + . Eye grounds and
discs are clear. *Hoplitis grandis*.

Abs.

Arctic Sturnus.
attacks of unconscious.

III. 11.02

Dr W. H. Fairfax,
Hague Va

[REDACTED] 3d Kinsale, Va

W + son. - attacks 4 of hurting across the
heart & became unconscious. 1st one 2-4 ago.. one in Oct. one
last Jan. Have got heavier. In last 3 lost consciousness 1st one didn't last
fall. Felt pain in chest first. Not a healthy man. Malnutrition
liver spleen or child. In. 5 years. 2 children. Very healthy. His
youngest child is 2 y. old. - death of breath of mouth fast.
He went after the dog. but will run with a stick & stopped him. Has
strapped him again - looked pale - came up the walk. in 't the
house - lay down on his back - became unconscious - fainted & in
a few moments face dark & purple like. After this eyes were
red & jaws dropped. seemed like 10" to his wife perfectly still
when he came to - lay down breath as tho could not breathe.
began to struggle - could not be kept down - took 5 people & held
him by arms & put up - was unconscious. remained unconscious for
some time. 2nd attack playing tennis - over excited. kept
knee in cold snow very running. Attack began with
a pain in chest a burning pain like a screen. Has got nervous.

Healthy looking man - good color - eyes a little in-
jected - pupils equal - react to light. No involun-
tary movement of the face or facial muscles. Looks a
little sickly. no consti-

healthy man. Skin is clear. Pulse is rapid-
regular no sclerosis of the arteries. Knee
jerks are normal.

Heart - a..t. is in 5th-not forcible. Soft bruit
at apex. Loud bruit at base extends along the
arteries. No thrill. No pulsation on tibia-
brium. Aortic second is clear. Distinct thrill
when the breath is forced out. Liver is
not enlarged. Twelve years ago inflamma-
tory rheumatism - another attack six or
eight years ago.

Balalent Cystic Kidney

Dr. Tolson

III. 24. 02

~~██████████~~ 39 Chestnut Hill Boston.

Had grippe 2. y. ago severely. Dr. Baldwin. (Ches. Hill) he said kidneys all off to me found per. in chamber. Before that lived a bit - fulness in abd. more at times feel a bunch. what made think mother died of cystic disease of kidneys. b. in 42nd in 1882 Dr. Fitz & Dr. Westcott. She was 50. had been in & st. Had good further accn. before death. Has not felt that they are larger. Abd. is not P. h. v. m. a strong. exp. - taken ^{large} tablets no pain in back - lame. Dr. Tolson saw in June. for about days... Dr. Baldwin suggested a Dr. Fitz that he had the Balalent kidneys. Patient kindly had thought fit. Has not passed blood often. inf 2 times. Recently at Pittsburgh. 10 days go. for 2 days. about 5 or 6 years ago was staying, tripped a bad fall - blood in urine at that time in bed 2 days. feels a thickening in head P.C. looks well & strong good color.

Robust, healthy looking man - weight about 145 stripped good color. Tongue clear. Pupils of medium size - react well to light and on accommodation. Superficial arteries sclerotic. Heart - a. l. in 4th & 5th, in and just inside the nipple - a little forcible - rather wide area of pulsation! Aortic second palpable. Soft systolic at apex. Ringing, accentuated aortic second. Abdomen, symmetrical - looks a little full in proportion to the chest. The costal border in the nipple line is lifted on

void is not enlarged - both lobes palpable - Both shells are clear.

both sides, a little bulging below the right costal border. The flank bulges on both sides. Girth of abdomen at navel - bent - 85 cm. - over level of umbilicus 89 cm. From behind slight bulging in both flanks. When he stands up there is a marked prominence of the abdomen and a distinct evident discrepancy - particularly in the flanks. The lower ribs have been spread by the masses. On palpation both flanks are occupied by large masses. On the left side - the larger extends fully 3 inches below level of navel. Not so much to be felt except on very deep pressure below the costal border in the nipple line. On bimanual palpation the mass can be lifted up and visibly pressed forward - irregularities can be distinctly felt. It is interesting that the descending colon runs over it - and can be felt as a cord. (He himself has noted it. That it can be moved from side to side). In the right side the mass is not so large. The colon is felt in front of it. There are several distinct nodular prominences - one can feel the definite hemispherical irregularities with the greatest ease. Both masses descend with inspiration. The liver is not enlarged - perhaps a little pushed up by the tumor. Thy-

Hodgkin's Disease

~~Name~~ 31 165-3 Remond Ave. Wash DC.

2 m-3 child.

ent. glands. Tend to stand. No ent. glands
left last Dec. no snuf. Not strong since last baby
Dec. 9. men 10 dgs old also in left breast. painless
swelled. 3 abscess. 3 or 4 w. To 105° . Cough all that
time. Fever on & off all this the minute after supper
to be well. So 101° . None since Feb. 1st.

March 12 went snuf. till April 3rd. 2 volv. measles. Bronchitis
Summer & fall heat. Active & well. December. very
bad. Oct. 1st bad cold - bronchitis. 28th volv. neutritis in
right leg. pain & stiffness - in bed 1 mos. & in esp.
months. Nov. 1st. had a kernel under the left axilla
swelling & low fever. in neck. 1st. at left axilla. Still
night. On Dec. white left breast seems swollen. 3rd Jan
swelling above the clav. bone - Here over side. now
none in the other side. None in arms. not sore. Celio
dipper in the arm & swollen in breast. 3 w. of. very red
swollen. & brownish color. about as w. as 2 mos. Feb
has improved. Swell neck large at Sauberg. Large when she
left home

Looks fairly well - well nourished. A little red-
ness of the throat no marked swelling of
tonsils. On left side of neck no enlargement.
No enlargement of thyroid. No enlarge-
ment above right clavicle. On the left side no

enlargement in inframaxillary or at angle of jaw.
Enlargement of groups at both anterior and posterior
triangles. They are freely movable - not attached
to the skin - have not coalesced specially. The most
prominent one is at the highest point of sternocleido-
cleido. The group above the clavicle obliterates the
contour of the bone. Infraclavicular chain en-
larged. In the axilla none enlarged. One or two
high up under the pectoral no swelling or indura-
tion in the right breast. No nodules. No cul-
ture of either breast. Note a little higher pitched
at left apex - which may be from the infiltration
of the glands. Occasional clicking rale at infra-
clavicular region. No tubular breathing - no fric-
tion. Breathing a little higher pitched and tu-
bular at left apex. Pulse is good. Heart sounds
are clear. Spleen is not enlarged. No enlarge-
ment of glands in groin.

4-21-02. Temp. for 5 days ranged from 98.3° in the morning to
 100.5° in the pm. - and once last evening 101° . She has had
an attack of the swelling for past 3 or 4 days and a feeling
of fulness and distress. Curious fulness in comparison

with the last examination (15th) over supra-clavicular region. There is fulness over the upper pectoral fold. Glands beneath the pectoral are distinctly enlarged. In the axilla they are not enlarged.

Sept. 24th, 1902. On superficial inspection no glands visible; no trace of enlarged glands in the axilla. One just beneath the clavicle. In the right axilla perfectly clear. Manubrium is perfectly clear. No glands palpable in the groins. No enlargement of the glands above Poupart's ligament.

Dec. 5th, 1902. The gland behind the scar and the one just below the clavicle have increased in size since last note. Nothing to be felt above the sternal notch. Manubrium is resonant, resonant under the left clavicle. Air enters equally in the upper bronchus on both sides. No pectoriloquy. Behind no difference between the two bronchi. A few wheezing rales at apices, more at left than at right. No increased fremitus.

Sept 25 1903. recent big bunch below rt clavicle.. curving infolded & infiltrated. none in axilla. Small number c. clear or with ends of lungs

Sputum - repeated examinations negative for tubercle bacilli.

Blood - Apr. 21. 1902. Hb. 68%. r.b.c. 5.112.000. w.b.c. 15.000.

3 in 4 days. Left arm feels asleep.

Expansion is equal on the two sides; clear on percussion at both apices. Breath sounds are clear at both apices in front; no prolongation of expiration. At the extreme apex on the left side zn occasional fine piping rale with inspiration. A. b. is in 5th, not normal situation, fairly forcible action at the 5th a little beyond the n. l. Slight pulsation in the lower sternum. Upper limit of c. f. on 4th, does not extend beyond the right sternal margin, just

out to the limit of the apex beat. At apex first and second sounds are well heard; first is a little murmurish, but no distinct systolic bruit. Accentuation of pulmonic second. A little soft bruit along the left sternal border. In r. p. bruit is more distinct at the apex. Slight irregularity. Pulse is regular, of good tension; no sclerosis of the artery. Ulnar surface of left hand a little swollen; no redness. Color is good; no anaemia. After exertion a little decided wave at the apex.

F. wrote about the wine.

383 Broadway,

~~Musical Box~~, Nov. 2, 1903.

My dear Dr. Osler:

When I con-
sulted you in May, you were
kind enough to ask me to write
you in the fall "how the fight went
on." That in itself has been very
consoling, — your recognition that
it was a fight.

Well, I took a very thorough
course of Bland's pills, and I
think there is some improvement
in the matter of anaemia, though
I have not yet succeeded in
getting the blood tested. But the

head trouble has undoubtedly been worse. I spent the summer at the seashore, on the Maine coast and at Grand Manan, blessed island! which gives you all the advantages of a sea voyage with all the comforts of home. I lived outdoors very largely, ate good food with a good appetite, and was very hygienic generally; but it was really a tough summer. A constant struggle with insomnia, intervals of pretty serious depression, and such sense of stain and confusion in the head! I wrote my letters and read a little, but with great difficulty. I came here about a month ago.

The friend with whom I am stay-
ing has been helped wonderfully
by osteopathy, and I have begun
taking treatments of her man. I
understand that you will not
approve of this, but something
had to be done, and I tried it as
a last resort. This man is not
an ignoramus, but a registered
physician of this state, besides
being a college graduate and a
gentleman. His name is Dr.
Sidney A. Ellis, and he is prac-
ticing in Boston. What he says
is at least interesting. He finds
that my atlas is out of place,
and that consequently there is
not only constant irritation of

the medulla and sympathetic nervous trouble, but so much pressure on the vertebral artery as to interfere seriously with the circulation in the brain. He judges that this condition is of many years' standing, if not congenital. Two other osteopaths agree with him in this diagnosis, and I must say I believe it, because it corresponds so exactly with my experience, and explains all my difficulties so naturally.

Dr. Ellis believes that in five or six months he can work the atlas back into its normal position, and that in a few months after that the brain should be working.

normally. To my mind the degree of relief and mental activity which can be attained is wholly unproven; but I mean to give him every opportunity to make a thorough trial; and just having the hope is doing me great good.

Will you pardon me for saying that my one interview with you made me feel as if you were a friend? I suppose that is part of what it means to be a great physician. And my confidence in your broad-mindedness makes me feel sure that you will be generously interested in this case. I cannot help feeling

what if I should get keep in this
way it might suggest the employ-
ment of this method in other cases,
and so have results important
enough to make me rejoice to have
been permitted the long distress.

Perhaps this is "too previous", but
I trust you will forgive it, and
also this long letter. I shall
take the liberty by and by of
sending you word how it all turns
out, - if it does turn out.

May I just add that your
advice about comforting myself with
poetry helped me through some of
the hardest places this summer?

I hope you had a rich and

delightful summer, and I am
always

Sincerely and gratefully yours,

~~Walter Besier~~

8 Morning.

[REDACTED] 53. 17. E 120 St.

no shock at over 3 years. V. h work ing. no symptoms.
 not much alcohol. no watch. not much walking. did not walk very
 long. some numbness of legs. more or less. naturally irreg.
 No headache. nothing in his or sister. walked very slowly but
 not dejected. No headache the wife. virgin 18 years. ac. Dr. R. in 1870
 high fever. 3 weeks in bed. no recurrence. 14 eggs in gallbladder
 in粪便. dig. not good till lately. Eat fruit. scarters. 12 or
 15 years. F.H. no headache in family.
 M. living. right name. Hand pinched for water. 3 years ago, first day
 of October. left ac the center & when writing slanting
 of the center nerve. and travel a good deal. one finger first.
 slowed down. stopped at intervals. began to affect the writing
 ruined the writing. 14 ago noted in the leg. a numb sensation.
 seas. along the inner side of the ilium. last we except for 1870
 now 170 & perfectly natural. looking. Tremor in arm speech
 & pain. feel it a shield. in pain in my left arm. Bowels
 regular. Takes care now - 3 or 4 will go hand, fingers
 early. carrying a small hand gets tired. favors the right hand.
 no difficulty down stairs. Sleeps well. Fainted twice 5
 years ago. fall on left side inf. - continued for a year. disappearance
 & a year after. the tremor appeared. nasal character stops.
 no extra strain or worry. no stools.
 The extreme slowness in the left arm is remarkable.

1. Tremors.

Healthy looking man; good color; good physique; height 5 feet 10 1/2 inches. Face is not Parkinsonian. Expression is perfectly natural. Pupils--left perhaps a trifle wider than the right; both react well to light and on accommodation. No lateral tremor of the head. No feeling of contraction in the right sterno-cleido. There is no characteristic Parkinsonian attitude. General musculature is good. Left hand and arm unaffected; right hand and arm affected, the characteristic clonic flexion of the fingers. Thumb very slightly affected. A good deal of voluntary control over it, but not absolute. It is interesting to note the changes in the intensity of the movements, according to the position of the hand. When put across his body the motion is aggravated, held up it is diminished, and extended straight at night it is much relieved. While making any voluntary effort, as in taking off his shoes and stockings there is a remarkable diminution in the tremor. Skin reflexes are normal in the feet; no Babinski's reflex. The abdomen is natural looking. No enlargement of the liver or of the spleen. Apex beat is palpable in 5th. Soft apex systolic in recumbent posture. Pulse is regular; arteries are palpable. Knee jerks are a little plus. Grasp is pretty good in both hands. Both discs look normal; an atrophic patch just below the disc; no tortuosities in the artery.

Paroxysmal Tachycardia

Has had curvus & scoliosis. 2 child affected. Very const.

3 years. For nearly 2 1/2 years attacks at night of dysp
when lie down the head palpates - & often枕骨 for
hours - comes & gone. & gas gives up & the lungs fill
& she wheezes & has to sit up straight. belches when seen
Other times will be like for hours & hours. take the last 4 hours
or so. 2 hrs or as short as 10 minutes. If fall asleep & the
palpates more. attack starts at once. & has to sit up straight.
Has to lie very close in diet. comes etc the day. feels the least least.
The night you sleep will it - pain in finger tips a wrist
& right until actually burst - both hands went & if the
attack get severe it is in the left. until a hand. Pain is
worst always when the heart attack is rapid. Very faint
& cold. but not sweat. Once in winter a cold sweat does
not turn pale. Slips suddenly at time like a 'bounce a ball'
& when goes for 200 + 70 within 5-15". next day looks tired,
worse after night - now.. muscles tired. Still has the regular
flaring

Last night when she thought she had a bad attack her pulse was
at 82. After galley audience heart start up.
Attack has lasted 5 hrs. - with body - & face. Of late a rush of
blood + face gets scarlet - flushed.

1. To rest abd. & get away from down & so on.
rest in am.
2. The flatulent dyspepsia.
3. The bleeding.

Healthy looking woman; good color. Eyes are clear; no arcus. No cyanosis of the lips or of the cheeks or of the fingers. The pulse tension is good. Visible pulsation in the radials. Impulse is full, easily compressed; artery not specially sclerotic; no sclerosis of temporals. Heard sounds are loud and clear; first is flapping and valvular. Towards the apex it is unusually flapping. Over the apex region a little tender. No murmur at apex; a little suggestion of an echoing rumble in diastole. The thyroid is not enlarged. The upper limit of cardiac flatness on 4th. Manubrium is clear. There is a great deal of flatulent distension of both stomach and colon. During the examination in r. p. the heart action not rapid; no tachycardia; no gallop rhythm. Lungs are clear; an occasional piping rale on deep inspiration.

Sam Dr Frankel R. 10.04. Mrs B still has all the - 1 leg
stop. with a flop.

XI-10-04. She looks well; color is good; tongue is clean. Pupils react well to light. The pulse is regular, 80; artery not sclerotic; an occasional drop. The temporal arteries are not sclerotic. The brachials are not palpable. Heart sounds are clear at the base. Aortic second is ringing. Clear at apex; no bruit. In recumbent posture upper limit of flatness on lower border of 3rd. No flatness over manubrium. Right border of heart dulness just at the mid-sternal line. Second sound is transmitted loudly into the arteries. Edge of liver is just palpable.

as well all July & I. fishing. all day. had
dyspnoea & head a short while after. dyspnoea in bursts & got worse,
& in open bed a weakish turn - heart intermitting did
not faint - occ. recur. after that 2 or 3 days Campbell
nothing organic, some clear nothing matter. Wind fishing
face swollen round eyes - fat cold & body cold - & hands
swollen a little - body not swollen. - face a little swollen
esp about the eyes. This was 15 Aug. went out a day,
walked some - up & down. Difff & go round. no strength
feels like lead. - tired at once - dragging round with him
at that time a certain species. Came smooth last Friday.
some days feels well after bath. None etc. 2 or 3 days nothing
in it. Not sleep in bed without lot under bottle of fat.
so horribly cold. Hands are swollen very dry. Skin has
got dry & hard. Hair is coarse & diff in button collar been
the fingers are numb. Color has changed. no naevi
~~no skin lesions~~; eleven inches

Height 5 feet, 11 inches. Best weight 200 pounds; now 183. His
face looks a little sallow and yellow. The eyelids are puffy.
There is a little swelling and oedematous condition of the eyelids

and of the skin above. The face looks a little swollen and a very waxy, yellowish look. The tongue is clean. No special swelling of the ears. The skin feels a little dry and hard. The hands are unusually dry, a little bluish, and they are distinctly swollen. Rash is marked, in a way that is quite unusual he says. He thinks the right arm is a little swollen. The general surface of the skin of the body is unchanged, except that it is a little dry. The pad above the left axilla larger than above the right. His speech is husky. Flattening in front of the trachea; no thyroid gland to be felt. The skin of the trunk is dry and harsh. Spleen is just palpable. Edge of liver just palpable. No enlargement of the lymphatic glands. His expression is slow.

Dec. 16th, 1903. Remarkable change in his appearance. All the infiltration has gone from the face and eyes. He still looks a little sallow. The dry appearance has gone from the face. Hands are not nearly so dry; the roughness has gone from them. The stomach is very much out of sorts. Tongue is clean. Pulse has gone from 50 and 55 to 82.

July 20, 1911. I kept in touch with this man off & on. He had to take thyroid gland extract fairly steadily. While it he was perfectly well. He died of pneumonia about 1918.

c of ~~Herr~~ Rh. about 5-6 1/2 yrs. badly in legs & legs - all over now in hips. in bed. for 2 or 3 days when get over it. no swelling no redness. Weather did not affect him to when 15-16 would get so bad have to drag to the floor or another. none in hip. Has. been walking since 97 till last May. Then drove to N. 12 miles. Red am feel little pain acted. Friday. Rh walked on left ankle 2 rollers not red sore. hip - terrible lame, in back & in left hand & suffered agony for 2 days. no fever. no sweat. No swelling after 3 or 4 days. In beds stayed till June 1875. and got for month then left hip. Left hip still sore of 2nd day had bad time with it. now sleeps badly. Aug 1st. on back has thro' chest. lower part. Pain comes in. - no palpitation with it. Got graver, the face, & lying in bed - Dr Carr. gave him chlor - left 1. Last Thurs. came back. & some ever since. not all day. up off when lying down at night.

to Tonsillitis

He looks healthy. Tongue is clean. No enlargement or soreness of the smaller joints. Nothing in the elbows, wrists or shoulders. Nothing in the neck. There is a little inequality in the

hip line. The outline of the left hip is decidedly fuller than the right. In the erect posture there is no special soreness. Motion now is not painful at all. In the recumbent posture there is less difference noticed. A little sensitiveness over the hip just behind the greater trochanter. Just a remnant left of the trouble in the hip. Apex beat is in 5th, ~~just~~ inside the nipple line. Heart's action is a little irregular. Soft mitral bruit, more marked in the recumbent than in the erect posture, increases in intensity along the left sternal margin. Rough aortic direct bruit propagated into vessels of the neck; no diastolic even after holding the breath and on exertion. In the erect posture the apex beat is felt directly under the nipple; its maximum is in 5th, ~~in-~~ inside the nipple line. Absolute cardiac flatness on upper border of - 4th. Liver is not enlarged.

July 20th 1922. This patient died in May 1922. From some acute disease - probably pneumonia - I saw him - not professionally - in August 1921 - when he seemed well to ordinary inspection. He had carried on a very large business for many years before his death.

Feb 12, 1903

Mr Clark - Blood Exam.

The drop as it flows from the ear is of fairly good color; rather fluid in consistency; puncture bleeds freely.

Fresh Specimen - Rods about of normal diameter; no special variation in size or Rockwood rods; rods possibly a trifle pale. No nucleated rods seen. No apparent leucocytosis.

Blood Count.

Rods - 686,000 ???

Whites - 4,000

Hb - 62%

N.B. It was 1 hour after taking the blood that I was able to make the count. It was then observed that there were numerous blood shadows indicating that there had been an haemolysis of the red cells. I noticed that on taking the specimen with Tissot's Soln that it formed immediately a peculiar looking mixture. As this Tissot Soln has always behaved perfectly before, it suggested that there might be an increased vulnerability of the rods. This was rather confirmed by the dense tufting of the plasma between the cells in the stained

Shearer.

I consequently do not feel that the red count
is correct and if it were possible for the patient
to remain I would like to make another count
with a fresh Tison this afternoon & would let
you have the result report at once.

Differential Count -

Small Mono ²	-	20.0 %
Large " "	-	9.1 %
Transitional	-	5.0 %
Polymorpho ²	-	62.5 %
Eosinophiles	-	3.3 %
Mast'zellen	-	0.0 %
Myelocytes	-	0.0 %

No nucleated reds seen - marked staining of the
plasma.

9/13, Fletcher

Feb 13. 1903

Dear Dr Osler

Mr Black came in again for a blood count this afternoon.

The result was as follows

R.B.C.s	-	924,000
W.B.C.	-	6,000
Hb	-	61%

The red count is still surprisingly low. With the absence of the morphological features of pernicious anaemia, particularly the absence of numerous macrocytes, I am at a loss to explain the high color index. I had no reason to suspect any fault in the technique this afternoon. The red count yesterday was 686,000 + Hb 62%. There was undoubtedly some destruction of reds yesterday owing to delay in count.

I saw him with Dr Harry Thomas, 3 years ago.

10 1/2 years ago well & strong P. f. h.

He died 5-6 years ago. No trouble that he can make
of. Neurosis. Desires comforts. & had times a
depressed. No trouble, but 2 wks ago in a turn & local
phys said valvular defect. Tightened never in 87.

Phys knew in 1884. No syphilis, no gonorrhoea.
A b. in 5' not outside nubile line. Run in left heart.
No thrill at a. or b. Visible but deast. soft at apex.
along L S in. loud deast. at ant. arcs &
over whole mammae. very intense double murmur.
more intense. max at aortic cavity.
2nd sound not heard. No tracheal coughing. No
dyspnoea shortness but a distinct slight visible pulsation
in 2nd right. arteries are soft not sclerotic.

Remarkable case - no symptoms. no shortness of
breath. no pain.

In Sept. 1903 shock. a fine gash exterior & upper.
very bad & turned over half a mile up & down. well
then a small cut a month. only two feelings in
heat a going out & spent. when he got them.

big red cheeks & nose - dilated nostril. small brev. woman.
no cracking of the skin. joints give way

4 yrs went to 160. Saw Dr. York Davies & took his
opinion..

There is no sclerosis of the arteries. The heart sounds are clear at the base; soft systolic. No throbbing in vessels of neck. No enlargement of the thyroid. No special throbbing in apex region. Sounds are clear, perhaps slightly murmurish over the body of the heart, particularly along the left sternal margin and in the pulmonary area. Definite throbbing in sternal notch. Abdomen--liver is not palpable. Spleen not palpable. The upper limit of the heart flatness is one 4th. Feet are not swollen.

X. 11. 04 . weight now 186. - has Glen-Springs
for 6 w. & then to Danville. has all track 3 miles
a day. Taller now.

She has lost 38 1/2 pounds. The heart no longer troubles her. The pulse in the recumbent posture 92, quite regular and of good volume. She feels the stairs. Definitely tender just opposite the third rib. Heart sounds are clear at the base; both are rather snapping and valvular, but perfectly regular. Flatness is still high. At Watkins Glen until July; Nauheim treatment.

V. active. 4 g in c. year. one sec. worried. Went to Cheyenne & the west. 2 yrs. Miss. cont. went to Japan 33 yrs ago. very active life. must opium etc. & after 9 g. palp. trouble which now on - inter. pulse appears 23 beats ago - every 3rd or 4 th beat.. At intervals passed ever since. took a long rest 2 y. but over time when reared pulse intermits. Last winter (has used stimulants & tonics). School swept away. 3 ½ yrs. left me worried. Held on. but evg. became more marked. a great shock - upset me. almost kill & run in work - unnerved me. Felt had to go on. - at end used up. Then crowded. & had to get off at a jah hotel - collapse came in night (8th of Feb) Pulse not strong. got back in May. Heart very bad. No pain - but heart weak & intermitting. & pulse & hardly beat & have my. was in bed & was a lot & still. Pulse better & wish on journey - Pulse normal. & good ap. Went to Maine just summer. Pulse regular, coming & going. & getting settled & strain a which again. every 3-4 beat. Not short of breath. Beat w- 150. now 150

Dr S. Linn

The pulse is irregular; drops every third beat, sometimes every second beat; often a small beat can be felt. The vessels are a little sclerotic. A good deal of throbbing in apex area. Wide-spread impulse in praecordia, moves the lower sternum and the front of the chest. A. b. in 5th, just in and outside the n. l. The shock of the imp. is quite forcible. Slight inc. in area of transverse c. f. No murmur at a.; just a slight bruit when he holds his breath. Three beats follow each other, and then the 4th is interrupted--two sounds, possibly three, in its place; then a long pause. It sounds as if the 4th beat had run into gallop rhythm; singularly uniform, it can be seen and felt as well as heard. The fourth beat is short, and two distinct impulses are seen, just like the flutter in a gallop rhythm. At the a.c. no murmur. It is remarkable that he does not have any subjective sensation of the forcible impulse. In r. p. no murmur; marked venous imp. on neck. The pulsation in the jugulars is very uniform. The interruptions in the aortic pulse are not seen, perfectly regular, about 34 in 24 seconds. Liver is not enlarged. Spleen is not enlarged.

C head and numbness in legs &
now in walking impaired for 2 weeks. This has
3 attacks. 1st. att. 18 mos. one leg & one arm
Ht., lasted 10 days.. Came on noticed cold
not walk. did not loss power control, no fall
or convulsion. In usual habit when son one
was in April. 1803. 2nd. in Feb. 1804.
began severe pain over eye.. much in
side of face & ac half. right.. must t cont
not numb in hand or lg: no loss of power
in h- or leg. Face not drawn. Started in
3rd attack about 2 w before this. none came
suddenly. This we not. in rt leg. first in
calf felt hot & rt foot. but left felt nothing
later tested & could not feel marble pebb
cold. & a prickly sens. in rt lg. Hand & arm
not affected. & face not affec.. In later visited
by in other part numb. One n. pain in left
side. Dr gave much

R. J.

He has lost 25 pounds in weight. Numbness still persists, but it is better. Pretty healthy looking fellow; perhaps a little pale. Pupils are equal, react to light. Movements of all the facial muscles are perfect; movements of the eyes are perfect. Tongue is protruded straight. The tactile sensation is perfect on the face. He recognizes cold. Station is pretty good. He can stand on the toes and on the heels and on either leg. The knee jerks on both sides a little two active. Tactile sensation in the legs is good; no retardation of sensation. Painful sensation present. Liver not enlarged. H. s. are clear at a. and b.

slim - heart.. has belching over of water
heart colic lasted . In Saranac Lake . an attack
jumps & severe . - no fainting . Has had ind . for years.
not abt present . Lost 21 lbs in a year . - Hand & feet
asleep when walking . every arm & ring finger get numb
and cold as of dead . Poor circulation .
one finger gets white . & cold .

Cannabis care - see collapsing pulse . murmur scant .
audible at a.c..

To me - 8ly ch .

She looks a little thin; tongue is clean; pupils react well. No soreness in the abdomen itself. Marked throbbing of the abdominal aorta. She has a very relaxed abdomen. Right ren is freely movable. Apex beat is in 5th; marked systolic shock; slight thrill which feels systolic. Both sounds are loud and clear at the mitral area. As the sternum is reached a definite diastolic murmur; heard best along the left sternal border, loudest opposite the fourth, only just audible a at the aortic cartilage. Clear over the manubrium. Slight throbbing in vessels of neck. Pulse is not collapsing in quality. Both sounds are very loud and ringing over the whole cardiac area.

Renal Tumors.

[REDACTED] 50. Washington D.C.

Dating since 15th of Nov. In Hosp. for typh fever 3 weeks not severe, never indis before also another ailing - lump in left side. life has changed 2-3 yrs active - incamp & saddle - some stem in off's not the usual good appetite. till typhoid. certain foods didn't upset. gen. appet & feeling of pain in left side & sacrum now bad. Contin. ache. Food makes it worse, & has often eating & sleep in the day time ^{at first} never in day time but at night. below 10 a.m. & now indis at so much. for about 2 weeks I did better until in the day. No vomiting - no belching. Lost in weight from 212. to 163 color good. Has not been taking as much food. No diarrhea. Liver not. clear urin. const abt past 6 mos. no yellow. Liver tests. clear urin. const abt past 6 mos.

P.H. M'70. ty. diag. in '80 married for in Dakota. in 192 chills & fever. Florida. & in 1898 not urine. 92-96 renal calculus. passed gravel & aches in back & sharp cutting pain in rt side - none since 1896. No pus a little blood.

A very healthy looking man; very good color. Tongue is a little furred. The abdomen is flat, natural looking, a little wasted, no

sign of any bulging, no peristalsis, no shadows. The left cline is fuller than the right and a little fulness in the left flank. Occupying the left side, filling it to the back, easily palpable with the two hands, is an enlarged kidney. It descends with respiration. It is irregular on the surface, not painful, extends anteriorly as far as the middle line, very freely movable, very firm. The flatness is as high in the flank as the 8th rib. The colon can be felt in front of the kidney. The heart sounds are clear. In the sitting posture no special difference between the two sides behind, perhaps a little more fulness on the left. No encroachment upwards on the pleura. No friction at the left base.

Graves disease - from past.

(Indianapolis)

1605
Dr. Page, &
Dr. White

18 Dec¹⁹⁰⁴ grippe - cold & some trouble with nose
blocked - Dr Page said - they said gland swollen. never
before - seemed to come on about 20". Thyroid
swollen to 100. took 4 a day. lost 18 lbs in weight. no
effect on the gland - got nervous after the tablet. Had
been overdoing for sever. years - but not recently now.
no fainting. taking light drugs. M. d. 65. one sister
has swelling of the thyroid.
no heat or rashes - in fact des. - fever is very well. urine
easy. Has been at Cornwell-Hall for 2 mos. May 5th -
feasted & has been better.

Is shaggy - brownish deposit. is flushed.
p. 100. regular - good volume.. no pronounced
ges. lack of convergence marked. Both lobes
of thyroid visible - and not very slight, on
the side. but up to the mass. marked healing
& hemorrhaging. went over the gland - no mass.
Extremely mild form of the disease has

March 27th. 1907.

1. Rest. as much as you can - not see too many people.
2. Ice bag in neck.
3. Eystatin gr. ii. t.i.s.
4. April 1st may.

{ Good appetite.

looks well, colour good; a little tremulous, face & neck still flushed. The veins on the back of the hand not pulsating. The radials are full. The neck is a little enlarged on the right side, only the right lobe affected no increase in size. The heart sounds are clear, action is visible, no murmur. Soft murmur over the right lobe over the upper sternum. When she sits up murmur is heard at the apex, not transmitted to the back; not the slightest prominence of the lyle no ~~stillwag~~ sugar, measurement of the neck over the greatest prominence, dralon tightly

June 28th 07. In her 7 weeks most of time used ice bag, did not walk. ice bag - continually. ~~had~~ Did take the eystatin for 2 months no trembling at heart, improved less, the better, cannot yet claim without feeling the throb, less & much better - has gained in weight. h. still takes 120 now in sitting posture.

June 28th. 1907.

The tremor is much less. There is not the slightest protusion of the eyes. There is still a little swelling of the right lobe. The heart's action is forcible; a shock of the first sound is very marked, soft bruit with it which becomes more intense towards the base, heard over the sternum, but not heard over the gland; very distinct capillary pulse. The superficial veins are not engorged; no pulsation.

April 19th. 1906.

Dear Dr. Taylor:

I saw your patient, [REDACTED], on the 16th. I asked to have a radiograph taken, and I enclose you Dr. Bruce's letter. I have not yet seen the prints. I am leaving for Germany to-morrow and will be away for ten days. So far as I could make out, I do not think it is a case of disease of the bones, nor has she had the pain that is common in the pressure from tumour. It does not seem easy to say upon what the spastic paraplegia depends. If the prints show, as Dr. Bruce suggests, signs of very definite lesion in the caudal equina, the question of operation will have to be considered. I shall be away for ten days. At the end of that time I should like very much to hear from you. I suppose in a case of this long standing she has probably had modide of potassium. If not, I would suggest that it should be tried meanwhile in doses of twenty grains three times a day. Please see [REDACTED] and let him know my opinion. I have not time to write to him before leav

W. a baby. w., 18 $\frac{1}{2}$, lbs. - not well as baby - mother died. - early food very ill & wet nures. - Nurse ill reamed. Some then revealed attacks of liver & stomach. always. redness & pain & fever. bad attack at 1 $\frac{1}{4}$. & then every 2 mos. not longer than 6 w. from 1st. until 1 $\frac{1}{4}$ year in stomach. & then so bad he could not walk. not much vomiting.

(3) Diarrhoea.. Fever 3 - days.. pain 4 - 5 - days.. abd swollen. was world small & much. Spleen was found enlarged. 4 - 5 - days numerous & large black nures. & one of the worst. had at 5. came suddenly over blood. urine was said to be affected. After this all: no swelling of joints. Fever & heat rash. his legs bandaged up. with 100 degrees of abd. Dr. said chicken pox., legs & arms & back & abdomen always. with abd. attacks. would have past me as other died out. Heart spots & urticaria. Now the last attack. no symptoms... little eating kept on them. T. often 95. & 100. 95. & 105 & even more. Other fits - hot. In 1907. only two in the year. slight attack in summer sick. no night. Strangely, in a better town. During the winter though, attacks. Some ~~so~~ 2 children died as infants. 2 girls living, 14 & 15, perfectly healthy. Very good care. - attacks evidently of great severity -

He is a healthy looking boy; good colour; he weighs 4 $\frac{1}{2}$ stones; tongue is clean; teeth are good; skin of the face clear; his chest is well formed, good expansion; abdomen natural looking, no distension, everywhere

soft, no tenderness; descending colon
readily felt; Spleen not palpable; pylorus
not palpable; no distension anywhere of the colon;
liver is not enlarged; right kidney just
palpable; upper limit of liver flatness is on
the 5th; apex beat 5th, normal situation;
Superficial cardiac flatness on 4th, left
sternal border and just inside the nipple
line; heart sounds are clear; second pulmonary
snapping; joints nowhere enlarged, nowhere
tender; no fibroid nodules; the skin is
everywhere clear, nowhere any trace of old
spots; back is clear; reflexes are normal

Mitral. canon care. until I should say - not a good result tho. the valves & well maintained. 2nd class risk

copy in back of specimen

The general appearance and condition excellent. His pulse is 100 in the erect posture, 92 recumbent. There is no sclerosis of the superficial arteries.

The chest is well formed, the precordia slightly prominent; apex beat not visible; moderate pulsation at ensiform and lower sternum.

On palpation apex beat palpable just below the outside nipple in the fifth interspace; no thrill; shock of second sound palpable.

Superficial cardiac flatness upper border of fourth rib, right sternal margin and 2 cm. (about an inch) outside the nipple.

Auscultation: a loud systolic murmur at apex heard to the mid-axilla, obliterating first sound, second sound loud and snapping towards the sternum. The murmur increases greatly in intensity and the maximum is over the body of the heart and the fourth interspace. It is very loud all along the left sternal margin. It is not heard at the first right interspace and not propagated into the vessels of the neck. The aortic second sound is loud and clear.

The mitral lesion is perfectly compensated. It has probably resulted from some infection in childhood, or from the severe influenza seven years ago. He has no shortness of breath, and the heart's

action does not become excessively rapid after ordinary exercise. Barring the accidents to which such cases are liable--e.g., fresh endocarditis in a slight rheumatic attack or any infection--it is the condition of heart that may remain much the same for fifteen or twenty years.

Boston Neurosclerosis

Mrs. ~~F.~~

Chesters Norham. R.S.

1st 4 a.m. 1st symptoms came on while out walking panting & feet
giddy - tight & hot worst. & has to paint it out. Some then not again till 2nd
a.m. same & 11/2 hr after '9. While in Brussels 3rd. not at all. In 2 or 3 year
off & on, clearly worse each time more often. Sudden onset & sudden so
lasting 2-3 days. Last 3 or 4 days of April came on & does not left + 14 days
before a doctor. & then suddenly a violent red flush & needles in fingers. & rest
of tingling all over body. In this case when bad while sitting still - only
difference never cramps from sleep - not attacks in bed. Anything which will
affect nervous system, overalled thing will catch it. less with cold than
anger. If goes up stairs will have it. Has not been able to walk for a week. &
now in bath-chair - off bed 6 or 7 last year - May & June, better. & the
heart got quieted. & got up in Bath-chair. Then better "bucked up a bit"
came on again with panting. - not a short. but a deep breathing as I do.
last bed.

P.H. w & sl - as yet till went to Paris & at school. 3d. slumped; audience
a man. All audience. went on. Home - picked up no th. f. Had no
ch. pox. wh. const. - r. h. const. singing. At ballades etc. worked hard
still singing. - no singing. P.H. F. ver. & highly strung. m. not.

P.C. looks well. good colour. not neurotic - nothing. P. pebble rubed 104.
no tremor. no t. b. no galv. H. a. raised a can be felt. short of it pal. no thrill.
no murmur base 2nd apex 3rd. - no presysl. after cold very rapid. & she begins to
paint - rather deep & very breathless - heart, action very rapid.

1. Live quiet life. avoid work - not over do
2. The Nor. slush & age ch must when walks in
3. Breathing becomes rapid & am.

July 27th. Unrest in Rome - good, better. in Rome some attack
came off by degrees decreased & in last 3 days had
any - 2 yr better & good. less in severity - but one not
much June 20. Thinner longer & one as regular as clockwork

before storm, - not far from a mud. an allad. was short of bn. when got up
no real revenge, nor attack with she has sat down, or have her legs up
able to do everything. Not upset. walked a great deal. - Not bad as she used
to get used. will bring it on. Eared - not disturbed at night.
A throat spender has seen her and adored her like a rock.
She breathes thro both nostrils - exactly especially without mouth
The two prominent teeth and her mouth is always open. but the
mouth is not big

Last 4 mos same lost w. now & some down. Lost 130 - 25 in last 7. 2 or 3 mos ago lost of aft. or sweetys. lost last meal. and. posterior. & also found blood in it & mixed with pers. Diaph. & and. worned. Dr. S. went to Eng.. came away 11 dgs ago in cloud. always spat up blood. was in throat - always in clearing both. water is blood stained. & little by green with meads. 1/2 h later Gibbs throat. no vomiting of blood. but of my voice in wasting. not heat. (Dr. Warren said post op but st. tube in throat st. of man & when) London 10 dgs. not doing much. Worned 3 mos ago. sleeping well. 2 or 3 hrs written. diet. gen. out in air & heat. not much sleep. no des.. bad teeth

1)

This colour is pretty good; mucous membranes red; tongue is clear; teeth are good; a little tremor of the hands; pulse regular; abdomen flat; natural looking; lower limit of the stomach just at the navel; marked clapping movement;

vertical area of stomach tympany under 10 inches.
The edge of the spleen is just palpable; liver not
enlarged; no pain over the stomach; pylorus
just palpable; no visible peristalsis.

Heart = apex beat in 5th. inside nipple,
no thrill, no forcible impulse; no enlargement
of the heart; lungs are clear in front; good,
clear breath sounds everywhere; percussion
clear behind; nothing on auscultation;
pupils react; knee jerks are normal; skin
reactions very active.

Post-paralytic paresesthesia

Sept. 23-07

Liverpool. J. B. Thompson
Springfield Ohio. (C. Mr. (Constantine) C.
Paris Thos Cook & Son

Dr. Wm. R. was ill 3.2 yrs. Vertigo very short from it. No
loss of sens. for a month perhaps. Right armnumbness and numbing
now. Thro. a little band of throat. Vomiting spell caused it. Left
up in the side - did not know it until put hand in water &
found I was - cold for while - & then became sens. & cold. & so so
as. decom. and other. A painful condition. 2 years not able to do much.
Still dysaesthesia. I have flushed fingers and lost in short. Headache - none.
and. E. h. pretty good. a little sensitive. burning in the arm & then all
at time - is actually cold. - no diff in feet. Pretty well - except
burning in head - when headache all. Malaise when going.
Dull headache. Pain etc. cannot walk much. Massage does not
help. 2nd year. rubber inflated them helped. - app. good & dry. good.
Temperature. not much loss.

A very healthy looking man; good colour; the only thing
noticeable a slight droop in the left eyelid, which
he says is worse at times; Sensation is perfect both
sides of the face; muscular movements of the
face perfect; tongue is clean & to put out
straight; no difference in sensations of
temperature of the two hands; feels where his
fingers are; Sensation of hot and cold
perfect; muscular movement perfect;
small muscles of hands strong; only has
trouble on 1. leg for 2 yrs.

The paraesthesia feelings down the arm & leg; pulse
is regular, 80; vessels are not specially sclerosed;
blood tension moderate; slight throbbing in
vessels of neck; apex beat not visible; no
enlargement of heart; soft bruit at the base;
heart sounds are clear; liver is not enlarged;
Spleen not palpable; the right foot looks natural;
reflexes are normal; knee jerks are both
active, not more on one side than on the
other. There is no ankle clonus; stands
well and on either foot; no swaying.

He has a fairly good colour; looks better in the face than the body; very marked vasomotor reaction; long scar over the upper dorsal region; the scar of an empyema operation below the right scapula; the spine is straight, the mobility perfect.

Heart sounds are clear; lungs seem quite clear; a very high position of the stomach, below reaches just above the level of the gravel.

Abs. Fever?

Dr Brumfitt
Sept 22 1908
St Brown. 32 Derby St.
(of Penang)

Mt. Gaomin

[redacted] 43. Healey

In May had fever & then got pector. colic. and then attack. 24th 5-30 am violent. ^{ruminal pain.} had fever 3 days before. in bed. 103° - caught cold no pain. & then end-pain - - fit of stomach - mephaeini. Had append. 24. ago. severe pain - was in same way. pain in glands & lower. Attack in 28th lasted a week - & a lump was left to the right. no pain - no other attack of same severity. and only got better - in 5 weeks. This summer getting better. gained in weight. Taking exercise & golf. until . On 28th of Aug. a new attack of fever. chills. - T. 103° in eve. 3 days after developed pain in the liver in the back no pain at first not noticeable like the other attack. no pain again. (no lump again) not a good pulse at the ball. but swelling at ball. Fever last left today night. Coming on in fits. over 100° - no pain except when down deep breath or far. Tongue furred.

3rd com in the last start. no illness till 2½ years back. winter. no malaria. v. h. life. In Oct 1902 fever attack.

Cold ^{dysenteric} ^{2 1/2} years ago in Singapore - anorexia - then plenty & purum. haemorrhage or blood. not well for 1½ year. the last few months was cured - at Singapore brought up dark colored phlegm - often follows the plenty & mucus. greenish yellow. & - not blood. not like amber sauce

He is a healthy looking man; good colour; not emaciated; tongue is still a little furred; no trace of sallowness or jaundice; Abdomen is natural looking; respiratory movements normal; no bulging on either side; right flank a little fuller than left, probably due to position; right axilla border a little more prominent, particularly in nipple line; chest moves well, does not hurt him, but if sitting up it would; no bulging of intercostal spaces; Palpation--abdomen everywhere soft, not tender; edge of liver not palpable; organ does not appear to be enlarged; liver can just be felt in parasternal line; no actual tenderness; the parts of the liver are not sensitive anywhere; a little sensitive on deep pressure in mid-axillary line in 9th. interspace; right kidney is not palpable. Percussion--liver flatness is a little high in front, reaching in recumbent posture to level of the nipple and extending to the costal border. Behind--no special bulging; perhaps lower right interscapular a little fuller than left; outer half of lower infrascapular region is flat and clear close to the spine; this flatness extends round the front and to about the level of the navel; fremitus is less marked over this dull area; breath sounds are feeble and distant over the dull area, but there is no friction; very decided reduction in the fremitus; heart sounds are clear apex and base; no enlargement of the lymph glands.

Dr Andrews.

~~2~~ [REDACTED] Shreadage - Name

Pain in shoulder - upper - whole body. - Head for 2 mos. Has had cold. been a cold. for year. Sustained with milk leg. Her has 3 children. 3 month old. no trouble. Varicose shd & breath bad. and recently. Said to have Rh fever as girl (?) V. h woman. For 2 or 3 mos shd & breath. For some years. 12 or 15 y. has had an enlarged vein & artery. her husband says. & the arm got much weaker. 2 mos ago she fainted. 2 or 3 min after making an effort..

She is a healthy looking woman: high colour; no cyanosis; the pulse is regular, about 82; pulsation on both sides of the neck; on the left somewhat forcible; it is just above the clavicle, extends from the outer end upwards and inwards towards the thyroid; it is much the same on the other side, only the pulsation not so forcible; no pulsation to be felt just above the sternal end of either clavicle, but it is just at the

outer margin of the Sterns-clido muscle; there is a little throbbing just above the sternal notch, forcible + palpable; Heart - impulse is a little forcible; there is no thrill; sounds are loud and clear at the apex; a slight rumble in diastole; not a very definite presystolic; the pulmonary second is very loud; no murmur over the tricuspid. In the erect posture throbbing vessel on the left side to well seen; it is a little swollen in comparison with the other side + there is a definite pulsation outside the mastoid muscle; it is a little tender there; the left arm is a little smaller than the right - burns a little + gets numb; on deep pressure it feels as if there were a much more prominent spine on that side than on the other; she feels perfectly where the arm is touched; the two middle fingers of the left hand get stiff; no definite presystolic murmur; both sounds are very loud at apex; there is no murmur at the base; there is a definite murmur over the enlarged vessel on the left side; no murmur over the subclavians, just over the clavicle itself.

~~Hans W.~~ - 32 Beechlawn . Ok prof.

1
feeling in head & neck stiff & cannot hold anything. began 14 days ago - suddenly. At 1st 7th ago came numb & could not use legs or hands much - esp. at night. Dr. S. H. lasted 2 mos. went sit in chair - legs were so stiff - drags the leg. over time. only a little at first legs bad & afterwards hand so that dropped things suddenly just had at Dr. Shatt. hysterical fit. - as an a/c a 2nd & left a 3rd nose w/ slight one since. Began with a start now & a spring & in bed the teeth were set & knocked a great deal most seeds. Late 1st hour of the morn not so long - now. after this a memory affected. Left her for 4 mos. one sat. Feb. began again a slight one & last one... now more better. At present number in it have 1 leg. otherwise full well. can walk. Memory better. Dr. P gave 16 lbs 4/p 7. ago in the Thorax was on the dressing a small & got infected. The thumb. was infected.. was long in in bedding was necrotic - bone came out. Dr. thought it possibly syphilis. Dr. Bassett Hall. did not think it specific - knew however it's syphilis friend suggested it. - & it low in system.

She looks pretty well; walks fairly well; no special dragging to-day; pupils are equal; no involvement of the face muscles; right pupil is perhaps a trifle larger than the left, both react to light; arteries are not sclerotic; there is a defect of nearly one half.

of the last joint of the right thumb; no scars especially on skin - one or two little ones about a centimetre in diameter and a little scaly on the surface; grasp is good in the arm; there is no disturbance of sensation; feels the difference between heat and cold. There is no loss of power in the arm or in the leg; knee jerks are markedly increased, more on the left side than on the right; no special rigidity; definite ankle clonus on both sides; well marked Babinski sign; no vesicular clonus; there are 2 dozen spots - two on the back; they are all flat, slightly raised; no indurations of the skin; no special copper colour; walks with a definitely spastic gait, particularly on the right side.

July 26 1909

Dr R. C. L.

collator (Som.)

~~Father~~ [redacted] 61 chemin. Oren

V. L m. & Aug., 1890 - had infl. 2 m. ago. In 95° slight full $\frac{1}{2}$ yr ago sun had attack gas-attack. - well had some pit - & chills after a few pains & - very bad. Full heat in bed 2 days. & a morn. - so said near Jandia. This began muddy - 8 am. & mud by shells often came in grains skin. & ab. Sun in May. - not much till the present. Some thin pains at times - no long series till 5 weeks - & on good better than belly, but now weakness. Jaundice early, a week after a bad belly, but now weakness. Jaundice early, more 3 days after a slight fever 103°. Saw him 2nd visit Jaund. more 3 days after a slight fever 103°. Saw him 2nd visit Jaund. more 3 days after a slight fever 103°. Stools better - losing weight - now inverted. - Jaundice less now. - stools better - losing steadily. Et us. in 5 months.

Looks thin. Veins of cheek & forehead a little distended. Slight but marked jaundice. Tongue is clean. Pulse regular. Slow 64. Abdomen looks natural, a little thin. Marked throbbing in epigastrium. Pulse between navel & umbilicus. No pest. Well marked shadow of the descent of the liver on deep inspiration. Liver can be felt exactly 3 ins. below costal border in the Para Sternal line. In the middle line it extends 2 fingers breadth from the navel. A little tender on left lobe which feels distinctly irregular. The edge is rounded a little irregular. No nodules on surface of the right lobe. Liver does not reach right. Lung tympany is in 6s. Spleen not palpable. No glands enlarged in neck. Appear just below nipple.

Soft apex warmer and breathin. axilla. No cough.

Fainting spells

Aug 1st '09

Dr. Olive
Leamington

[redacted] 60 Learment in

v. h. in - not over strong. break down at 2-4 with. hump. hemiplegia
occurred but instant 3 years had a glau cut out of angle of jaw right mouth
fair health... as young man had inc. fainting spell - at 17. very faint. after a
drive. Then after 10 years had occas bad hump. after indigestion. When so
right off not a bad as half a hump. for a small one felt faint on coming from dinner
table. In usual health a mrd. of ang last year in Learmer after fishing
feet bad. just last week. got off boat, said inshore. Start hump.
Then had 3 bad humps in winter. 1st. coming home (VX) & turned bad before
the fort & there went bad & for a day or two felt cheap. If am home
smaller & felt faint. but not always. After heard no sevral times
2nd gave t party of little girl. start a good deal stood by as began to feel
badly. & stay all night. & 2 or 3 days. no go & slept in bed. 3rd one
as usually. not falling down to dinner - felt - pains. & had the down.
never vomited. but often. but we was mind of way. All right ready & better
Pubic. in all other feels & drops beats. Dr. Olive has seen me we all think
as sevral at least. - Big ad but not too much. - very small ad.
Felts well - lost in w. in winter. W. 11. Down + 10.7. + 5-1/2 in
Often wind. Pulse reg. 65-. not much sout.

(Gibson. May 115 - see 90. P. 72. Res 18. S. May). after falling
gravel - 60

- 1) Fishing -
- 2) Cycle.
- 3) cover shooting.

The Apex beat just visible in 5th. Normal situation. Not forcible.
No pulsation at the base. Slight impulse in veins of the neck.
No increase in area of Cardiac flatness. Sounds are clear
at apex & at base.
In erect position sounds are clear. Of normal relative
intensity.

August 3rd
09.

[REDACTED] 53- Montreal.

3 days before the myxedema began was deferred & 3 days before the treatment. took 100 gr. & found only. (a lady made the diagnosis) Took it for a few mos & had the pain in heart & arm. The swelling at abdomen even worse. She had had a recurrence - now of none for 3 weeks or characteristic facies. stiff & feels - in upper & right scrotum & then dry. Pain so great the time that she could not stand & went up & down the stairs & over down left arm & looks deathly - if she has a burst goes down the right arm & get breathless. no sweat. If she begins now & took 4 1/2 gr tablet in the day in two days she would have the attack - down the muscle - very remarkable. P. 60. - feels nothing in heart. If lets down slips at once - but is so desperate & peculiar. Has for years taken the salvarsan 1st & 10th of each month. but now two days after the tablet a high tho. - left hand gets numb.

To write in a week - rest in bed while taking the tablet.

V. characteristic facies skin condition.

Tension good. Aortic 2nd sound a little
slurring at apex. Pain begins over 2nd
could be covered by a pillow. No skin sensations.
Entire absence of thyroid.

Pulse slow, regular.

but R. B. S., h.w. no govt. one thematic.
P.H. no disease. nothing serious. no epithitis. no rh. fever. no fever.
Sc fever rhythmic. Excr. good but never to excess. 20-25 a day.
A lot of Cramps - likely very little. Food in moderation. not heavy eating. in what he had
P.D. left foot under foot under etc. - you would see him lame. walk for 3/4 hr -
and before that lame. Later on off over time. Excr. cutaneous at end of day.
and stiff for a minute or two. Confined to foot heel unless stands &
in forearm in leg. a little in other parts shorts ac. not red. no stiffy
or pain. would be lame at end of a few walks a severe under the
feet. Doesnt run. Shoe ~~sand~~ different. Style not turned.

b. healthy looking man good physique Good colour.
No tophi. No joints swollen. good muscle. feet are
natural looking. No swelling or redness when hung
down. Veins are not enlarged nor do they
swell specially after standing.
Heel looks natural. Just one point in centre of

heel that is sensitive exactly in the middle.

No sensitive point in the other heel.

Dorsal arteries pulsation well felt in right & in left,
+ in both posterior tibial. Radials are full,
large, pulse good. Heart sounds loud booming.
No enlargement of spleen nor of liver.
Beginning of Heberdens nodes on left hand.

Left 24. 18¹⁰. 3 mos ago began in arm - up & down outer side
of arm - has been on arm - up & down not very troublesome.
Shoulder blade stiff. Does not do. altogether - now itself. - keeps
muscle at right. 6-7 in girth at 2d dist. last few days weaker
with it. G-H goes not away like sunn. In. creased & could not
bear. get ang - "beller"

Looks well good color. Shoulders look symmetrical. No pain in
rotation of the joints nor any pain in handling the joint. A little
tender above the outer side of the biceps & down the back of arm.
At present no disturbance of sensation in the forearm itself.
No actual tenderness in the muscle itself. Nor in the course of nerve.
No special sensation of the ulnar nerve behind. Muscular power good.
No wasting of the muscles. Heart sounds clear.

V. V. & S. - Only age. 2 1/2 years. Measles not bad attack. no
F.H. F. w. 80. S. 140. H. 11. Lungs 15. abdomen 15. Bowels 9 lungs & well.
S. f. non typhoid. Sore throat - no troubles - not much fever.
P.T.V. when in Balt 2 1/2 passed a shot cold and tell when - was sickly -
could not walk well - had asthma. Vision bad. when jogging is bad.
occ. better. Can see better with one eye shut. at home so bad can see
see at all. one eye same as other. Last Dec. losing sight. 5-6 hrs
a day (in & out more all day) - one time can see another. Can read
at times - but for it was not read the newspaper. Glasses not so good
now as before. Books hard. Toh. no acute pain. Dreadfully in busy place.
Last Sunday in River - a bird hit eye and. Under eye all hurt. Had good
exp. 7. 7. 20. Smashed up. eye now in one. swollen still a long time. do
now in head. Both weeks & got on not well for a year. Examined by
Balance is hopeless. - judgment of distance not good. Bab. bad for
2 y. has to walk for side & side - sometimes stagger (Mrs. Beebe has not
seen it) but will an effort can do it. Has never fallen. Knock &
stagger going up a door with; an arm around him. Worse in dark. One night
had to get off. Distance. if sleep down a step cannot tell if step or
shallow one - He make a wrong shot at putting in tooth. no trouble
with falling things. Full, speak & well now. Henderson nine -
& sleep well. This can. can walk 14 hrs. Mrs. Beebe said not seen
her for year. no change. Giddiness. some Dec. no rhyme - reason
has to hold on - sees nothing - can still - even at best. - words well
no difficulty. Shut eyes. ~~way~~ while she sat her she saw all room
more. - Mrs. B. & I. & argued after a walk. - now almost still. & could recognize
Mrs. B. changes so rapidly - but not a shot ten minutes in abd. could
do. Hymen. upon which one cannot can we count. now seven fours
cannot tell me what - can tell a common. that is all.

Looks well good colour. Nystagmus lateral, curiously
variable. Much more when the eyes are turned far
over. All the movements of the eyeballs perfect.
The pupils are equal & react to light.
Habits. All the movements of the muscles of the
face perfect. Movements of the neck perfect.

Hands, no. v.m. trouble. No tremor.
No voluntary tremor. Perfect control over
movements of the hands. Feels the lightest touch.
Stereognostic sense perfect. Feels count well. Feels
difference in weight. Station is good. Stands
well on toes & in either leg. Gait is
good no special swaying. Feels as if the
were drawn to the left. Knee joints jerks are active.
no chin jerk. no amblo clonus. No Babinski sign.
Arteries are normal. No thickening of any of the
vessels.

Heart action
good.

He is a nervous man; fairly good colour; pupils
are widely dilated; Contract actively; tongue is
clean in front, furrowed at the back; hands are
moist; muscles are thin but hard, no tetanic;

abdomen is flat; stomach tympany is low; organs relaxed & somewhat dilated. The liver is not enlarged; spleen not enlarged; heart sounds are clear apex & base; glands are not enlarged; vasomotor reaction very active; knee jerks are very active; station is good.

Arthritis +

Oct. 18th 05
Dr Wild. (Beth.)

Miss E. H. [redacted] 51. St Petrow Nailsworth

c of 13 yrs. fall on knee. Since since an external lameness in left - not in bed. Still in a wooden bed brace - all lameness gone since. No other joint affected. & after over 3 yrs ago. marriage last Aug 1st feeling in left 2 stiffness. All went well the marriage. but - marriage set up after weather & tiredness of both legs. & not cured. Two better - 94 good. Both legs & left better - in health. - now both legs cannot run. - not walked lame. - in am stiff. uncomf. feeling & few aches. - no bony calls in rev. syst. G. Farm Hrs now & out - but never. V-h. till 50. no illness. very strong. now incapable of doing anything. 3 yrs. feel. (1) in hips & in lower part. (2) down legs - a strange feeling - must sit down. (3) do not give way. & has never fallen.

+ my

send word. (1) as to cause of life

(2) treatment. massage. - no mass seen. 2 months.

(3). - Treatment.

Healthy looking woman. no thickening of the sub joints.
no pain on motion of the arms. no swelling of the ankles
no pain on motion. Both knee-caps are perfectly free.

no pain, no swelling about the joints & no tenderness behind.
Lifts both legs well. Right is let down less easily. When the right
leg is flexed the whole pelvis moves, & in certain positions,
particularly on rotation it is painful. Marked difference between
the two: the left leg can be rotated easily. Tender directly
over the head of the acetabulum. Heart sounds are clear,
pulse regular, good volume, good tension. No enlargement
of the liver. A little tender just below gall bladder. No enlargement
of the spleen.

Looks pretty well. a little thin in the face.

Cold off lips good. Pulse regular. Seems healthy.

Abdomen looks natural. Flank lines are equal.
Splenomegaly in lower Zeracic zone. Descending colon
easily felt. Left kidney not palpable. Nothing to
be felt, and deepest bimanual palpation.
On right side kidney not palpable. No friction over
the flank. No increase upwards of the
kidney — — behind.

Headaches.

Nov 12/16 09
St. Whitechapel

Mrs. [redacted] 29 358 Banting Rd

Headaches, had all life - 3 or 4 - not so bad as one started for 6 years as child. - Came at monthly period - now often. Other never a period without. not for years. Vom. not us always. gives headache. - 2 or 3 occur as 3 days. & often we get not. never 3 mos without. never a fortnight - frontal. more. sometimes one eye. agr. not sleep. Ord. Dr. Miller had as young woman. bad ones. not now. 10 b & s. We all suffer with headaches. In Eng. 4 1/2 yrs from mutton. never unless sleep. in white cups. Vom not acute; Started hard. - 4-5 music or my hand.

Diet right - abd. - never on veg diet. no good. - living country life. now meat once a day. Last winter I had a week. - better so far. 1st sy. Waller in am with feeling of headache or heat in night & dreams of it - has had 1 in dreams. - come on any time even in am hour will be prostrated. - so bad he had to walk room for hours. - Then, a good diet. - abd. as sole cause of headache anything.

(1) Veg. diet. rice - bread & milk. Ward marmalade. Potatos. Cabbage.

(2) Veg. diet.

Healthy looking good colour. Tongue clean.

The temporal arteries a little sclerotic, radials normal just palpable. No distension of the abdomen. Not enlarged no dilatation of the stomach. The tympanum is a little high. Heart sounds clear. Aplastic pulse.

Gout. & Tophi.

Dr. Griffin
Bauburg,
Jan. 12. 10.

Mr. ~~Hill~~³⁷ Bauburg.

Gout - for 10 - 12 years. 1st indic. pat. that Rh. had red hives.
and bl.

occup. Dealer cattle & horses. not in dep. - F. d. 3 y. ago 75^o, not. had gout but
for 16 y. before did not a limb - no tophi. In above w & st. 70. no gout but
rheumatis. Knuckle drawing lot. B. G. S. 3. none the gout. Pat is 16
416. Habits. began young beer - & has shirts - but has had a rare lot in
his life lot of opium. would drink 2-3 quarts - whisky. 8-10 glasses.
none now for some time.

Allahs has had many acute attacks - in 6 or 7 yrs. now per-
ent - so stiff. T. up in some cases. 3 weeks at a time. a very tender
area. when big was. Knuckle & shoulder, & the knees.
Good ap. always. since Oct. so myself. in summer. pretty tidy. Passes
moderate amount. v. h col.

Healthy looking man good colour. Marked tophi in both
ears. Large tophus over knuckles of left index finger; large
one on left elbow. None on others came first. Both ankles
are a little swollen, the right more than the left. Knuckles
distinctly swollen. Big toe joints are not specially enlarged
and tender. The tissues about both mal. are swollen.
Both joints crook straight knee. The right wrist is just recovering
from an acute attack, a little livid now & swollen. Does not hurt

now. A week since it was involved. Swelling of the outer side of right thumb. None of the tophi however broken.

Small tophus just over right external malle. The smaller pendents are free. Pulse regular 64. Arteries not thickened. Heart sounds are clear apex base. A few wheezing rales in the bases.

Constipation - neuritis.

May 11/10

[REDACTED] 21. (Ballistic) Hill-Hurst Streetly

Conf. constipation since summer - occ as bz. - Begun flimble at 17. bzgs - what seem bad. Then 2 yrs ago had bz & faints 2-3 days. Then flimble something & bzg. without alarm now & occasional flimble a few more... working not hard. - no worry. - weak nerves over done - new breakdown. - rest worn - one late night affect.

7. decd. m. low. 2.6 & 1.5. w & sl. - no del. never.

Diet. 1/2 boiled eggs - br. br. & fruit - ps. lunch cheese br. a slice fruit. 1 am. 3 orders Hail. Large apples -

Rest. weight 11. now below... grad. cutly to 3 hrs a day.

Evidence of v. now worn. - 8nd color.

1. Err. nervous.

2. nothing in abd. (old scan I recall)

(3) Spasms abd.

(4) chest worn

(1) Keep in good cond.

(2) Diet.

(3) Slop med.

(4) massage. three times - small

(5) exercise. daily

Mitral & aortic Disease.
ang. pulmonis furste.
Kent

May 3rd, 1910

Dr. Hardie

~~Mr. G. F. Hart~~ - with 70

C. F. Hart. - as now sitting - of middle build - pain
in breast - long back as 40 years - valves not tight - never had
any attention till last 4 years. walked up hill - pain - never -
had attack - not up neck or down arm - in centre of breast. 2 or
3 yrs. under acc. & had shoulder cut. To dog - when got it suddenly
had it - ~~but~~ of course - after riding in train feels more. not
at night - sleeps well. Eats & drinks very $\frac{1}{2}$ day. - Had attack
of infl. - not more than usual. Of fulminant course. Not eating
heartily - very careful - bowels regular - - light dinner every
night.

Dr Van Ciseen said he had mitral disease
40 years ago. (Father of Drs)

P.T. full & regular.

1. To go slowly.
2. mildly.
3. regular diet.

Healthy looking man; good colour; young looking for
his age; pulse regular, good tension; arteries about
his own age; temporals are quite soft; radial pulses
equal, no arcus. Pupils equal, react well to light.
chest well formed; marked prominence of the manubrium;

no pulsation. Heart impulse not visible, palpable just below nipple line; not forcible; no thrill apex or base; loud mitral systolic, first heard in axilla and round to back; maximum just above apex ~~beat~~. Second sound heard at apex; loud aortic systolic heard up manubrium and in vessels of neck, more intense over manubrium than at a.c.; soft aortic diastolic just audible; no throbbing over manubrium; no pulsation; no tracheal tugging.

In recumbent posture mitral systolic much intensified. Lungs clear; liver not enlarged, edge is just palpable; spleen is not ^{palpable} enlarged.

Hædoas Mevis

Sep. 23. 1880.

Northampton Mass

not very strong - never very strong "well till college" struggle & get thro. Graduated 1884 at Smith. Some teaching in poor school Kansas. in England a year. then in Boston. called to Smith. teaching at Smith about for 2 years while doing a family - strain in vacation - went to Dr Hollis at Cornhill. Fancied much - went back - did college work in 1804-5. A Xmas was just begun & home indigestion - had not had it before. head and lungs - Dr Hollis - said not fellow at Columbia. Went to Italy - got worse. Dr Van. Journeys in Venice. stayed - "Hellenism & Chemistry & not eating well I felt so' & at Cornhill, very ill for 4 mos 1806-7. Stayed here the rest of year. began to get well better since & for 3 years has been teaching. Father died College. and living - sans. 8-10 a week - not have been "unusually tired." Had come work - now not much. can make most of herself - Had gained. owing to cold - feaver'd &c. had bad cough - Throat a touch of it. Came here in June. ill on steamer. very cold. took & tonics - came here. Gainng in w. - point was how much work can I do. Work at Bodleian - 2 weeks in Febt, began to work & study 10-1.

Looks well, good colour, w. about 115. no anaemia.
Coloured lips good. Pupils equal react to light. no discharge from either ear. no tenderness on mastoid. Tympanic clean
Pulse regular, good tension. Slight nervous tremor, no enlargement of the thyroid. Chest is fairly well shaped.
Sternum a little prominent, expansion equal, right clavicles

~~V 12~~
little ^{more} prominent than left. Vasomotor reaction very active.
Slight difference between the 2 apices, on right expectoration
pulverized. Occasionally dry crackle at end of inspiration.
Bronchial secretions tubular. Heart's action is clear.

Oct. 1st. 1900

Dr. Kersh
Wash.

appendicitis

~~██████████~~ a stock manor. London. Br. &
~~██████████~~ well.

mt + Portugal 1808 till Sept. had stomach ache. several days. In Oct. 7th - sd very travel's had ft. pain in rt side - no fever. Dr said append. Home & X-ray. white & pain again Dr K. said append went up. Back + neck Jan 1st. well odd pains at times. not enough of I June Malaria - 20th July. every 2 days. Home & had jaundice - was yellow they would not let him on train. Back + neck Sept 1st. in good condition. Both have one month. on Shanty Harbor. Hart. had bit of bad fish swallowed a lot. at night felt badly. 2 am sick & dark T. 100°. pain in belly. next am Dr comes. said append. hit in pain went to left side. In bed 4 days. 2nd day. Dr. said malaria. very St perspiration. Back to doctor next boat. 11th Sept. Dr. back. Malaria gone & dull pain in rt. side. no more chills. Thirsty & goes on & off & dull pain in rt. side. no pain ^{this am} yesterday a little - always a same place.

Looks a little pale. Tongue clear. Pulse regular. good volume. Abdomen not distended. No swelling in right I. T. Always feels the pain in this region - no tension. easily palpable, distinctly tender in appendix region. Waxes on deep pressure. Appendix not palpable. Edge of liver easily felt. Heart sounds are clear a. 160.

Orthistes spine

Nov 10th 1860

No. 5.

Mrs. [redacted] 62. 28 Walton St.

Came - to you about - had sciatic spine - always -
highly strung spine - but went about & did several days. Then suddenly
banged down - on step of stairs - fell on back & as so often happens
on this venture I went on - - almost any of brain - & another strain &
another accident. slipped & fell a stone floor. 1807. & trao. esp. 1. more the
nerves of spine & began with. but has never ceased since 1807 that lead
to certain affection. Sens. numb. in back - especially; esp. about lower
part. - lumbar comes up on it. weakish wif it. esp. good - deal. digestion
very bad. always bronchitic - in winter - always or more or less. Well all the time
I know it - not the lungs - always choky - a very sensitive throat. Can see 1
the lungs - - not - of the spine. Cannot sit good enough 20 ft. - what a pain
it is that the legs are affected. - cannot go to early church -

Looks pretty well. Spine clean. Spine is a little bowed.
marked difference between the two sides in the lumbar region
marked flatness in right lumbar region, feels it just
about the beginning of the lumbar. No special tenderness along
the branch bands. Does not stoop well; the spine moves
altogether, nor does the spine move back well. There is
nothing to be felt deep in lumbar region in front.

Dr. Bartlett
Waddington,
Bartlett
Nov 26 H. 10

Mrs. ██████████. Corpdy. in Leamington

Head - pain for year - from child had radishes - 30 years at least at first on left side only - now all over. not in family. m. well. B., S₄, M & S. the rattle det. as child well. Had other fever, m. b. aches in head. Head exactly as child. Tell told you long time ago not enough does interfere with the pain - just a heavy feeling now.. No loss in w. no nausea or vomiting. Eye sight good. - bad. Glasses.. At very time of attack of new fever. has burning sense in head &c.. feels it very dry. Funnels feel it for days - a week at least. Surgery - not treated. Church mostly bed. - anague of palpitation & a throbbing a pulsation in head. Gums not raised. Hardly after they began. one night the half of eye brown & often eyelids on top of each, were half turned grey - a remains so.

Grey curtain - deep fluster of transparency. in neck

Looks a little grey. Tongue clean. Palpits equal, react well to light. no sclerosis of arteries. no high tension. Heart sounds clear a. s. b. with a loud mitral murmur, 1st very snapping. Walvular. After beat is a little outside the nippable line. A sharp rough distalic also at base. no enlargement of liver. Spleen is not palpable. Stomach tympany not increased. Slight tremor of the fingers. no enlargement of thyroid. In erect posture the murmur is not more intense. The thyroid is a little full.

Aug 5, 1911

~~Sixty~~~~Four~~ 43

Exeter Lawyer.

Mrs. [redacted] - sent up. 6 months t married. not come
remarkable. V. h. m. no social vitality. had colds. - not high pressure but
fully occupied. 97 H. F. died 20 m. old at 8, B & S. 9. one dog. - 5 in family.
Tobacco heavy smoker - under 20c. alcohol. very moderate. Gonorrhea 1/2, phthisis
elbow & forearm. Temperature 98¹/2°.

Instinct of sex instant. - Walking at night with sister. averse to marriage. not now
much. Eng. 5 mos.. Eng. came on rather a shock. - at bottom is wrong. - during
sol. man the father - mind depressed. worrying time at home. 2 years had to
look him up. Sister. 2 years trying. mother. long illness. 2 sister married
2 brothers - married. o silent. 31. - M. very des. illness. - stroke & for 2 years dictio-
nary religious - a saint. "For me an ideal crusading period." & within a
week of mother death engaged to a girl whom I had not seen since. - constantly
together. She is 22. - Her June and could not face it - mind беспомощна - 300 T. b. 4
for 3 years. Off with this girl - but the girl interferes with work - not brought
up & settled with. M. family - bringing up by trinity. lived abroad till 27 yrs.
Eng. 2nd time I saw her¹. She is an aristocrat. & in addition - beautiful.
"No man comes near her without preferring". & troubling mental affinity.
but fine. Extravagant habits. careless. never brought up to do anything.
"Red-haired girl" & a flirt. -

Her attitude care - nice fellow - mothered & sistered all her life &
then a sudden inflection - now full of doubts - and a perpetual passing of terror
comes over her. She seems frantic. he feels like flying from the other or much
if to have 6 more children. & at end of the time to settle.

Dr. A.

Aug. 28th/11.

M. [redacted] 57 Cairo.

noted a certain numbness 3-4 fingers of left 1st hand - about 10-12 days ago - never anything like it before. not in day. nocturnal in arising - no feeling - had a mass. not improved. numb. now a no strength in fingers.. can now write with right. could not abd
out in fingers.. not in other hand at all.. not in foot. No trouble he.. no
circulation of brachial.. had been in very good health. Had pneumo-
coniosis of brachial.. - has 17 lbs. from cat. v. h. life. In Lg. 30 years. very uncommon.
v. healthy.. Habits - good - & Dr. not for a year.

First bad. 2 mos last year. now toes very - a while in left ear.
gentle massage. but attack 23.3. also. that a sprain -

Looks well. Good colour. nothing to be noticed in either hand
Has all the movements of the fingers & the thumb. can
extend them & flex them. Has good power of resistance both
to opening + closing. Picks up a pencil freely -
easily. writes the name easily well. Feels the touch
but not yet quite naturally. Speech is good. No incoordination
Strength of the arm good. Knee joints normal. Pulse
regular, 80. Good volume. Theartery is not palpable
the blood pressure is not high. The brachials just
palpable. Pubis equal, rect active to lifting.
all the movements of the facial muscles are normal.
There is a well marked tophus on the tip of the left ear.

Heart, a. b. not palpable not visible. Heart sounds clear
at apex. Aortic second is a little accentuated at base, but
no murmur. No pulsation at the base. Liver edge is just
palpable, not enlarged. Abdomen is normal. Tongue clean.

Ecterophthisis & -

July 28/11
Dr. Brausen.
Byrman.

Mrs. [REDACTED] ²⁵ Vayra Mawr.

Mrs. for long time. Has colitis "for years & was until recently
desiring." Is 57 yrs. much nervous. Father died looking & himself 57 yrs ago
on dry sugar. High cancer might also die now with his nos. Father now
much respite. yesterday had convulsions. not much now. feels much better.
Heart green.. about 2 mos ago put all off. Had appendicitis 6.5 yrs ago Standard
6 years ago. "passed the lower bowel" & caused the colitis. Father had many
diarrhoeas. not as much pain - not as much colitis. but much constipation & still bears
markings. 2 or 3 times a week. Never appears. 3 mos ag. sort collapse from
falling blood. heart stopped. to talking. Digitalis. Best weight 136. 20 yrs.
ago now 125. 2 children 8 & 6 1/2.

abd bandaged.

2 Bladder full

Looks very well, a little thin in the face. Colour of the
mucous membranes a little blue. Blood colour like the
blue. Pulse regular good tension. Aorta beat just
palpable inside the nippertwines; not forcible.

Heart sounds are clear at apex slow.
Normal relative intensity, no accentuation of aortic 2nd.

A little tender in the neighbourhood of the apex.

Descending colon distinctly tender. Liver is not enlarged.
Lower bowel full bladder not palpable. Abdomen is well
relaxed, tender on sharp pressure of the testa.

mouth.

w. & st. a girl (Elvina Phillips) mother dead br. neuralgia bad
& father had cold - Head & neck at time - came from eyes. no Fever.
measured. headache in morning. Child born in Sept. 1907. - headache began
before sleep - inf one. Spots regular. - vary - Ch. will & strong. Occurred 6-
7 m. has had examined. in Phila. - normal.. not diet. cause dyspep.
eyes not good. but so below. says always. - sleep well. wake up after 7. & have
at once when wake up - last - to know may be all day. - & talk. asperni
then head & slightly the arm. - last. 5-6 aspirin. yesterday bad. no heat &
some time severe. also called Burns Teller... & cold dyspepsia"
when 2 or 4 had infantile. paroxysms. but got over it self - no trace now
no sc. fever. diff. nor typhoid - no fever of moment. measles.. not bad
from 4-5 dgs. after only born but not until. no sore throat.
From 4-5 dgs. after birth pententis. M. ab. + w. 2 b. & 2. S. well & strong.
7. d. 1. y. ago. 54 died pententis. M. ab. + w. 2 b. & 2. S. well & strong.
M. has had rheumatism & in knee had gout. - no joint trouble. - Head no headache
for 2 or 4 months when was down too long. drawing. & bled. Yesterday & headache still
not large effect. - take little as rule. - strong. rev. with still never a new
weakness can't define.

(1) keep bowel regular - every 10
(2) moderate diet - very little meat - - - is almost a vegetarian
(3) Ergothioneine for 3 weeks after the milking over
(4) Nitro-glycemic gr. 4000. t.d..

(57)

Looks well, good colour. Tongue clean - Pulse regular, recurrent - high tensio. Rectum easily palpable. Temples palpable. Apes heat

not forcible, little outside the normal situation.
Sounds clear, 1st Red loud - aortic and
accelerated.

Dec 27th. no long. spell without - no day without. walks with them
2 or 3 times a day.

- N. G. G. did not come - took for 4 weeks - seemed like headache, more
like cold more than 2 - soon as took - blood went to head.
Systolic. at home took for 2 weeks & in that time - did good - had
headache almost - not a headache all the time. Other when she began
had edema and she could not sit.

Has been taking Dr. S. for 4 years.
& he has had 2 bro. sets. Tuesday & in 3rd feels the difference, nothing helps
with a bad case - last - 12 hrs & nothing stops. not funny of course.

1 - to try the muscle.

2 - urine + be strained again

1911

~~Mr. [redacted]~~ . Morning . Mr H. L. Day. Morris
Basildon Park
^{W.P. Readings}
Mar. Cut - & leg - 7 years go - sun - then dnt, pain. 2^o ago.
of spine 5^o ago . bad attack 3 mos - had t leg still could not move - could
not move legs.. P. I. in 6. m. - it not - was starting car and left hand
back pain & not the 'and' & jained the shoulder. ached the arm - chest
not complain till 3 days - that it in sternum & rubbed it then
seen Dr Evans visited & under him car side. Shoulder not swollen - and
just in the big tendon - in the shoulder. cannot use arm & if hand & so angry
with 'and' it goes numb - pain to elbow. over shoulder - hand & sh.
from elbow & runs it.

Looks a bit pale . well nourished. good muscles. Nothing
very definite on inspection of shoulder or arm . no wasting
of muscles - Sub clavicular pulsations a little more left than
right .

Movements of shoulder joint perfect - most pain when the elbow
is put far back - moves out easily, not so painful when it
moves forward . Has always been able to move shoulder .
Tender all along brachial chord . a little more fullness
in left suprascapular space - Pain runs chiefly on
radial side of the two first fingers . No wasting .

at present no great tenderness and no swelling about
the joint itself. Tenderness is under the trap. and
in the supra clavicular space. No wasting of scap. muscles
behind. Left scapulae a little more prominent than the
right.

Pulse good. radials palpable. heart sounds clear.

Healthy looking, good col. good. physique. gen. cond. good. nutrition g.
Chest well formed, expans. pd. clavicles equal, appears same at apices.
note is higher pitched on clavicle & r. superclavicular. but not more so than
is often the case. Inspir. at ap. less full & breezy, but when he draws deep breath
air enters well & freely. no change in rhythm or pitch, no adventitious sound
quite clear in the sides. Behind these is no change to be noted. enters
freely, no rales on coughing, no change on percussion note.
Heart rds. clear. ap. b. in normal vibration. Liver not ab. spleen not ab.
Lymph glands not. infl. pulse g. & pd. of them, no change in arteries

Dr King Dr Smith
Jan 15th 1914

[REDACTED] 33. Liverpool - above 5yrs.

From 4 to 9 yrs - no trouble after the sun - no arthritis - married 2 years.

Jan 18th - no des. at once but now - pain - feet in & out of bed now are swollen - & more so. & stiff next day. Some felt lumbar & pain in muscles - 2 or 3 days after the accident. Not crooked - Jones' Trunking about all the time - never seems well May - June but : Scratches. Bath & in bed - not able - In bed. 7 w. in spirit. not. Thirst. & employed. on left side + my walking - end of esp. .

Pain in w. - esp. till Dec. when began - & yet come. Pain comes at Dec. in Liverpool. bed. & active days - 3 - 4 hours. Coming. come by time. & pain worse. Has to sit down all now. rest again. & had those rumpia - straight as need as 1/2 gr. - a week. no pain as ab - then.

Healthy looking fellow, good colour, attitude a little oblique, the left hip high; he cannot straighten his spine. Obliquity is very marked - a deep indented left coast line and normal right side. Marked atrophy of right leg both above and below knee.

Measurements +

From behind the obl. is very marked, lateral curvature extreme, a little wasting of lumbar muscles on r. side, & decided wasting of [REDACTED], hamstring & calf regions. Cannot bend freely - fairly well to the right, scarcely at all to the left, and very little backwards. Turns round but cannot twist the spine freely. Not specially tender along sacroiliac articulation, or in the lumbar

or sacral spine. To sit down is one of the most painful things he can do, particularly after standing long.

In recumbent posture - the wasting of the right leg is very marked. Measurement - L.calf close fitting, exactly 18 inches; corresponding point on r.l. 14½ inches.

No affection of the joints, no swelling, skin looks normal. muscles are fairly firm, even in the wasted leg.

Inguinal glands are not enlarged; nothing to be felt in either fossa. There is no tenderness in front below Poupard's ligament. He turns with difficulty; marked diff. between two sides. Tender down the right side.

~~acute Insuff.~~

Had a temporary one! Heart. was rare inf. a Prof. des. & ton. subject.
 + it - after a few hours stopped heart. for hours being
 + others for . could take exercise .. nothing acc. no change.
 Did not sleep - would for hours. Has been card up for a month.
 on two occasions + 1. 15 days ago. lately not so much. Great care
 taken - . 2 m in bed a month. Until last Oct. was able to do
 everything. since fit. rode + dyed a week - only lacking 2 hours.
 In London last Oct. ride on night felt ill - did not know
 what was matter - by morning all night next eve. went home
 wife took T. 102° - in bed. suff. but . In bed a week + after
 that go about but in - abt time found was on bad date.
 depressed + feeling as if heart go wrong. - took. some + some
 heat in evening in bed a week -(Did not tell me I) see
 and 3 weeks - heart was dilated a good deal + blood pressure
 was weak - yet remained by same 6-8 hr. in muscles full
 and dry.

Looks well. not short. wire looking. wt. about 11 stone
 Col. of lips is good, pulse standing is regular, a little rapid 86
 volume good, no drops.

Recurrent posture, slows very quickly, perfectly regular: tension does
 not feel increased. artery of first palpable with blood wave out: brachials
 just palpable + visible. Temporals are just palpable. Ap. beat is not visible
 no bulging of precordia, no pulsation at the base.
Palpation. impulse is not felt in 5th no shock of sound, no shortening
 impulse at base. Bl. press. 135.

Over.

Sitting. Apex b. not visible, not palpable.

Standing pos. before exercise, a.b. not visible, not palpable

after - , c. b. just visible, in 5th, in n. 2.

on inspiration, not forcible, does not lift rib but is felt
smoothly in $5\frac{1}{4}$ <sup>along in 6^{1/2} when breath is forced out below &
just inside N. line.</sup>

Recurrent. Flatness on upper border of 4th just inside l.s.m. + exactly
at N. 2. No flatness over mammarium, auscultation

Auscultation. sounds clear at a per. of normal intensity (this is just
after exercise) relative intensity of sounds normal. No mur-
mur at base; Aortic 2nd clear, not accentuated. In 5th & 6th
in n.l. sounds are well heard.

During whole exam. no drop.

In vessels of neck, sounds are low & clear

Exam. of abd. neg. liver not enl. spleen not enl.

reflexes normal, pupils react well to light. markd areas.

Joints of fingers a little swollen.

1. Go ahead - live. - any live, - ^{node} - avoid names - none now.

4. sluggishness

Bronchitis.

June 17. 113.

Dr Martin,
Clock Hrs. Abingdon

Mrs ~~E. T.~~ 42. Church Farm - Radley.
Letter attached.

Bronchitis, 13 years ago began. Pains in left. Bad all day not tapped. Had fever - sneezes &c. lay in bed - make not much cough at the time. Cough ever since - never a week without it ^{but 2 or 3 days}. Coughs in arm. Very strong at night & dry $\frac{1}{2}$ pt. am about $\frac{1}{4}$ pt. Smells badly - always. Similar to *cotta* colour. never without smell. may be much worse. never any blood. once some years ago - a whitish bottle. Up ten o'clock full. Her health good. No loss in weight, no sneezes or fever. Sometimes a peasant staff

over a good deal. has E. 1.2.4. in July had vaccines prepared for the joint bones from the shoulder joint, made by Horde.

Looks v. w. good col. finger not ~~the~~ clubbed - at wrist 4 years now looks a little painful. Left wrist not much. Left index finger chest well formed. Little thin. Clav. prominent. Lungs clear in forey or percussion. air enters well behind no contraction on either side expansion seems good. Air enters well every where, no bubbling sides either on deep breathing or on coughing; no change in respiration note. right wrist is locked. Five years ago just had trouble with joints left wrist not stiff. Other joints a little affected

~~too swelling of~~ a little thickening of bones of arms.
To use creasite inhalation.

Very moist nose.

Feb 17th. Much the same - did get better in summer. Inhalation ^{3 weekly a glass day} steadily less violent. but not lately. Is taking radium water for the doses 10⁵ c.c. Radium bisulcate. 2 lots of vaccines. Once a fortnight. Dr Martin ^{20 gm 6 w.} treatment $\frac{1}{2}$ - only 3 weeks - not so harmful.

C Colour pretty good. - Looks thin; no fever. Clavicles are equal; expansion the same on both sides. Resonance very little defective over and above right clavicle. Everywhere else clear, but no change in respiratory murmur in front; sharp and distinct, but not tubular; no râles. Behind, everywhere clear; expiration not prolonged; no coarse râles. In the outer part of both lobes on coughing and deep inspiration a few crackling râles.

Epilepsy.

at 18 mos spent. baby - had convulsions 12 hrs. after that was paralysed in one side - for 6 mos. for & dragged the leg. recovered absolutely - (had been at day.) another ¹⁴ convulsi^s states lasted 7 hrs. another in 6 mos. less. lasted 5 hrs. 5 mos elapsed before rest one. 1910 at 9. dev sneezes the day after. Had had 2 this winter. one in Feb. (was not well. - 2 weeks before) before having convulsions & not active. lost ap. bowel trouble. so now with given no limb. reading 3 or 4 not very severe. Last we was in April - severe but did not last so long but so severe. went from one to another. & not during - sleeps between & long convulsions at hours. & after this one pain - half an hour & then some. vomits. & is. looks well. Yesterday. had an unprov. attack - was standing still & head dropped. & snatched. spoke then & was second time. better moment. Had him at Salet at Tonnet. or Widdmer. - tubes. treatment. Dr. Tissir - at Vevay all sladed with supper. & pills. changed to there at home. - and all gone it. - Dr. Tissir charged not April. or Widdmer thinks. not April. & in the bowel. After 2 w. or so. changed mind. send in bowel - fermentation. & caused it. Analy. fermentation. & pt. "abst. changed" curable - while to call the bowel & could cure in 1-2 years" diet. (now abatto. 2-3 of our abatto.). Slashed - cocoa gran. & sunbeak - creme de vigne. rice puerie & pt. & Macca - fruit & game an egg. - 5 mos. nothing but starch. - Said more. improv. child more nervous fainted. once. - 2 mos. - abatto. - the day mother left to go to Paris. July 7th visiting in Eng. changed diet. green veg. & eggs well. Yet. 2 weeks abatto. & as diet inc. is better a good diet. no change in starch. no spec bad odor. but no nucleus. - but fer. bad - Boronide since Feb. 2 a day. - has cut it out for a few weeks. - appetite - not large. eat at times. - get enough. runs in the abdomen. only we invent a day or rule - has passed marvellous - but this last well known. very bright. a normal. - no more of left arm.

Calom.

P.t.o.

Very healthy looking boy, good colour, well nourished; pupils are equal, react to light well, Throat fairly healthy, tonsils a little full.

Abdomen looks normal, no peristalsis visible, no special areas of distension; Liver is not enlarged, spleen not enlarged. Lower limit of stomach tympany just at the navel No special tenderness over the small bowel; large intestine easily felt, can be rolled under the finger; feels normal. head of caecum easily palpable. The right kidney is easily felt. Upper limit of liver flatness on 6th.

No difference between the sides of the face; the eye-brows are even, shoulders are level. The right arm is a little longer than the left, not noticeable when he puts his arms out; practically no difference on measurement. Not more difference in the hands than normal; no apparent atrophy or failure of developement of the left arm. The spine is straight; movements of the spine are perfect, His legs are even; movements of the legs perfect.

No difference between the two sides of his head. The chest is well shaped; no depression, no difference on percussion on the 2 sides. Marked increase in the of the right upper arm, not in the left; no difference in the muscles on the two sides. Heart sounds are clear at apex and base. Apex beat is inside nipple line, normal. Muscles good and firm.

Ch. Nut. depth. & hy. heart.

Sept 9/15 1912

Dr. Compton.

[REDACTED] 62. UX find.

c of respiration upright - not abt. of breath out wheezes - always sleep in left side - began wheezing & on rt side went "out in air" & worse too early. - had slight rheum. pain over knees. - not reg. pain. Cannot sit still. & pain in knees. (cannot rule out account for a cens. man). Eyes failing rapidly since mrs. born ang. - vision blurred. - palpable. dig. swol. Passes water but not freq at night & not more? Not abt. of breath - moves about. - asthmatic for years. not leuk in stools. alcohol. To 37 5 ozs. diet of beer - 6.9. a day. "Tuning up for port". Whiskey. Then for years. Tschelcher since 1887. Dried beer. In '96 found lumping in arms in bed. - but all right. Put in 9 after 1902 & sweater. Wearing down legs. 2nd in family. F. died arter. & knees. 66. M. of self of brain 54. B. 4. S. m. very dandruff. 4 ozs. 1/2 diet & 8 ozs. heart. Died of heart dis.

General nutrition looks good; perhaps a little pale; pulse regular, good volume. No swelling of the joints anywhere; no tophi. Arteries are not sclerotic; only just palpable. pulse tension is not increased. Apex beat is in 5th about an inch outside nipple line; visible, but not very forcible.

Chest is full, rather barrel-shaped.

Lungs are full, practically obliterating heart and liver flatness.

Soft systolic at apex, not obliterating first sound. Aortic second is not greatly accentuated. Soft bruit at base; no murmur in neck.

P.t.o.

Liver is not enlarged, edge is just palpable.

Spleen is not to be felt.

Glands are not enlarged.

No swelling of the feet.

Not tender behind in the renal region. Neither kidney to be felt.

In the sitting posture the apex beat is diffuse; murmur not more distinct.

Gen. appearance much better, colour good, pulse is regular, a little rapid, tension does not feel so high. Soft apex beat, aortic 2nd singing. Liver is not enlarged. Lungs, no wheezing. There are no tubercles either in front or behind.

Standing - no special change in heart sounds; no great accentuation of aortic second.

Mitral disease

Oct 20th / 1912

Had very bad arrm 2 yrs ago working in Home. - Hard work. Had never chills & heart bad - "ner centre spun out". But better lately. feel legs & head - have no harmony - helped. Of heart... no res trouble. No fever all life. non alt. has worked very hard. & intense. Chorea is never Rh.

1. Rest.
2. Orbita
3. Bowels. - sub
4. dell.
5. skin body .. hgs.

Looks pretty well, colour good, no cyanosis; pulse a little rapid, trigeminal rhythm, tongue clean; marked arcus in both eyes.

Wide spread cardiac impulse lifts the precordia & as high as first rib; in the lower sternum the shock is easily felt; no definite thrill; marked systolic at base carried along l.s.b. no murmur at tricuspid area. The systolic is propagated along l.s.b. and is heard faintly at the base.

Liver is not enlarged. No hepatic pulsation. No swelling of the feet.

Cohi - probably, Henochs

Dr Newcomer

Had

Jan/14

15. Haddeentarm

3 $\frac{1}{2}$ w ago seized with violent pain in abd & waist line - at rib - no vom but felt sick curled for 2 hr to night, no diarrhoea with it - very severe. Never like it before & last summer holiday - stool & shark, st ever been sick. In the 3 w. has had maz - no swelling today. Food no difference - only mult. - . No ill health or v. com this week - slight swelling tho' thin. But pains abdomen V. in Henre.. No pains in joints - no spots ^{moderately} ~~had~~ bed patches 5 years ago. was in bed 3 or 4 weeks. No harm there. no spots since... no hair.

Looks little pale and thin. Pupils dilated; tongue is little white. Abdomen looks natural; no distension. It is never low down; a little tender on pressure over the stomach. Liver is not palp. Spleen is not palp. Soft apex murmur. No swelling of the joints. Vaso-motor reaction is not very active. In the erect posture the systolic murmur is scarcely audible. Tonsils are not enlarge.

Hysteric + +

Dr Nine.

Feb. 6, 1914

Mrs [redacted]

32 Lexington

Headaches - for 3 years. not so bad until 3 1/2 ago.
Had them as child. - first worn 2-3 yrs - inf one day years
more for several - sometime up to a day. at times completely free
now a little. - Head to go to bed. Saturday - up bad. - Kept awake
at night. vomits - sometimes at time - now all over - began behind
eyes. Mother had ^{her} ~~bad~~ health. 51 ^{7 months} - then never - then at college
teaching. gave up a year ago - went to college. - 2 yrs last Easter
Dr Nine made give up - & began to have attacks - of nerves. Hand
wiff & neck - & breast bad. - wiff for an hour. Thumbs inside
& open a lot of hours - pain in hand. Feet not. but they ache a little
in morning they felt. Eyes close - 18 times off no change.
^{is about easier bad to bad attack - out 2 or 3}
had glasses worn since 7. - 2 bad attacks last week - One at
time had again ^{is about easier bad to bad attack - out 2 or 3}
11:30 at night. felt cold and tremble and - starting. & still
cannot elongate the feet forward - sometimes walking
I cannot & legs. Salvini attack 6:30 will faint & collapse, then in
over in bed & cracks. Dan & Pitt a few days. & then sit and very terrible legs and arms
bed in lack of tenderness of 1/2 days duration. (slips. worst period)
Starting began for a hour the 3 afternoons. (or 7 hours of sleep.)
Wakers in night of 1st. Very constipated - the rule. off - good. no
trouble. - Periods a week. no pain. I run in w. much
no use. - & around 13-14 lbs. - Sits. - could not play tennis - cannot
run.
I flushed - (2) winds nearly 31. pupils dilated. 1K f + +. 4 hrs
stomach symptoms not. however. 6. sat a bit stiff. but not drooped. and
cannot run. - & cannot - get up stairs well or down (if no walking (S))
not much pain at then - some in the legs. Pains in hands. & the day
after. No bad (if) to have eyes cleaned. no change in power of reading
(10) memory not so good. no rec of what has read.

Dilatation of Heart past infirm
Very remarkable case

Dr Cheale
Burford

~~██████████~~ ³⁰ Fulbrook Burford

not 36. as big-farted at 15 - in church - one or two
or three in a story till last year. ^{about} it noticed. Swelled last
April - right before his marriage. Legs swollen - and a swelling
under and for under who said - heart des. - May 4 years, suffused
un reg ill. - not high fever. seemed weak. In Dec. in bed ^{with} again
elt of breath - less swollen - last time better since. who called 7
weeks. See palpable. of elevated. not pale a liver a little st.
P. 108. C.R. no stem fever. when has diff. so that might be stem fever.

so in family - 2 sons all healthy.

Observe

He is a healthy looking man; good colour; not pale at all;
weighs about 11st. 7. Pupils are equal; tongue is clean;
marked throbbing in vessels of neck and beneath clavicles.
Visible pulsation in all the peripheral vessels. Marked
capillary pulse; marked Corrigan pulse in the arteries;
cardiac impulse diffused, in 5th, in and outside nipple.
Marked throbbing; the whole precordium heaves; transverse
flatness from outside sternal border to just beyond nipple.
Both sounds are loud at apex and at base. Loud intense
systolic at pulmonary area. Aortic second loud, transmitted
up the vessels; at the apex short diffused murmur.
Liver is not enlarged. ^{In sitting posture} cardiac impulse
^{visible} just under the nipple and a little outside
General throbbing not so marked and throbbing in the neck
not so marked. Sounds are clear at the base and the mur-

mur disappears at the apex; at the apex the sounds are very loud and booming. There is no enlargement of the thyroid. The superficial arteries are easily rolled under the fingers.

Pain in the intestines - first had it 2-3 days ago - not bad & went it
same thing - still worse last 6 mos. not bad it comes in all times usually
more at night, is in the centre. keeps awake - not wakes. eat 1 hr / left around
all night. Had a lump last night. Excr. h. good - not list or wear & get poorly
higher than 12 mos ago not much. See. no difference. has lived a quiet
the same. Pain dulls him & in an hour goes off like leave sore stiff
sharp will be sore for a couple of days. Otherwise very well.
Has weakness out in legs & arms. in cutting an apple as well
then. Comes when has the pain. will come out with the pain. will
come out in arms. sometimes ~~hand~~ - covered. never broken
in arms but in legs has ^{he was regular in all his} ~~hand~~ ^{as kind, unbroken,}
spots - always the same - on arms diff to legs - dropped, & red. when
on the legs smaller & broader. & will ulcer on arm. Eat red at
first. None had begun 18 mos ago. Had the colic badly before
enough. Always has bad tendency to itch always of hot.
endure the spots are raised & red & like hives. no other members have it.
one sister has it but in the intestine.

1. V - h. both man. - good & over. at Sung's Hospital. Sister
2. over legs old espina. - no fresh spots - few pancrea veins. many claire she can attacks of chia
3. arm above boucher of scabs & espina.
4. abd. soft normal. nothing the felt. - colon probable - a lot tender in L-1, L-2.
5. head & arteries normal.
6. urine clear.

Glo - pedal. circuit in a
colonie muscle.

Miss [redacted]

[redacted] woodford bridge. South end
Short circuit in vented. 30 Dec. 1912. for ch. circumspection formed
the item into top of rectum. Very bad with ch. con. could go 15 days.
was never one without granulation formed. 8-11 at time. now the same.
not well after vent. went to 6 stone. long time life. typhoid, fever inter-
mittently. no chill. T. to 103° - sun - 101° - Carter sweets off & on. Ordained
douches & then went on again. but perpetual 5 days or it is now. never
got round. my half comes away - one last stop as it was round.
x-ray shows. that it does. T-ray taken 13 Oct 1913 shows punch
in rectum. blunt end 2 1/2"! Then bed off 3 cm from valve.
& diverted below caecum. then passed over & later anastomosis with the
upper portion of rectum. Shaded above
cushion has gone - for 10 days could go days - & feel well then take
18 gr cal. & start - up & work & then had to use glycerine. still has
to use glycerine a tube. wh will att of 6' - 7' up at will and then
down by & will rest. Has now every day. would have it spontaneously
if when liquid as water. now almost no swell - was flat. albeit
swelling wh has a block. Colon fills up. - thing being bathed
no so. not lesser wt. at Lausanne & aged. & the 30 weeks. at each meal
& went with dozen of the a the diarrhea started all in the cecum
& went in small intestine. cut you off in left side. pedaling of
this. which open to the right side. the body.

She looks fairly well; colour is good; teeth are not very good. She has five spider angioma on the one hand, and one on the other. She is thin, but the muscles are fairly good.

Abdomen is a little distended in the hypogastric region; marked excavation between the ensiform and the naval.

Normal descensus of stomach. Fullness is equal in both fossae. There are marked B. Bor. in the lower abdomen. No special gurgling felt, and no coil of the descending colon felt running definite over brim of pelvis.

The head of the caecum is not felt; appendix not felt.

Liver is not enlarged; edge easily palpable.

Upper limit of stomach tympany on 5th, extends to just above naval.

Normal peristalsis heard in small bowel.

Heart sounds are clear.

Pulse regular.

Dr.

Mrs [redacted] 42. Skaggs castle, Co. Meath.

3 mos ago bad cold. after went in and occurs cons. but bad cont. and t swollen - would appear & in way & manner - pain like inter. of pth. swelled a more soft on rt side a noticed swelling in shoulder in slants. -- That could see - cold & numb. - an ache - a lump. 3 mos ago. Have cont. & all symptoms are - painful. swelling inside - not spec. but the lump seemed to get bigger. Came over here in Jan. stiff heel - broken hil. of bone. Dr. said. started by ch. but more deeper seated. to cause the trouble. an abs. of cor in both heels. 3 w laid up - then not. but this shoulder became so worse. in Jan. looked at most pyosteara. - shoulder affected "go & do nothing & have left out". Dr. Lewin Senners St. - ? celt. fist. & he tested - says much certain amount he has seen others & strongly against taking out. Went to Langatt throat who said nothing but granulation at the joint. & asked if adv - Rotherham in 55 up York. 1 hr. & very thorough. Had to call a train. Taken Cal. 10 day. 74 Dr. asked ab. diagnosis - absolute puzzled! swelling not there - a cold feather always now in cor. arm lame when for 5 - 6 hours cannot. left arm - a lead. Cont. feeling cold & deadness. - feel it now. - feels it in not in the shoulder blade - - feel it down the arm over. Gen h. gen. Hand in 3 years. still men. - say irregular - 2 odd stiff. wood dogs. No ch. in urine. - no change. Genl in family - 7 d. at 10. m. no h. H. 2. T. 2. w & sln. Fast.. no ver ill. not enter. no ch. drks yellow & no thyroid - skin very dry. -

1. To take Alkalies (2) Burnt lime. (3) So + Harrogate for a good treatment
(4) & over in sup. one table thyroid

She is a healthy looking woman; tongue is clean; slight puffiness of the eye-lids; no tophi, no swelling of the smaller joints. The skin is a little dry - no scaliness at all.

The Thyroid is small, not felt on either side.

Heart sounds are clear; no sign of enlargement; no forcible pulsation.

Pulse is reg., good volume.

Arteries not palpable.

Abdomen is soft. Liver not enlarged. Spleen not enlarged. No tenderness of either side.

The back looks natural; slight difference between the two sides; a little fuller in the right interscapular region, but the line of the trapezius on both sides is equal and the outline of the shoulders the same, but it looks a little fuller over the whole of the right scapula.

A little tenderness over the spine in the right interscapular region, and as one puts the hand over, a little deep fulness.

Has the same sensation on the left side; feeling of numbness and coldness, and distinctly tender on both sides of the spine. Can twist the spine, but feels a little stiff.

Can twist spine on either side; there is no prominence of any one of the spine.

Knee jerks are present.

Pupils are equal and react well to light.

Throat looks normal.

central. n.b.

19/4/14.

Mrs [REDACTED] Abingdon. (not cont)

In some line past had a languid - cut. tare ^{upper left} in chest -
on left side - up neck & shoulder ^{darnum}. has it every time or all day. but
after rest. in now for a year. not bad till recently. Flushing at head
but not always. blotten. ranc. sleep well. not expected. hiccups
& burbles... V. good health. till last year. Married 10 years. & children
in a string. Prolly good ch. good digestion but uncertain. yet heavy pulse &
finished fine after meals. don't weigh myself - not weighed. has got
hiccups. not since sept. no cough. - left arm feels heavy & she has stated it
^{for the last few months}. occas. numbness & tingling ~~down~~ back & inner ribs.

1. Flushed, heavily, but never looking unusual - cheeks very red - hands
red.
2. Heart normal. nothing in abd.
3. pulse above both clavicles. Left radial ^{pulse} a little smaller. a left brachial
not easy to feel - said, smallest.
4. Feels able cervical rib on left side - more marked on left. can
feel - also from.
5. To be subclavicular - high - & can be easily felt & seen.
6. Inner side of left arm looks smaller than usual. a tho
interosseous space between left & ring fingers on left side is very
much more distinct than on rt.
7. no distension. of sensibiliti - feels well.

~~[REDACTED]~~ aphasia?
nervous aphasia

5th Mar. 14

To Parkhurst

Lindau.

form of mental aphasia .. it me. can. slurred (day ⁱⁿ may)
5 mos. before began to feel it. Suddenly one sort of thinking -- says
words oddly. suddenly lower & lower a small stroke dumb. - & became
very uncompl. = Pyorrhoea. (loss teeth) - not badly. Loss of speech 2 years
ago. Other day, 1st talk - - 5 pm (it q. rest). - can speak. but with effort
Dr. says. Bruxia involv. - (dec 27. antibiotics - 4 months.) - better.

She sat here at 2¹⁵ & talked incessantly till 2⁵⁵ I could scarcely
get a word in edgways. She said she had nervous aphasia. It is
undeniably a case of a) natural high strung nature overtaxed, by
1 domestic worries - dual family 2) too many calls upon a
very delicate personality 3) the membranes, in which she is
present. (I did not examine her so she wrote me to see Parkhurst).

Heart Cases.

Mess ~~to~~ S. 26. West Field Street - York

Pain is of small spots - of small & play game out come a rash. in fact a over body. cover of cloth over a pins - heat a cause. Remorse. foul - cut takes it all of her.

2.3. Not was measles. at first. but all all after coming quickly with the spot. That measles. lasts - and are here a number days long. - always come in much a face & neck. white & red. begin as red. - one bad all all after day long see, here was all a swollen all over. has a neck a cold not swollen by ill. Swelled. had to go home in a boxy. - face so swollen double the size. a then caused. other very well. no pain. regular suppuration wth. heat. no swelling. but no doubt. not absorbed - many of us were caused. & had. come again. feel it cold at meaus. period. at Barmouth was better. some went on. If it goes up a plays off. & they come out a then they will not come up. bally aqua. of plays & red wind. Sums with hot talk.

slight sensitiveness followed. - Feels hot itchy not scratchy. not relieved by scratching. - Urine not right colored

1. Oct. 21 Blew up water. 21 eff Phorb. soda. 30. red. 21 eff. water. No pain. - & there is not well. Harrogate.

Ridge like or sand like almost like cracked person. - - size of 1/2 cm. last for days - and night worst. - But them begin this trouble. all day.

Oct 26. Remarkable - vertebra comes up at me - all over back. can see the spots come out. There is no increased V. m. mobility. scratching the skin - are red red line, no friction vertebrae to try Palm est. & Harrogate

Three brothers and one sister; nothing in the family. She looks well, good colour, always fresh colour; has walked quickly from Marston Ferry Road on purpose. One would not notice anything about the face except the high colour. It is a very fresh bright complexion, but there are not actual spots on the face. On the neck there is a rash of diffuse erythema, and there are numerous small raised white wheals, some of which go as high as the jaw. Over the chest there are a number of erythematous blotches. The whole back is covered with whitish wheals on a red background. There are none of them very large. It is general, all over, not localized in one place but worst about the mouth and neck. Some of the spots get bigger under observation. Did not notice special sensitiveness of the skin. On drawing a line with the nail there is at first an area of anaemia followed by a great deal of redness in the neighbourhood. No actual factitia urticaria. In front since dictating the note they have become more marked and are very intense over the shoulder. The pulse rate is good, no increase in tension. The heart sounds are clear. Has never had jaundice with it, never had any pain in the region of the liver. No liver trouble in the family; father and mother both well. There is no swelling of the joints, no enlargement of the liver, no tenderness over the gall bladder, which is not palpable. It is much worse on the trunk and on the arms than on the legs. At present it is marked over the abdomen. No enlargement of the lymph glands.

Argusia pectoris

- 2) go ahead with work - (3) Table as insulation with neck as trouble. -

Mrs [redacted] Swanage

56

2 y. complains of headache a nov. of getting a stroke - attacks in her head - pains & gets giddy. Little history. B. pres. 230... goes up. A lot of dyspepsia & has a pain about

R. b. w. nervous & wrong as dis... 43 rd step. of stairs - at 26. upon & pains - at 18 open - for breath. pulse. 7. t.t. on m. side fluctuates & at 76 a stroke. T. 54 d. of chill & fever. 2. s. no b.p.

About 2 y ago not walking & had a giddy fit now in brain & fell to wall & cold wall - at no time he fallen. Has had several attacks since more severe. Get opening & shutting in brain - & similar press in forehead.

b. beating in heart. & p. at 36 & now at 36 was not so at first. was 70. Pulse rate more rapid when up & got up & about rises to 48. Has had 3 giddy attacks - now a down sensation - when to his bed now - a dull feeling & legs go limp. & clutch at anything. diag. in Swan Dr Young 2 years ago.

She looks well, good colour, eyes are clear, no arcus. Pupils react actively to light. Tongue is clean. Teeth are good. Pulse is reg., 36 to the minute. No intervening small beat felt. It is markedly recurrent. Easily rolled under the fingers; with the blood out the artery is scarcely palp. The brachials can be readily

(Over)

rolled under the fingers. The carotids both pulsate; they do not feel specially sclerotic. No venous impulse in neck. Slight pulsation in external jugular vein. A.B. visible in 5th, looks little forcible. It is felt exactly 5ins. from the mid-sternum. The impulse extends over wide area in the interspace; does not lift either the 5th or 6th rib. There is a general jog of the front of the chest. The manubrium looks little prominent; skin is clear; no distended veins. Distinct impulse on manubrium; marked when she holds her breath. Lifts the whole of the front and the top of the chest.

Palpation: it is visible, fingers are lifted; there is a slow heave. It is more marked in the manubrium than in the middle of the sternum, where it is scarcely visible, and it lifts the sternal end of the clavicle on both sides. The finger in the sternal notch is lifted and a diastolic shock felt; no shock of either sound felt over manubrium, or of the heart impulse. A.C.F. begins on upper border of 4th, does not extend beyond right sternal margin.

Manubrium is clear on light percussion. On deep percussion not quite so clear. resonance in the manubrium as in the middle portion. Apex, systolic bruit propagated up left sternal margin, obliterates the first sound, second is audible. Both sounds are heard at the base; distinct systolic with the first, propagated up the manubrium. Second sound is accentuated. No diastolic murmur. The radials are equal on the two sides. The pupils are equal. Throbbing on manubrium is neither so vis. nor so palp in the sitting posture. After exertion no special difference

in the pulse, which remains at 36. Knee jerks are present.

Cardiac Hypertrophy.

Dr. Garrett, Not adelaide, May
July 29th /15.

Scl. for 3 $\frac{1}{2}$ yrs ago - right Rhen. stark fever. & had the erg. Herma rash. little blemishes on a rock. (or garnet of Kingston) spots out in crops. clusters more on face - hands raised in blisters on the back - & in feet - esp the legs - not in the body. Father first noticed that he heart was enlarged. not during the sc. fever. Since has been better. a sharp attack of under a Bladder at about 5. or 6 and easier said heart affected. Did not feel the heart. is suppose "spodges across the eyes" - not short of breath. Has not grown well is under a depression. has been fluctuant looks well. Pulse a bit irregular drops a beat. Father died 8 yrs ago dropped dead in the buffet - great smoker. was 45 - I had been a del. man. small man. 3 children. well a strong very under eight. This boy 5 $\frac{1}{2}$

Current case. - under eye usually looks bad. good under a b. just vs. below nipple. res. number in the skin right angle, humdole - def. much more so than obs. - no swelling in fm - by no chills. Shook of, or cold felt (3) vessels not palpable (4) no mur - at apex except when held breath a syst syst. - none at base. or in true region. - possibly some end of the heart but I doubt of val. disease.

To

21 Sculham Rd Banbury.

"I went out over about my heart" such a "trotter" 5 yrs ago
had pneumonia & inf. & was laid up a year. visited (Dr. Keelie)
at 10 A.M. saw Gray & Swindon & pass the Dr. at Sundown
saw at 2. (Dr. Swindon) who said heart was "all over the obst."
came home at 6 saw Dr. B. told him who was quite indignant
with except of a mucus beat not a greater heart to be found: & I told
him. Saw Dr. St. John & told me I said nothing wrong but
only worried. Went home & he came back in 14 days & then saw
Dr. Weston. Dr. Weston told him & said "heart all right"
sent home & told him come back in 4 days over 5 & we together. Came
again & told Dr. B. & Swindon & tell me for them nothing originally
wrong. Went to S. & told him a he was angry & chastised me for
worrying. Then Dr. S. & still held that heart was all over the obst.. Went
to Bank. wrote Dr. St. John who wrote to Swindon. In office under
Dr. Brooks for 14 days & he said no important signs all right
desch. went to Dr. Weston & Dr. St. John said messenger rats &
desch. went to Dr. Weston & Dr. St. John said messenger rats &
said not for him to pass an opinion. allowed to start work &
said not for him to pass an opinion. From that date till last week working
a shunting eng as from that date till last week working
night & day. 14 hrs a day trouble with heart: Dr. S. said heart
agreed but week & said not quite right.. says now & will
not let him run in main line. Now want selling smaller &
to let & right or wrong. - Last night worked all night
(V.H.W. 12) adren. not help. At first a bit like 31 a.m. in 3rd m & until 11. no
forehead-itch not. 4. Sunburn clear. a cracking in not sharp with blisters & no crusts
no all of sun. - Evidently from heat case.

D.A.H.

or history

(Mrs F. The Prinz, Glenelg,
Tasmania)

~~██████████~~ 21. 1st. 7.5 m. L. Aug. (Mrs F. The Prinz, Glenelg,
Tasmania) C. of Bradycardia. Dardanelles 25 apr to 10 July. was ill week in June
a death again 1st week in July. was enabled - for the heart. Has headache
+ short winded + sick generally. + bad " when at city". at Paragon
+ often 3 or 4 Alex. in small bark. + P. 26 Aug. There till Sept 14
got fully well. cold + Rh. came on. Heart. better. P. now abt 48
at Alexandra. Rest. at P. gained 25 lb. no dis about heart. not short
at Alexandra. Rest home. now all 25th nov. Regrettably dead.

Health: ~~Bad~~ home. now all 25th nov. Regrettably dead.
and suddenly came to.
1) V. b. bounding. p. 84 regular - a bit jolty + deceler. + in res +
is reverberating. 2) a b in s. diff. not atrial nipples line. No thrill
3. Tidley + weak. maximum a n b. reccurrent murmur along left stern
margin (and at post. 2nd left interspace. p. after 4 or 50.
Cordally still a little D-a-H. . .

July 20. 22. This is the first diagnosis of "D.A.H", that I
found in the records. Thomas Deane

Nerves.

Dr Schopfeld
Nov. 24/05.

Mrs. [redacted] in 30 & Belgrave Terrace Kensington

Nerves. - had a shull - Husband killed in war. SIst wife till 13
then start car spine + neck. long. lay down. later got stronger + all sorts
of things, walked - drained pressure. - For years seen ill. + had
doubt kidney - were told. both kidney drpt + this probly bled + stuck up with
great success. Had begun to get over before that. after that never absolutely
sharply - fears every thing - Had convuls + at night talk a child. Still
sharply. Sleep talk. mother sleep in room. - Dreams. - Bed weight 9.86
now not w. is much thinner. 25 stone. 2. - a day & hours - of greatest
misch. - last girl born May. older one 3. ~~better~~ ill while 9 mos. very bad
but will allow baby born. not nurse. F. H. not never in family. F. d. young
B.O. S; delicate. M. very healthy. always weak climate + no pain till after
triumph with son. had pain. Same only unless. now has it every day?
not persistent. but comes in long bursts. - a few mo. now. + set in recent
other places. On mercury touchable went - Vienna + got typhoid.
4 yrs ago. + then pain comes to diarrhoea - when eaten we get. till
last 3-4 mos. or 8 or 10 always very liquid. Then when come back from
hemp 3-4 mos. or 8 or 10 always very liquid. Then when come back from
timber. same feel in diet. away to surly. about nerve. Had swelling
of thyroid. good. not cause much. pain but come 3-4 hrs. is heat from
+ rubulon.

Erythema.

Dr Wagner & Gibson
July 24/16
Dr Cushing

~~Miss H. [redacted]~~ 10. Fifehurst Rd Reading

Somerset Rd. walking all school 3 terms. who ate
meats. pink eyes a sneezed thumb. went back & walked
with T. 102° red arm. April 5th. Had F. regular.

~~on return~~ Erythema - color rash. in 4th day or latter came - right.
1st. eyes swollen lids ^{very} ~~swollen~~ on arm. right set. a few purple
carried 3 days a few faded purple. no trouble with lids or hands
pulse in left arm stopped & has not come back since. Home
in 10 days. Been getting well - returning to care was a bit
& began walk back - took him to Eric Butcher. said cat
was 60. Pulse irregular. went back all right in Butcher

other ch.
8 - all
Paroxysms
regularly. Had
spell in
sleep 6th
came but
not.
Spent all his life - began at 3. & continued. nelle rashi
recurred attacks - has them when in good health. yet
purpled a day & then faded.

2. colic pains in abd. - a few severe ones - with vomiting
no diarrhea - no blood.

3. Had bad T. at home

r.h.l. good color 1) Tongue bit colored. 2) no ulcers & blisters
3) a few faded spots in eyes 4) neck clear - will part &
after 4 weeks. 5) spleen & liver not enlarged 6) 2 small metastases
& abd. dem. one testis has not come down. P. Blood
and - pro.

relax.

Dr S. G. C.

~~Mr. H. M. 49~~ Take Doctor Hume. I live in the world
as you do. (riding) felt pain across chest - pain no other. &
burned at night. style could not find any thing. Thought
burnt himself. Yesterday went to style again nothing wrong
but himself. am. worse had it in m. a. t. night. sharp. a made several
wet. am. worse had it in m. a. t. night. sharp. a made several
more pale or faint. Then was out hunting in bushy - went quickly
& going along found big one - & for moment were made the
big jump. Sudden hard pain even after jumping the few
days later. pain, very many a day had a fresh burn got in a
burned & so the dashed across field as hard as could go & pain
went. at m. Sat. night bad again - sitting wrong & then came
num of slants ran up & got pain a little - went more faster
& then something not quite.
& then something not quite.
... w pain last night.

wound " .
7. H. good. P.H. v. h. m. no sore ul. sc per fed at 39. Had nodes
on. rev. burn. Et deal of green. Burned heart hard. Holes
walking 2. - 3 hours a day. cracked hand first two days of rest.
v. h. smother 2 in. cigar 1 1/2 in.

1) v. h. m. (2) no rashes. (3) not end of the heart (4) sound clear. but
recur - esp syst mit. (4) aortic not clear. not accent. (5) gen.
arteries - not stiff. No puls. 130. - are not cut.

ad

V. h. m. 9. F. H. in oct... no ver illnes. Dague fever in Egypt. in Aug

2 mos. S. 20 - 9. 20

P.J. 3 years not cut walking in Oct. could not hold a stick so painful
very suddenly. not even black. ached. No cold wind. but all all
lasted 14 days went into little finger - blue afterwards. a doctor said
to be shot to be of arsenic. never change in that finger since.. & it
got well. came in again the next winter not the 3rd finger & was
bad & an abs under nail. got better in 2 mo. But winter same
as 1. & he was bad all last winter & broken skin under nail &
stayed bad all summer. no pain, & not very blue. The finger & 2. last
winter. This summer. etc. treated same as before. a bad Aug. no
bad, & 1 or 2 am reverse pain could not been - nothing else
& continued 3 or 4 fingers, & aches. unless could look Valley
& bad under the nail. Never all fingers never in the hand
but - number of times. nothing in liver. undoubt wind & cold
& sun stroke every am.. & numbness at 4 am.. weight 11. 00
feels well. every day. 1) V. h. m. 2) ait. a bit the 11. (3) heat off 4. L has
numb. 3) Indent pink scar under nail which is small. & rubbed.
whole left. When is red. burns & frequently painful. but to say it
is subsiding, that - may be a bad all last winter. bad till
now since August. looks bad - colour 3 weeks ago only trouble is
not so bad. finger a scar under nail. - very little & doesn't mind
nothing in feet.

1) too go in with. Check (2) leg open the foot & the end pur. & not even
an inch during till his well.

Chronic Purpura.

Oct 25/16

Bethel

~~Heath~~ Miller 36 Cottontown Northern.

w. as child... more bleed at s. & body.

Treats: removed 1880 no bleeding. 1893 - began to bleed body. - 5 years & more... spots began 1904, every year since. never free. for mos. Body for 5 yrs now. not for last year. not bleed. no severe colic except one this spring - had three fits. & vomited, no other

- 1) deb. looking. 2) purp. on forehead & cheeks. 3) gums swollen. 4) no appetites. 5) many bruises on arms & hands. 6) very bog iron in legs. often at knee - by - fallen of hand... 7) no red of spleen. 8) no anemia

Aortic Insufficiency.

Dr Southam

Dr Rice

May. ~~18~~ 1913 37 army ord dept.

H. & 1913 - 2nd before 11-12 years of cordite exp. small
worn cutting cordite. had slight pain for over months cordite
head on Aug 13 - paroxysmal left side suddenly - could not
walk or sit up & 6 or 7 feet could walk. (Dr Holdane &
Brookdale) Dr Eulland saw him - got well but still seen left hand
stiffly & slight feeling in left leg. - Walked at 11 am May 15 14. On
Aug 14 hand worse & slight relapse. slight pain in same hands
not able to hold nor move but arm. sleep fit sleeping. That
is more or less permanent - very slight but there. does not hurt
unless a shock. Came to Ord Dept in June at night & then b.
Talcum powder & 2nd followed attack - led off by dead faint
in tent & had to get out. then partly better. could not
use left hand (1st & 2nd man) - for weeks. could walk about
house never ran but walked like drunk. left side up. while
at Talcum powder in bath one day slight loss of power in right
leg. - & quite definite lasted a week. no headache. leg well
otherwise. not lost in we. but in excuse.
11th no signs. Bassett neg. T 7-1902. meas &. Testes not much

H.C.W. good physique. pupils equal.
reach to light. muscles face more well.
J. straight - feeling perfect. L.a. the largest.
all movements perfect - grasp is good - sensation
is good. stands on toes & heels. all movements of
legs perfect. knows all the movements.
knows what is hard - K.j. + + .
says he fumbles with his hands. walks his
boots well - no toe or ankle reflex -
achilles + - articular radicles palpable -
Tarsion + - radials recurrent - brachial
very firm. Temp: palpable & tortuous. ap: bt. below & just
inside nippel - lifts reflexes. Convex clear. apex & base -
slt aortic stuff. Cg. tone. 2nd loud. heart not enlarged. spleen
is just palpable.
